As the more important monuments of architecture in Damascus have already been mentioned above, a few general remarks on the interior of the city will suffice. As in all Oriental towns the usually blind alleys of the quiet residential quarter with their bleak high walls, which often however enclose veritable palaces, form a striking contrast to the streets of the bazaars always busy and full of colour, with their huge khāns, the offices and warehouses of Eastern merchants. One great advantage the town has over others is its inexhaustible supply of running water which the Baradā supplies. It is no wonder then that the baths of Damascus, often splendidly decorated with faience work, enjoyed particular renown. Wetzstein gave a delightful picture of the picturesque scenes in the markets of the city about the middle of last century in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, xi. 475—525. If the city has since lost some of its real Oriental character, it has nevertheless remained purer than in the other great cities of the east which have been more influenced by European cosmopolitanism. The old established industries of Damascus have however declined considerably. The armourer's art, which is usually traced back to the armouries founded by Diocletian, has been extinct since Tīmūr carried off those who followed it. The once world-famed silk-looms (cf. Idrīsī *op. cit.*) have, it is true, not entirely disappeared but they have quite lost their former importance. At the present day manufactured goods (particularly cotton-stuffs) hold first place among imported articles. On the other hand many craftsmen still supply good and well made articles for native use. The leather work is particularly well known. The goldsmiths make pretty filagree work while the wood and metal (copper, brass) inlaid work find a ready market in foreign countries also. Though the town has irredeemably lost its erstwhile importance as the capital of a great empire and a centre of the world's commerce, it by no means lives solely on its glorious past and we may well concur in M. von Oppenheim's verdict that "a new era of prosperity is clearly dawning upon it".

Deutsch. Pal.-Vereins*, viii. 8 *et seq.*, 130 *et seq.*; Ibn Djubair (ed. de Goeje), p. 260—298; Yāḳūt, *Mu'djam*, ii. 587—598; Ibn Baṭṭūṭa (ed. Defrémery et Sanguinetti), i. 187—254; Ḥādjdjī Khalīfa, *Djihānnumā* (Constantinople 1145), p. 571 *et seq.*; G. Le Strange, *Palestine under the Moslems*, p. 224—273; H. Sauvaire, *Description de Damas*, in the *Journ. As.*, 9. série iii—vii. Numerous works in manuscript specially devoted to Damascus, particularly Ibn 'Asākir, have unfortunately not yet been printed; but even the available sources have not yet been systematically utilised; indeed the topography of modern Damascus has not been thoroughly studied. The publication of the inscriptions of Damascus announced by van Berchem will supply a new basis for investigation. A. v. Kremer's old, in many places erroneous *Topographie von Damascus*, i. ii.: *Denkschr. der phil.-hist. Cl. der k. Akad. d. Wissensch. Wien*, v. vi. (1854 *et seq.*) is still quite indispensable; cf. also Quatremère in Maḳrīzī, *Sultans Mamlouks*, ii. 1, p. 262—288; A. von Kremer, *Mittelsyrien und Damaskus* (Vienna 1853). For the conquest of the town by the Arabs s. de Goeje, *Mémoire sur la Conquête de la Syrie*[2], p. 82—113; Caetani, *Annali dell' Islām*, iii. 326—422. The older travellers have been utilised in Ritter, *Erdkunde*, xvii. 1332—1428. See also more especially J. L. Porter, *Five Years in Damascus*, i. 24—148; H. Petermann, *Reisen im Orient*, i. 44—174; Lortet, *La Syrie d'Aujourd'hui*, p. 567 *et seq.*; M. von Oppenheim, *Vom Mittelmeer zum Pers. Golf*, i. 49—77; Baedeker, *Palestine and Syria*[5] (1912), pp. 298—322. (R. HARTMANN.)

DAMIETTA, a town in Egypt 12 miles south of the mouth of the eastern arm of the Nile. Damietta, Arabic DIMYĀṬ, also popularly pronounced DUMYĀṬ, has at the present day (census of 1897) 31—32,000 inhabitants and is the capital of the gouvernement (*mudīrīya*) of the same name, which has 43—44,000 inhabitants. In spite of the railway, post and telegraph it is at the present day a moribund town and only holds the tenth place among Egyptian towns as regards number of inhabitants. In the middle ages on the other hand Damietta was a florishing industrial centre and an important seaport, the importance of which may be recognised from the fact that when it was besieged by the Crusaders in 616 (1219) Malik Kāmil was ready to restore the kingdom of Jerusalem as it existed before Saladin's time to save Damietta, an offer which was however refused by the Crusaders. When the period of Damietta's prosperity began, cannot be exactly determined. In Coptic sources it is called Tamiat or Tamiati, a name which it is said to have received from a son of the legendary eponym Ushmūn b. Miṣrayim. Nothing further of the pre-Islāmic town is known.

The history of the conquest also, in which a relative of Muḳawḳis plays an important part (Maḳrīzī, *Khiṭaṭ* i. 213 *et seq.*) strikes one as even more legendary. Al-Miḳdād b. al-Aswad is said to have been its conqueror. The exposed

situation of the town was responsible for the fact that Damietta, even after the final occupation of Egypt by the Arabs, was repeatedly the object of hostile attacks and suffered much from the Byzantines and afterwards from the Crusaders. The town was, for example, thus suddenly attacked in 70 (708-709), 121 (738-739) and in the beginning of the third (ixth) century. An assault on it in the year 238 (852) induced the Caliph Mutawakkil's government to fortify Damietta. After a century of peace the town was again disturbed by the Byzantines in 357 (967-968) and two centuries later devastated by the Normans of Sicily (550 = 1155). The fights for Damietta, best known in history, are however episodes of the Crusades. It was recognised by the Christians that the possession of the Holy Land could only be secure if Egypt, the great bulwark of Islām, were overthrown. It was with this end in view that the expeditions prosecuted so vigorously against Damietta were undertaken; the first of these was a joint attack by the Byzantines and the kingdom of Jerusalem upon Saladin who had just come into power (565 = 1169). The second expedition was one led by Jean de Brienne, King of Jerusalem, (615—618 = 1218—1221) against Malik ʿĀdil and after the latter's death against Malik Kāmil of Egypt. Damietta fell after fierce fighting but was soon afterwards retaken by Kāmil.

An equally ill-fated attempt was made by Louis IX, on his Crusade in 647-648 = 1249-1250. These events took place just as the suzerainty of Egypt was passing from the Aiyūbids to the Mamlūks. To render such occurrences impossible in the future, Damietta was destroyed in 648 (1250) by the Mamlūks. The whole town was razed to the ground except the mosque which alone was left standing. A new unfortified town arose farther to the south. In 659 = 1260-1261, Baibars al-Bundukdārī made the mouth of the Nile at Damietta impassable for ships. In the period of Damietta's prosperity the entrance had been barred by a chain. The new Damietta immediately adjoined the old town. The former Chief Mosque of Damietta, which dates from the period of the foundation of the town, the Djāmiʿ Abu 'l-Maʿāṭī or Djāmiʿ Fataḥ, still survives in a ruined suburb lying to the north of the modern Damietta, as Salmon has demonstrated beyond all doubt. The site of the ancient Damietta is also thereby defined, a problem for which various solutions have been offered on historical grounds. It was not till the French period that Damietta again began to play a part in history. After Napoleon's return, Kleber defeated a Turkish force which had landed here, on the 1st November 1799. The English afterwards occupied it and then returned it to Turkey.

While the modern Damietta has only a few unimportant industries (weaving of coarse linens, sugar, salt fish, and potteries), in the middle ages it was a centre for the export of the textiles manufactured there. The linens called Dimyāṭī (also Sharb, Ḳaṣab etc.) were famed throughout the Muḥammadan world. Only white stuffs were manufactured in Damietta but in the neighbourhood coloured cloths were also made (Yāḳūt, *Muʿdjam al-Buldān* ii. 604, 8). An admixture of gold thread was very popular and silk, which had to be imported, was applied in many ways. These industries were carried on by the state as well as by private individuals. The work was done by free men (Christians) who were quartered in the factories and worked up a given amount of material allotted to them (cf. the article DABĪḲ; for further information see C. H. Becker, *Beiträge zur Geschichte Ägyptens*, iii). This industry was at its zenith in the Fāṭimid period. It did not survive the wars and turmoils of the Aiyūbid period and had perhaps disappeared or lost much of its importance even before Saladin's time, but we have no details on this point. At the present day only a few miserable remnants of the ancient industry remain. The decline of the town was sealed by the making of the Maḥmūdiya canal (1816) which diverted trade to Alexandria.

The remaining literature will be found in the important study by Georges Salmon, *Rapport sur une Mission à Damiette* (*Bulletin de l'Institut Franç. d'Archéologie Orientale au Caire*, ii. Mai—Juin 1901).

(C. H. BECKER.)

ḌAMĪR, a technical term of Arabic grammar: the personal pronoun. The term *al-ḍamīr* or *al-muḍmar* is really elliptic for *al-ism al-ḍamīr* or *al-muḍmar* "the implied name" in opposition to *al-ism al-ẓāhir* or *al-muẓhar*, the explicit name expressed by a substantive. It originally denoted not the personal pronoun itself but only the substantive represented by it (cf. Fleischer, *Kleine Schriften*, i. 161). Sībawaihi therefore does not call the personal pronoun *ḍamīr* or *muḍmar* but *ʿalāmat al-muḍmar* or *ʿalāmat al-iḍmār* (see for example, Derenbourg's edition, i. 188, 4 and 329, 20).

The personal pronouns are divided in the later Arabic Grammar, of which al-Zamakhsharī's *Mufaṣṣal* is the classic, into independent (*ḍamīr munfaṣil*) and dependent (*muttaṣil*). The former are the separate or independent pronouns *ana*, *anta*, *huwa* etc.; the latter include primarily the suffixed pronouns of all three cases (*faʿal-nā*, *ḍāraba-nā*, *raʾā-nā*) but also the merely virtually existing pronouns like the *huwa* in the form *faʿala* etc. A pronoun of the latter class is called *mustatir* (invisible), in opposition to the suffix which although dependent is actually existent (*bāriz*). A variety of the *ḍamīr al-mustatir*, the invisible personal pronoun, is the *ḍamīr al-fāʿil*, the inherent pronoun, which is however not as a rule expressed, as for example, the subject of the first and second persons of the verb.

In Sībawaihi this terminology is not yet developed. He only distinguishes between an implication (*iḍmār*) which actually finds phonetic expression (either by a separate personal pronoun or by a suffix) and one which is not so expressed (cf. particularly i. 188, 4 and 5, and ii. 318, 1, 320, 11 and 322, 11). But he already has expressions for the first, second, and third person (*al-mutakallim*, *al-mukhāṭab* and *al-ghāʾib*; in place of the latter also *al-muḥaddath ʿanhu*).

As regards syntax, the personal pronouns have given rise to a very subtle distinction among the Arabs, which trenches on a theory of knowledge. Even Sībawaihi (i. 188, 3) says that the personal pronouns are always determined, "because a noun can only be implicitly referred to when one knows that it has been made clear to another whom or

what is referred to and that one is referring to some thing definite". Doubts as to the antecedents of personal pronouns (to which as genitives the possessives also belong) can only arise in cases like the following *adalla badawiy^un nāḳat^ahu* (a Bedouin lost his she-camel) and are here practically cleared up (for further information on this debatable point see Ibn Yaʿīsh, p. 683). But even on this point the Arabs have found the correct view, viz. that *-hu* in a case like this is still determinative although it refers to an indeterminate noun for it cannot refer to any Bedouin but only to the one just mentioned (*loc. cit.*, l. 11).

It should be further noticed that our demonstrative and relative pronouns are not considered by the Arabs as one class with the personal pronouns but form a separate class by themselves, that of the *mubhamāt* [q. v.].

al-**DAMĪRĪ**, MUḤAMMAD B. MŪSĀ B. ʿĪSĀ KAMĀL AL-DĪN, was born at Cairo in 750 = 1349 (but the date is doubtful) and died there in 808 = 1405. His *nisba* is derived from the northernmost of the two towns both called Damīra near Samanūd in the Delta (*Khiṭaṭ djadīda*, xi. 59). He was a Shāfiʿite, a pupil of Bahāʾ al-Dīn al-Subkī (d. A. H. 773; Brockelmann, ii. p. 12), to whom he acted as famulus, and of Djamāl al-Dīn al-Isnawī (d. 772, Brockelmann, ii. p. 90). After at first gaining his livelihood as a tailor, he became a professional theologian and taught with reputation the normal branches of *tafsīr*, *ḥadīth*, *fiḳh*, philosophy and belles-lettres at Cairo in the Azhar, the Djāmiʿ of al-Ẓāhir, in the Ḥusainiya and elsewhere. He held a devotional lecture (*mīʿād*) in the Madrasa of Ibn al-Baḳarī, inside of the Bāb al-Naṣr, having been appointed to it by the founder (Maḳrīzī, *Khiṭaṭ*, i. ed., ii. p. 391 = ii. ed., iv. p. 236). He was also in charge of the course in *ḥadīth* instituted in the Ḳubba of the Khānḳāh of Baibars Djāshnakīr (Maḳrīzī, i. ed., ii. p. 416 = ii. ed., iv. p. 276; Ibn Shuhba, *Ṭabaḳāt*, in Wüstenfeld's *Aerzte*, p. 17). He made the pilgrimage several times and taught at Mecca; one of his pupils told that he heard him in the interior of the Kaʿba. As one of the Ṣūfī brotherhood of the Khānḳāh, in the *Dār* of Saʿīd al-Suʿadāʾ (Maḳrīzī, *Khiṭaṭ*, i. ed., ii. p. 415 = ii. ed., iv. p. 273 *et seq.*), he was celebrated for his ascetic life and for his preaching; al-Maḳrīzī, a younger contemporary, tells us in his *ʿUḳūd* that he used to go to hear him with admiration and frequented him for years. *Karāmāt* were ascribed to him also, and after a youth inclined to gluttony, he became almost a perpetual faster. The great majority of his works were of the conventional commenting, epitomizing, versifying kind, and seem mostly to be lost. Thus, he wrote a commentary, derived from al-Subkī, on the *Minhādj* of al-Nawawī (Brockelmann, i. p. 248) and in it has the remark that some held that the *Maḳāmāt* (Ḥarīrī's apparently) and *Kalīla wa-Dimna* were allegories of alchemy. He left also sermons (*khuṭab*) and treatises on canon law in *radjaz*. All these were in the way of his profession, but his great work, the *Ḥayāt al-Ḥayawān*, by which he is known in the east and the west, was evidently a labour of love in spite of his disclaimer in the preface of *fiṭra*, or natural faculty for such an undertaking. The book is a zoological dictionary in which the zoological element is minimised. The names of the animals are given in alphabetical order, and all the longer articles extend to seven sections. (i.) Philological, derived from Ibn Sīda, Djawharī and Djāḥiẓ, Damīrī's predecessor in writing a *Ḥayāt al-Ḥayawān*. (ii.) Description of the animal and its habits. (iii.) *Ḥawādith* mentioning the animal. (iv.) Its lawfulness according to the different schools of canon law. (v.) Proverbs bearing upon it. Maidānī is used mostly. (vi.) Medicinal properties of its different parts. (vii.) Its meaning when occurring in dreams. The result is an enormous compilation, full of digressions and almost unreadable consecutively, but a store-house of folk-lore, tradition, popular medicine and racial psychology beyond all praise. Very frequently Damīrī had no knowledge at all of the animals on which he was writing, but he had an immense knowledge of what had been said about them and all that he brought together with scrupulous care but in bewildering order. The book exists in three recensions, a long, a short and an intermediate, of which fortunately the long one is that which has been printed — at least at Būlāḳ and Cairo. There are also abbreviations, and a Persian and a Turkish translation. For these see Brockelmann, ii. p. 138. It is being made generally accessible in an English translation by Colonel A. S. G. Jayakar (London & Bombay: 1906, 1908) which has reached *Abū Firās*, having covered more than three-quarters of the whole.

Bibliography: Besides the references above, Wüstenfeld, *Aerzte*, N°. 265; Leclerc, *Médecine Arabe*, ii. p. 278; introduction to Jayakar's translation; *Encyclopædia Britannica*, ix^th ed. (much fuller than xi^th).

(D. B. MACDONALD.)

DAMMA the name of the sign for the vowel ◌ُ (also *u*, *ū*) in Arabic. The sign is originally an abbreviated wāw (cf. the article, ARABIA, ARABIC ALPHABET, p. 384). The sound expressed by Ḍamma is called Ḍamm *i. e.* "contraction" (of the lips), rounding of the lips. The Arabs therefore correctly recognised one feature of the formation of *u* and *o*. Cf. also A. Schaade, *Sībawaihi's Lautlehre*, p. 24. (A. SCHAADE.)

DĀNAḲ, DĀNĀḲ, (Pahlavi, *dānak*, Pers. *dāna*, "corn"; cf. Pahlavi and Pers. *dāng*, Arm. *dank*, *dang*, Old Pers. *daniya*) a small weight and coin, the sixth part of a *dīnār* or of a *dirham*. Among the Meccans, the *danāḳ* was in the pagan period a weight of 8⅔ *ḥabba* (barleycorns of average size); afterwards it was worth 3⅓ *ḳīrāṭ* = 10 *ḥabba* (barleycorns) = 40 *aruzza* (grains of rice). In Spain it was as a rule worth: 2 *ḳīrāṭ* (Casiri, *Bibl. Ar. Hisp.*, i. 366 and also Golius).

Bibliography: H. Sauvaire, *Matériaux pour servir à l'histoire de la numismatique et de la métrologie musulmanes*, in the *Journ. Asiat.*, viii^th Ser. xiv. 526; xv. 247; viii^th Ser. iii. 412, 413. (CL. HUART.)

DANĀḲILA, sing. DUNḲULĀWĪ; an inhabitant of Dongola [q. v.].

al-**DĀNĪ**, ABŪ ʿAMR ʿOTHMĀN B. SAʿĪD B. ʿOMAR AL-OMAWĪ, born at Cordova in 371 = 981-982 is best known by the name of Abū ʿAmr al-Dānī (of Denia) as he lived for long at Denia, in the province of Valencia. I began my studies, he tells us himself, in 385 (var. 384, 386,

387) at the age of 14 and set out for the east on Sunday the 2nd Muḥarram 397 = 29th Sept. 1006. After spending four months at Ḳairawān I entered Cairo in the month of Shawwāl of the same year. In 398 (= 1007) I left Egypt and went to Mecca and Medina to perform the pilgrimage. I spent the most of these two years in study and returned to Cordova in the month of Dhu 'l-Ḳa'da 399 = August 1009.

In order to escape the turmoil which was then raging in the latter town, he betook himself to Almeria and then to Denia where he died on Monday the 14th Shawwāl 444 = 8th February 1053; he was given a pompous funeral; the prince himself walked before the cortège.

Among his teachers in Cordova, Ecija, Pechina, Saragossa, Kairawān, Cairo, Mecca and Medina are mentioned: Abu 'l-Muṭarraf ʿAbd al-Raḥmān b. ʿOthmān al-Ḳushairī, Abū Bakr Ḥātim b. ʿAbd Allāh al-Bazzāz, Abū ʿOthmān Saʿīd b. al-Ḳazzāz, the Ḳāḍī Yūnus b. ʿAbd Allāh, Abū ʿAbd Allāh Muḥammad b. ʿAbd Allāh b. Abī Zamanīn, Abū Muḥammad Ibn al-Naḥḥās, Abu 'l-Ḳāsim ʿAbd al-Wahhāb b. Aḥmad b. Munaiyir b. al-Ḥusain al-Khashshāb, Abu 'l-Ḥasan al-Ḳābisī etc.

His pupils were: Abū Dā'ūd b. Nadjāḥ, author of the *Kitāb al-Tanzīl fi 'l-Rasm*, Khalaf b. Ibrāhīm of Toledo etc. etc. A Mālikī jurist, Abū ʿAmr al-Dānī is everywhere credited with having immense knowledge of all the sciences connected with the Kor'ān and the Ḥadīth. His life was irreproachable and his education admirable; according to his biographers he also possessed a prodigious memory such as none of his contemporaries could claim to have.

At Denia, he formed a friendship with the ruler Mudjāhid, the Mugetus of the early Christian chroniclers, who had a decided leaning for the sciences studied by Abū ʿAmr al-Dānī.

Out of more than a hundred works from his pen enumerated by him in an *Ordjūza* we now possess only the following:

1°. *al-Taisīr fi 'l-Ḳirā'āt al-Sabʿ*, a treatise on the seven texts from the *Ḳor'ān* which it is permitted to recite in prayer (Berlin 570—89, Gotha 550, Brit. Mus. Suppl. 84, Algiers 367, 368); — 2°. *Djāmiʿ al-Bayān fi 'l-Ḳirā'āt al-Sabʿ al-Mashhūra*, on the same subject as the preceding (Bibl. Khed. i. 94); — 3°. *Kitāb al-Muḳniʿ fī Maʿrifat Rasm* (var. *Khaṭṭ*) *Maṣāḥif al-Amṣār*, treatise on Ḳor'ānic orthography. (Berlin 419, Vienna 1624, Paris 593, Brit. Mus. Suppl. 88); — 4°. *Kitāb al-Idjāz wa 'l-Bayān* (var. *Idjāz al-Bayān*) *ʿan Uṣūl Ḳirā'at Warsh ʿan Nāfiʿ*, a treatise on the principles of reading the Ḳor'ān by Nāfiʿ b. ʿAbd al-Raḥmān after his pupil Warsh ʿOthmān b. Saʿīd (fragment, Paris 592 3); — 5°. *Kitāb al-Tahdhīb fi 'l-Ḳirā'a* (St. Sophia 39); — 6°. *Kitāb al-Taʿrīf fi 'l-Ḳirā'āt al-Shawādhdh*, a treatise on the different ways of reading the Ḳor'ān which divided the pupils of Nāfiʿ: Isḥāḳ b. Muḥammad, Ismāʿīl b. Djaʿfar, ʿĪsā b. Mūsā and ʿOthmān b. Saʿīd called Warsh (Alger 367 4); — 7°. *Mufradāt al-Ḳurrā' al-Sabʿa*, treatise on the peculiarities of the seven readers of the Ḳor'ān (Bibl. Khed. i. 114); — 8°. *Kitāb al-Muktafā fi 'l-Waḳf wa 'l-Ibtidā*, a treatise on the rules of the pause; — 9°. *Kitāb al-Idghām*, a treatise on vowel contraction.

(MOH. BEN CHENEB.)

DĀNISHMANDĪYA. The Turkoman dynasty of the sons of Dānishmand originated, according to Oriental authors, in Malaṭya (the Melitene of the Byzantines) and traced its descent from the Arab Ćid, Baṭṭāl Ghāzī [q. v., p. 680] who fell in 740 in battle with the Byzantines; according to Niketas (Bonn edition), p. 45, they were of Arsakid descent. Their ancestor, Malik Dānishmand Aḥmad Ghāzī, invaded Asia in alliance with and in the train of the Saldjūk Ḳilidj Arslān I. and founded an independent kingdom there, which in addition to Sīwās, their capital, included the towns of Amasia, Kiangri (Gangra), Čorum, Niksar (Neocaesarea) etc. within its borders. He also ruled over Ablastān (Elbistan) and Malaṭya (Hazārfenn, Ḥādjdjī Khalfa). He died, according to Abu 'l-Faradj, in the year 1104 A. D., in 1100 according to Armenian authorities, while according to Hazārfenn and the coin in the Ottoman Museum (Aḥmed Tewḥīd, N°. 101) his death must have taken place some years earlier (in 1084 as Casanova presumes). He was succeeded by his son Malik Ghāzī (Amīr Ghāzī on his coins and in Armenian sources; Gümüshtegin in Abu 'l-Fidā and Münedjdjimbashi; Malik Ghāzī Muḥammad in Hazārfenn and Ḥādjdjī Khalfa, the latter confuse him with his son Muḥammad and make one individual of them). If the earlier date given for his accession be the correct one, it was Malik Ghāzī, who in 1097 A. D., in alliance with Ḳilidj Arslān I., repeatedly attacked the Crusaders on their march through Asia Minor under Godfrey of Bouillon (on these battles, cf. the *Alexias* of Anna Comnena, ed. Reifferscheid, ii. 111, where he is called Τανισμὰν ὁ σουλτάν) and in 1100 took prisoner Boemund of Antioch at Malaṭya (Danisman in William of Tyre, Doniman in Albertus Aquensis). He was afterwards engaged in fighting the Byzantines from whom he captured Kastamonī, the capital of Paphlagonia, shortly before his death (Kinnamos, p. 13 *et seq.*; Niketas Chon., p. 25 *et seq.*). Ewliyā credits him with the conquest of Gümüsh, Čorum and Bor (ii. 405, 407; iii. 189), but according to Hazārfenn they had been already taken by his father. Muḥammad, the son and successor of Malik Ghāzī, came to the throne about 1126, — to follow Kinnamos and Niketas. He lost Kastamonī and Gangra to the Byzantines, but retained possession of Niksar, which the Emperor Manuel besieged in vain. He also waged war on the Georgians and captured several towns in Cilicia. Niketas calls him lord of Kaisariya; on his coins he actually describes himself as lord of all Anatolia

and Romania (i. e. بلاد روم, Asia Minor, in the narrower sense of the district of Amasia). He was succeeded in 537 (1142-1143) by his brother Niẓām al-Dīn Yāghibasan (the Ἰαγουπασάν of the Byzantines, Yaghi Arslān of the Arabs, and Yakub Arslān of the Armenians). According to Niketas, p. 152, he ruled over Amasia and Angora and was brother-in-law of Ḳilidj Arslān II. of Ḳōniya; another brother-in-law of the Saldjūḳ Sulṭān ruled in Ḳaiṣarīya and Siwās, Dadunes, i. e. ʿImād al-Dīn Dhu ʾl-Nūn b. Malik Muḥammad, a nephew of Yāghibasan. Yāghibasan was in a way under the protection of the Emperor Manuel and was therefore constantly assailed by Ḳilidj Arslān (Kinnamos, p. 39 *et seq.*, year 1145). This did not however prevent him from plundering Byzantine territory; in 1155 he fell upon Oenaeum (Unie) and Pauraē (Bafra) on the Black Sea; but this did not prevent him from sending a special embassy to greet the Emperor when the latter appeared with an army in Cilicia, an allying himself with him in 1158 against Ḳilidj Arslān (Kinnamos, p. 176, 183, 200).

After the death of Yāghibasan, who according to Hazārfenn died in 562 (1166-1167), Ḳilidj Arslān decided to dispossess the Dānishmandids and drove Dhu ʾl-Nūn out of his territory; the latter in vain tried to take Amasia with the help of Yāghibasan's widow; on the other hand the Emperor Manuel claimed Yāghibasan's estate on the ground that it was originally Byzantine territory. Ultimately Amasia fell to Ḳilidj Arslān while Niksar surrendered to the Emperor (Kinn., p. 296 *et seq.*, 300). The disastrous war, which Manuel then waged with Ḳilidj Arslān, and which ended in the total defeat of the Byzantines, forced the Emperor to restore his conquests, (Niketas, p. 230 *et seq.*). According to Abu ʾl-Faradj, Dhu ʾl-Nūn had fled to the Emperor, who was trying to restore him; he then turned with greater success to the Atabeg Nūr al-Dīn of Damascus, who again procured him the possession of Siwās for a period.

Hazārfenn and Münedjdjimbāshi mention as successors of Yāghibasan:

1. Abū Muḥammad Djamīl Ghāzī, son of Yāghibasan;

2. Malik Ibrāhīm, son of Muḥammad, and nephew of Yāghibasan;

3. Shams al-Dunyā wa ʾl-Dīn Abu ʾl-Ḳādir Ismāʿīl, son of Malik Ibrāhīm, died 564 A. H. (1168-1169);

4. Dhu ʾl-Nūn, brother of Malik Ibrāhīm.

A coin of Ismāʿīl's is known which shows that he actually reigned, if only for a brief period; Dhu ʾl-Nūn's coins are more numerous. After the death of Nūr al-Dīn (May 1174), Ḳilidj Arslān finally made an end of the Dānishmandid kingdom. According to Djannābī and the author of the *Nukhbat al-Tawārīkh*, in von Hammer, *Gesch. des Osm. Reiches*, i. p. 22, Ḳilidj Arslān had the last Dānishmandid prince — probably therefore Dhu ʾl-Nūn — put out of the way by poison and at the same time occupied Malaṭya, where another branch of the family ruled. The latter is as yet only known from coins and scattered allusions in Armenian sources. The following dynastic list may be compiled.

1. ʿAin al-Dawla, son of Ghāzī (Malik Ghāzī), died 1151;

2. Dhu ʾl-Ḳarnain, son of ʿAin al-Dawla;

3. Nāṣir al-Dīn Muḥammad and

4. Fakhr al-Dīn Ḳāsim, sons of Dhu ʾl-Ḳarnain, about 1170 or 1172.

Three sons of Yāghibasan, Muẓaffir al-Dīn Maḥmūd and Ẓahīr al-Dīn Ilī Parwāna, and Sinān al-Dīn Yūsuf afterwards appear as *ūdj begleri* in the service of Kai Khusraw I.; Ilī Parwāna rose against Kai Kawūs I. (*Recueil des textes rel. à l'histoire des Seldj.*, iii. and iv. passim), and an inscription of Maḥmūd of the year 602 A. H. (1205-1206) has survived (*Zeitschr. f. Assyriologie*, xxxvii. p. 89 *et seq.*).

The chronology of the early Dānishmandids is uncertain; the accounts of Western and Eastern authors are defective and often contradictory. The main sources are the occasional references in Byzantine authors (Anna Comnena, Kinnamos, Niketas Choniates), the pertinent passages in Hazārfenn's *Tanḳīḥ al-Tawārīkh*, Münedjdjimbāshi (ii. 575 *et seq.*), Ḥādjdjī Khalīfa (*Djihānnumā*, p. 629) and the very remarkable coins (exclusively Æ) of the Dānishmand princes (most fully treated in Aḥmed Tewḥīd, *Müze-i hümāyūn, Meskūkāt-i ḳadīme islāmiye Kataloghi* [*Catalogue of Muh. Coins in the Ottoman Mus.*], iv. Nº. 101—119). Monographs by A. D. Mordtmann sen. in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxx. 467—486 and P. Casanova in the *Revue Numismatique Française*, 1894. (J. H. MORDTMANN.)

DĀNIYĀL. The prophet Daniel is not very often mentioned in Muḥammadan literature. Ṭabarī's *Chronicle* (see Index) states that he was among the people taken prisoner in Jerusalem by Nebuchadnezzar; this king recognised his wisdom and appointed him his private secretary (cf. the Book of Daniel, i. 1—6); he afterwards converted Cyrus (cf. Chap. xiv. 42); the latter is said to have appointed him his minister; the prophet asked him for permission for the Israelites to return to Jerusalem and rebuild the city and temple; Cyrus granted the people's wish but retained Daniel at his side and the latter was only allowed to return to his native land on the death of the king. According to another tradition, the king sent him home with the Israelites as their leader.

The story of the Lions' Den and the prophecy of the kingdoms of the world (cf. *op. cit.*, Chap. ii.) are also found in Ṭabarī's *Chronicle* but with considerable alterations.

We are further told that Daniel restored 1000 men to life, who had been dead 1000 years — a story which seems to be based on a misinterpretation of Chap. xii. of the Book of Daniel.

In his *Murūdj* (ii. 128) Masʿūdī distinguishes two Daniels, a younger who lived at the time of the Exile and an older who appeared much earlier in the period between Noah and Abraham; the elder is credited with the prophecy concerning the kingdoms of the world; he is also said to have composed a book of prophecies, the *Kitāb al-Djafr*. According to Masʿūdī (*op. cit.*, p. 118) there was a well close to the village of Babel, which was held to be that of the prophet Daniel; Christians and Jews visited it at certain festivals.

Al-Bīrūnī repeats a story according to which this prophet obtained his wisdom from the Treasure-Cave; this is a cave in which Adam concealed the secrets of wisdom (*Chronology*, ed. Sachau, p. 300: on this idea cf. *Die Schatzhöhle*, ed. and transl. by Bezold, Leipzig 1883—1888). The same author gives an account of a dispute between

Jews and Christians on the meaning of Chap. xii. 11, 12 of the Book of Daniel.

On the Tomb of Daniel in Sūs, or Tustar, cf. *Zeitschr. der Deutsch. Morgenl. Ges.* liii. 58 *et seq.* and *Jewish Encyclopaedia*, iv. 430, and the Arabic authors cited there.

See also Tha'labī, *Ḳiṣaṣ al-Anbiyā'* (Cairo 1325), p. 215 *et seq.* (B. CARRA DE VAUX).

DĀR (A.) "house", frequent in compounds of which the most important follow.

DĀR AL-BĒḌĀ (BAIḌĀ'), called CASABLANCA in Europe, a town on the Atlantic coast of Morocco, about 200 miles S. E. of Tangier and 200 N. W. of Mogador, in 33° 37′ N. Lat. and 12° 15′ W. Long. (Greenw.), with 30,000 inhabitants, including 4000—5000 Jews and 500—600 Europeans (Spaniards, French, English, German and Portuguese). The town is surrounded by walls crowned with towers and pierced by four gates. It is divided into three sections: the *Madīna* with houses built of stone in the Moorish style but with outer windows, traversed by broad irregular streets; the *Mallāḥ* or Jewish quarter; the *Tnāker*, a quarter of reed and clay huts. Adjoining the *Tnāker* is an extensive enclosure of recent origin which has not yet been built upon. There are no remarkable buildings; the great mosque, the only building of any importance, is by no means a work of art. The town is surrounded by a narrow girdle of orchards of olives and fig-trees and vineyards with a few scattered country houses.

The largest section of the native population consists of Arabs and arabicised Berbers, natives of the surrounding country, who form a proletariat of labourers, porters, camel-drivers etc. The public offices are filled by Moors who came almost entirely from Fez, Rbāṭ and Teṭwān. The Jews are artisans or merchants, as are the Europeans. The Muslims of Casablanca have a special reverence for Sīdī Belliūt, whom they regard as the patron saint of the town. This saint, whose cult seems to have made particular progress in the second half of the xix[th] century, is said to have had the gift of omnipresence and of subduing wild animals. According to Doutté, *Merrākech*, p. 15 (Paris 1905), his name is a corruption of the literary Arabic *Abu 'l-Luyūth* "the man with the lions". The water that falls into his Ḳubba is credited with the power of irresistibly bringing back to Casablanca any one who has left it. Casablanca is of considerable economic importance as a market for the district incorrectly called Shāwiya by Europeans, the arable surface (*tīrs* "black earth") of which is estimated at 1500 sq. miles and which sustains a population of 200,000 natives. In 1909 its foreign trade totalled £ 1,191,600 in value or about 20% of the trade of the whole of Morocco. The harbour is the busiest in Morocco although it consists of a dock accessible only to small boats, while ships of large tonnage have to anchor in an open and unsheltered roadstead.

Casablanca occupies the site of Anfā, the Anafe of Marmol, a very flourishing place in the middle ages. Idrīsī mentions it as a harbour visited by merchant ships which came to get wheat and barley (Idrīsī, ed. de Goeje, p. 84). According to Leo Africanus, Anfā was a rich and populous town, with beautiful buildings, traces of which were still to be seen in his time, where learning was held in great honour. In the xv[th] century A. D. its possession was disputed between the Marīnid princes of Fās and Marrākush, but Anfā seems to have succeeded in retaining its independence. The piratical raids of its inhabitants on the Spanish and Portuguese coasts however exposed them to attack from the Christians in retaliation. The Portuguese sent a fleet of 50 ships against Anfā in 1468. At the approach of this fleet, the people of Anfā, feeling unfit to offer any resistance, quitted the town and abandoned it to the Christians who entered without opposition and sacked it utterly.

The site of Anfā remained deserted till 1515, when the Portuguese laid the foundations of a settlement which they called Casablanca but had however soon to evacuate. It was not till the xviii[th] century that Sulṭān Mūlāy Muḥammad, anxious to develop Moroccan commerce, rebuilt the town which received the name of Dār al-Bēḍā. Dār al-Bēḍā, where the Spaniards obtained the monopoly of the trade in cereals in 1789 and which had to sustain an attack from the natives of the surrounding country in 1790, was at the beginning of the xix[th] century still only a wretched little town. It developed considerably in the reigns of Mūlāy 'Abd al-Raḥmān and his successors so that by the end of the xix[th] century it had become the most important centre of commerce in the whole empire. The enlargement of the harbour was deemed necessary and undertaken. The murder of several European workmen employed on the harbour works on the 30[th] July 1907 provoked the armed intervention of France. A body of soldiers occupied the town and restored peace in the Shāwiya country which had risen. The French occupation has resulted in a material transformation of Casablanca as well as in a notable increase in the number of European residents.

DĀR AL-DJIHĀD. [See DĀR AL-ḤARB.]

DĀR FŪR or DĀR FŌR, a territory and Sulṭanat in the Eastern Sūdān, is one of the still unopened areas in Central Africa, nominally belonging to the English sphere of influence and even paying tribute (cf. the annual *Reports on Egypt and the Sudan*) but still practically independent. Its boundaries can only be roughly defined as: in the north the 15° and in the south the 10° N. Lat., in the west the 22° and in the east the 27° E. Long. (Greenw.). Dār Fūr is bounded on the west by the Sulṭanat of Wadā'ī under French influence, in the south and east by the provinces of Baḥr al-Ghazāl [q. v., p. 579] and Kordofān of the Anglo-Egyptian Sūdān. To the north lies the Eastern Sahara, the ownership of which is still undefined. Its frontiers have frequently changed. At times great stretches of Wadā'ī, Kordofān and even Baḥr al-Ghazāl have belonged to it and at others the rule of its Sulṭāns has been limited to the natural geographic centre, the Djabal Marra and the territories adjoining it. Since the end of the xviii[th] century the capital has been al-Fāsher. Nachtigal, to whom we owe all our real knowledge of the older Dār Fūr, estimated the population of the whole country at 3—4 millions, but this suffered great diminution in the horrors of the conquest by Zibēr Pasha

and in the time of the Mahdists. Dār Fūr is inhabited by negroes, immigrant Arabs and half-breeds. The five main elements of the population are distinguished by the letters *d*, *t*, *f*, *z*, *n*. These are according to Nachtigal whose orthography is practically retained here, 1.) the Dādscho — called Tādjō by Slatin Pasha and the geographers since Idrīsī — probably the old owners of the country, living in the south and south-west; 2.) the Tundscher (*tundjer*, perhaps from *tudjdjār*), of Arab origin but strongly mixed, said to have come 400 years ago from North Africa into the country, still speaking Arabic and living in the centre of the kingdom at the eastern end of the Marra range and also in Wadā'ī and Bornū [q. v., p. 747 *et seq.*]; 3.) the Fōrāwa, forming with the Dādscho the great mass of the population, live principally in the Marra range and the S., S.W. and W.; they speak a language of their own; 4.) the Zoghāwa are wholly or half-nomadic and live chiefly in the N.; 5.) the Nawā'ibe, who are probably the earliest immigrant Arabs and are divided into numerous sections, all of which profess to belong to the Djuhaina [q. v.] tribe. They are mostly cattleherds, Baḳḳāra (cf. the article BAGGĀRA, p. 561).

Of these elements, the Zoghāwa have played a certain part in the north and east outside of Dār Fūr proper (*Der Islam*, i. 162 *et seq.*), but in the history of the land itself they are not at all prominent. The course of the latter was first defined by the Dādscho, then by the Tundscher and finally by the Fōrāwa, who within the historical period gave Dār Fūr proper (the dwelling of the Fōrāwa) the name still in use to this day. According to Nachtigal, iii. 360, the Dādscho ruled the country for some centuries from the Marra mountains. They lost their power without a struggle to immigrant Arabs, the Tundscher. The first ruler of this line was called Aḥmad al-Māḳūr. The name is explained by Slatin as al-Ma'ḳūr (the man with the cut sinew in his foot) and an etiological legend adduced in support. He seems a historical personage but his date cannot be located. The whole Tundscher period is still very uncertain. The last Tundscher ruler Shau was overthrown by a relative, a descendant of Aḥmad, who on his mother's side belonged to the tribe of Kēra, a branch of the Fōrāwa. This, the first ruler of the Kēra dynasty, was called Dāli or Delīl Bahar and is still one of the most popular of the kings of Dār Fūr, being particularly famous for the national system of laws which he is credited with introducing, the Book of Dāli, which has unfortunately not yet been studied by any European. The Book of Dāli forms the basis of the administrative and criminal law of later times. According to it, for example, the land was divided as follows. The country was divided into five provinces, the north province Dār-Tokanjāwi, the south province Dār-Uma, the southwest province Dār-Dīma, the east province Dār-Dāli and the west province Dār al-Gharb. Each province was divided into 12 districts and many minor divisions, but this division has not survived in its entirety. The west province was the only one, which did not have a governor, but its three districts were ruled directly by the king. The centre of the Marra range had also a separate organisation of its own. The punishments inflicted by the criminal code were exclusively money fines which, when money was not available, were paid in kind, confiscation of property etc. It is highly improbable that this book originated at so early a period; for it may be presumed that the use of writing was not known till a later period. If the whole story is not actually fiction, the customary law must have been codified at a later period and ascribed to the legendary founder of the ruling dynasty. It is also possible that a king named *Dāli* was invented from the book bearing this name. Nachtigal and Slatin regard both individual and book as historical. Nachtigal places the Dāli of the legend in the middle of the xvth century. Some ten kings followed him, whose names are uncertain. The last of this line was overthrown by Sulaimān Solon, the son of an Arab woman. With him we enter on more historical ground. Islām, which had possibly already entered the land with the Tundscher but secured no strong foothold, now became the state religion; the borders of the flourishing kingdom, which became a real state, were extended far and wide across the Nile and farther to the Atbara. The most prominent ruler and the second founder of the kingdom was Sulaimān Solon's grandson Aḥmad Bokkor, who was the first to make Dār Fūr a real Muhammadan state and by attracting foreign elements on a higher scale of civilization sought to elevate the country. At this period a strong current of immigration set in from Bornū [q. v., p. 747 *et seq.*] and Bagirmi [q. v., p. 570 *et seq.*]. Mosques and madrasas were built everywhere, firearms introduced and the government probably first organised on the lines which Nachtigal described at a later period. It is impossible to mention here the constant civil wars, the quarrels with Wadā'ī and the struggles for the throne which Nachtigal has carefully detailed. Dār Fūr remained the great power in the Eastern Sūdān till Muḥammad 'Alī conquered the Sūdān. The Sulṭāns now sought to enter into negotiations with Constantinople and 'Abd al-Madjīd and 'Abd al-'Azīz actually issued firmans confirming them in their power. But circumstances were stronger than these firmans. It has already been narrated in the article BAḤR AL-GHAZĀL [q. v., p. 579], how the Egyptian government followed in the wake of the slavetraders. Zibēr Pasha at the instigation of the Egyptian government advanced on Dār Fūr while Ismā'īl Pasha co-operated in the north. In autumn 1874, King Ibrahīm (Brahīm) fell in battle with Zibēr at Manoashi and soon afterwards al-Fāsher was sacked. The country was now ruled from Kharṭūm but pretenders still held out in the more inaccessible parts. Both fell before Zibēr Pasha and succeeding governors continued the war with his successor Hārūn. A general rising, which Hārūn was able to stir up against the Egyptians, was quickly put down, and Gordon, the recently appointed Governor-General of the Sūdān, was able to pacify the turbulent spirits of Dār Fūr also. He left Ḥasan Pasha Ḥilmī there as Mudīr who was succeeded by the Italian Messedaglia and later by the Austrian Slatin.

While he was governor, the Mahdist rebellion broke out and Slatin had to surrender in 1883. Meanwhile Abdullāhi Dud Benga, a cousin of the Sulṭān Hārūn who had fallen in the war with the Egyptian government, had set himself up as a pretender in the Marra mountains. In 1885 he voluntarily betook himself to the Mahdī in Kharṭūm; when the Mahdī's kingdom collapsed, 'Alī

Dīnār succeeded in reviving the ancient Dār Fūr kingdom. England has not again intervened in the domestic affairs of the land but is on diplomatic relations with ʿAlī Dīnār and receives tribute from him regularly. With the advance of the Sūdān railway Dār Fūr is gradually being opened up to commerce. The land has recovered somewhat under ʿAlī Dīnār's rule from the grievous damage done it by the constant wars and the ravages of the Mahdists. A list of the historical Sulṭāns is given here; a very useful genealogical table is given in Helmolt's *Weltgeschichte*, iii. 573.

1596—1637 Sulēmān Solon;
1637—1682 Mūsā, son of the preceding;
1682—1722 Aḥmad Bokkor, son of the preceding;
1722—1732 Muḥammad Daura, son of the preceding;
1732—1739 Omar Lēle (the Ass), son of the preceding;
1739—1752 Abu ʾl-Ḳāsim b. Aḥmad Bokkor, uncle of his predecessor;
1752—1785 Muḥammad Tīrāb, brother of his predecessor;
1785—1799 ʿAbd al-Raḥmān, brother of his predecessor;
1799—1839 Muḥammad al-Faḍl, son of the preceding;
1839—1873 Muḥammad al-Ḥasīn, son of the preceding;
1873—1874 Ibrāhīm (Ibrāhīm), son of the preceding;
1874—1875 Bosch b. Muḥammad al-Faḍl, uncle of his predecessor;
1875—1879 Hārūn al-Rashīd, son of the preceding;
1880—1885 ʿAbdullāhi Dud Benga, cousin of the preceding;
1885— ʿAlī Dīnār, regnant.

It was fortunate for science that Nachtigal was able to visit Dār Fūr just before the break-up of the ancient kingdom and to make a permanent record of the conditions then existing. The great collections of material that Slatin made at a later period were destroyed by the Mahdists. Of special interest are his notes on the ceremonial punctiliously observed at the court with its hierarchy of officials. Immediately below the king (Alā Kūri or Ari) ranked the king's mother who bore the title Abo and as the chief of the Abonga (plur. of Abo), the seven mothers — widows or relatives of the royal house advanced in years — also played a certain part in the state religion. The Kamene (the king's neck), a kind of reflection of the king, the king's shadow, as Nachtigal calls him, was hardly less important. He was an official, to whom all honour was shown as to the king himself, but he had no actual regal power. In ancient times he was put to death when the king died. This shadowy figure was of less actual importance than the Abū Shaikh Dāli, the chief eunuch and governor of the eastern province. He had charge of the harem, had great influence on the transactions of the court and in earlier times was the real king-maker when a vacancy in the throne occurred. He was considered the guardian of the book of Dāli, whence his name. He had also to keep a sacred fire alight which was only extinguished on the death of a king. A second such fire was maintained in the royal palace. Fourth in rank was the Iya Basi, i. e. "the great woman", almost always a sister of the king. She actually had the attributes of an official, appeared in public on horseback, and had great influence everywhere, almost more than the king's mother although the latter was superior to her in rank. These were only the highest members of the court to whom were attached numerous others.

We have already seen how much that is pre-Islāmic has survived in Muhammadan Dār Fūr, and the late appearance of Muhammadan influence in originally heathen ceremonies like the principal annual festival, the great drum festival, may be clearly recognised. It was originally merely a spring festival celebrated according to the solar year at which sacrifices were offered to former kings at their tombs. The ceremony became so far influenced by Islām as to have passages from the Ḳorʾān read at the tombs for the good of the souls of the Muslim kings along with these sacrifices. The Ḳorʾān was not read at the tombs of heathen kings but sacrifices continued to be offered. To this was attached a typical spring rite. The king dug seven holes in which he placed seeds. These holes were then filled in by the seven Abogas; a further part of the ceremony, from which the whole took its name, was the slaughter of white cows and oxen with the skin of which the great royal drum al-Manṣūra and its "child" the little drum were covered. The king had to beat a rib of the slaughtered animal on its own skin drawn across the drum. The drum as a tribal religious symbol is also found among the Fulbe (Strümpell in *Mitteilungen der Geographischen Gesellschaft in Hamburg*, xxvi. (1912), p. 51 *et seq.*). The third part of the ceremony consisted in the partition of a sheep, of which a certain part with symbolic meaning was allotted to each offices. The half decayed intestines of the animal had then to be devoured by the courtiers before the eyes of the warriors of the court. Whoever hesitated, was originally slain. The sheep at this peculiar meal is said to have been substituted for a virgin under the influence of Islām. Elsewhere we also find traces of a primitive cannibalism in Dār Fūr. It is to be hoped that the future opening up of Dār Fūr will add to the account of this interesting land by Nachtigal.

(C. H. Becker.)

DĀR AL-ḤARB. In Muslim constitutional law the world is divided into *Dār al-Ḥarb* and *Dār al-Islām*. "Abode of Islām" is that which is already under Muslim rule; "Abode of war" is that which is not, but which, actually or potentially, is a seat of war for Muslims until by conquest it is turned into "Abode of Islām". For an anomalous and disputed exception, see *Dār al-Ṣulḥ*. Thus to turn *Dār al-Ḥarb* into *Dār al-Islām*, is the object of *Djihād* [q. v.], and, theoretically, the Muslim state is in a constant state of warfare with the non-Muslim world. But practically that is now impossible. The rulers of Islām are not in a position to keep up a constant warfare *contra mundum*. Territories, too, once Muslim, are gradually coming under the rule of unbelievers. To meet this situation the early and logical position

has had to yield. Land once Abode of Islām does not become Abode of War, except on three conditions: (i.) That the legal decisions of unbelievers are regarded and those of Islām are not; (ii.) That the country immediately adjoins an Abode of War, no Muslim country coming between; (iii.) That there is no longer protection for Muslims and their non-Muslim Dhimmis [see *Dhimma*]. Of these, the first is the most important, and some have even held that so long as a single legal decision (*ḥukm*) of Islām is observed and maintained, a country cannot become *Dār al-ḥarb*. The *Dictionary of Technical Terms*, (p. 466), having a regard for the situation in India, sums up: "This country is an abode of Islām and of Muslims although it belongs to the accursed ones and the authority externally belongs to these Satans". Practically, of course, no rebellion under such circumstances would be legal unless it had a good prospect of success and were led by a Muslim sovereign. These conditions being fulfilled, unbelieving control of an Abode of Islām is an illegal absurdity. When a Muslim country does become a *Dār al-ḥarb*, it is the duty of all Muslims to withdraw from it, and a wife who refuses to accompany her husband in this, is *ipso facto* divorced.

W. Hunter, *Indian Musulmans*; the last two on the Indian situation. (D. B. MACDONALD.)

DĀR AL-ISLĀM. An Abode of Islām is a country where the ordinances of Islām are established and which is under the rule of a Muslim sovereign. Its inhabitants are Muslims and also non-Muslims who have submitted to Muslim control and who, under certain restrictions and without the possibility of full citizenship, are guaranteed their lives and property by the Muslim state [see DHIMMA]. They must belong to a People of Scripture (*ahl kitāb*) and may not be idolaters. See, also, DĀR AL-ḤARB and DĀR AL-ṢULḤ and the bibliographies there. (D. B. MACDONALD.)

DĀR AL-NADWA was the name given to the public hall in an Arabian town, in which municipal, religious and other affairs of general interest were discussed, but the term is used *par excellence* for the town-house or *hôtel de ville* of Mecca. This building, which stood on the South-West side of the Kaʿba looking upon the Ṭawāf al-Sharīf, was originally the dwelling-house of Ḳuṣaiy, which he built for a palace about the year 440 A. D. It was called the Council House because in it Ḳuraish assembled to discuss public matters. In order to become a member of this assembly it was necessary to be not less than forty years of age. Here marriages were arranged, and maidens who had reached woman's estate were for the first time clothed in the *dirʿ*. Here, too, the leader of a military expedition received from the hands of Ḳuṣaiy the flag or *liwā*. The ceremony of tying the piece of white cloth upon the lance, which lasted till the end of the Arab empire, was called *ʿaḳd al-liwā* (Ibn Hishām, p. 80.). Ḳuṣaiy bequeathed his five privileges of *ḥidjāba*, *siḳāya*, *rifāda*, *liwā* and *nadwa* to his son ʿAbd al-Dār, but on the death of the latter the sons of his brother ʿAbd-Manāf attempted, on the ground of their wealth and influence, to seize them. Ḳuraish became divided into two factions. In the end the faction of ʿAbd Manāf acquired the *Siḳāya* and *Rifāda*, whilst that of ʿAbd al-Dār retained the *Ḥidjāba*, *Liwā* and *Nadwa*. At the time when the first two functions were held by ʿAbd al-Muṭṭalib, the other three were divided amongst different individuals, who were consequently of less importance than ʿAbd al-Muṭṭalib.

It was in the Dār al-Nadwa that Ḳuraish assembled to decide the fate of Muḥammad immediately before the Hidjra when Iblīs also obtained admission to their council (Ibn Hishām, p. 323 ff.). The building was still the same which had been the house of Ḳuṣaiy. In front of it also Ḳuraish took their stand to watch Muḥammad and his companions make the circuit of the Kaʿba in the year 7 A. H., according to a tradition ascribed to al-ʿAbbās (*op. cit.* p. 789).

Bibliography: Caussin de Perceval, *Essai*, I, 235 ff.; Ṭabarī, I, 1098. See also Lammens, *La République marchande de la Mecque* (*Bull. Inst. Egypt*, série v. t. 4, p. 23—54); Mart. Hartmann, *Quṣaij*: *Zeitschr. für Assyriologie*, xxvii. 43 sq. The latter thinks that Dār al-Nadwa was a temple of Ḳuṣaiy, the *deus eponymus* of the clan of Ḳuṣaiy.

(T. H. WEIR.)

DĀR AL-SALĀM, "Abode of Peace", is in the first place a name of Paradise in the Ḳorʾān (vi. 127; x. 26), because, says Baiḍāwī, it is a place of security (*salāma*) from transitoriness and injury, or because God and the angels salute (*salāma*) those who enter it. Hence it was given to the city of Baghdād by al-Manṣūr, alongside of Madīnat al-Salām (Cf. art. BAGHDĀD, p. 563 above, and also in the geographical lexicon of Yāḳūt, *ad init.*). As for the capital of German East Africa s. DARESSALAM, p. 923. (T. H. WEIR.)

DĀR AL-ṢINĀʿA, also DĀR AL-ṢANĀʿA and DĀR AL-ṢANʿA, the Arabic word for dockyard. The literal translation is "house of work". With so general a meaning, it is natural that Dār al-Ṣināʿa not only means dockyard but also simply workshop (e. g. of goldwork cf. Dozy, *Supplément*, s. v.), but the meaning Dār Ṣināʿat al-Baḥr is by far the commonest and has passed into the Romance languages from the Arabic like so many other nautical and commercial terms. In Italian it appears as *darsena* and *arsenale*, in Spanish as *arsenal* and thence has passed into almost all European languages (Dozy and Engelmann, *Glossaire des Mots Espagnols et Portugais dérivés de l'Arabe*, p. 205 *et seq.*). The dockyards were in the first place naval shipyards. In the earliest period of the Caliphate there appears to have been a Dār al-Ṣināʿa only in Egypt, (Balādhurī, *Futūḥ*, p. 117). In the year 49 (669), Muʿāwiya built an arsenal at ʿAkkā (Acre), which was transferred by the later Umaiyads to Ṣūr (Tyre). Even in the reign of ʿAbd al-Malik, warships were built by him in Tunis (Dozy and Engelmann *l. c.*). We are best informed on the arsenals of Egypt, to which Maḳrīzī devotes a comprehensive chapter in his *Khiṭaṭ*, II. 189 *et seq.* The Aphrodito papyri give valuable information on the Egyptian arsenals (cf. H. I. Bell, *Catalogue of Greek Papyri in the British Museum*, Vol. iv.: *The Aphrodito Papyri*, p. xxxiii; C. H. Becker, in *Zeitschr. für Assyr.*, xx, 84 *et seq.*). At a later period there were naturally similar arsenals at all

important places on the coast. The head of a Dār al-Ṣināʿa was called *Mutawallī 'l-Ṣināʿa*. Ibn Mammātī, *Ḳawānīn al-Dawāwīn*, p. 16, gives some account of the work done in one of these government dockyards. (C. H. Becker.)

DĀR AL-ṢULḤ. Besides *Dār al-Ḥarb* and *Dār al-Islām* [q. v.] some schools of canon law recognise the existence of a third division, *Dār al-Ṣulḥ*, or *al-ʿAhd*, which is not under Muslim rule, yet is in tributary relationship to Islām — *Ṣulḥan*, "by agreement", being generally used in canon law as the opposite of *ʿAnwatan* "by force". The two historical examples of such a status, and the origin, apparently, of the whole conception, are Nadjrān and Nubia. With the Christian population of Nadjrān Muḥammad himself entered on treaty relationships, guaranteeing their safety and laying on them a certain tribute, regarded by some afterwards as *Kharādj* [q. v.] and by others as *Djizya* [q. v.]. See on the whole story Balādhurī, *Futūḥ* (ed. de Goeje), p. 63 *et seq.*; Sprenger, *Leben Mohammads*, iii. 502 *et seq.* In the course of events and because of their position within Arabia, this protection for the people of Nadjrān amounted to very little. The case of Nubia was somewhat different. By their skill with the bow the Nubians were able to hold off the Muslim attack and to maintain their independence for centuries. In consequence, ʿAbd Allāh b. Saʿd entered into treaty (*ʿAhd*) with them, not requiring the head-tax (*Djizya*) but only a certain tribute in slaves [s. BAḲT, p. 608.] Others, however, evidently disliking the implication that there could be any territory in a status of neither Islām nor war, and therefore outside of Muslim conquest, maintained that this was not really a *Ṣulḥ* or *ʿAhd* but only a truce (*Hudna*) and an arrangement for an exchange of commodities (Balādhurī, *Futūḥ* (ed. de Goeje), p. 236 *et seq.*; Weil, *Gesch. d. Chalifen*, i. p. 16, *et seq.*; Lane-Poole (following Maḳrīzī), *Hist. of Egypt*, p. 21 *et seq.*; Torrey (transl. from Ibn ʿAbd al-Ḥakam), *Yale Bibl. & Sem. Studies*, p. 307 *et seq.*). This conception in some vague form was probably also the basis on which treaty relations with Christian states were accepted as possible; the presents sent by such states would then be regarded as *Kharādj*. The constitutional situation on the matter is thus formally laid down by Māwardī. All territories, into the control of which, in different degrees of directness, Muslims come, fall into three divisions: (i.) those taken by force of arms; (ii.) those taken without fighting after the flight of their previous owners; (iii.) those taken by treaty (*Ṣulḥ*). The last divides again into two, according as the title to the soil is (a) vested in the Muslim people as a *Waḳf*, or (b) remains with the original owners. In the first case the original owners can remain in actual possession, becoming *Dhimmīs* [q. v.], and paying *Kharādj* and *Djizya* and the land becoming *Dār al-Islām* [q. v.]. In the second case, (b), the terms of the treaty are that the owners retain their lands and pay a *Kharādj* from their produce; that this *Kharādj* is regarded as a *Djizya* which falls away when they embrace Islām; that their country is neither *Dār al-Islām* nor *Dār al-Ḥarb* [q. v.] but *Dār al-Ṣulḥ* (otherwise called *Dār al-ʿAhd*); and that their lands are absolutely their own to sell or pledge. When these pass to a Muslim, *Kharādj* can no longer be collected. This condition of the owners holds so long as they observe the requirements of the treaty, and the *Djizya* cannot be collected from them as they are not in a *Dār al-Islām*. Abū Ḥanīfa, however, held that by the treaty their country had become a *Dār al-Islām* and they were *Dhimmīs* and should pay the *Djizya*. As to what was the situation if they broke the treaty after entering into it, there was dispute between the schools. Al-Shāfiʿī held that if their territory was then conquered, it came into the category (i. above) of territory taken by force; and if it was not conquered, it became a *Dār al-Ḥarb*. Abū Ḥanīfa, however, held that if there was a Muslim in their territory, or if a Muslim country came between their territory and a *Dār al-Ḥarb*, then their territory was a *Dār al-Islām* and they were rebels (*Bughāt*). If neither of these conditions held, then it was a *Dār al-Ḥarb*. But others maintained that it was a *Dār al-Ḥarb* in both cases (*Aḥkām al-Sulṭāniya*, ed. of Cairo 1298, pp. 131 *et seq.*). But that this situation was anomalous and ambiguous, appears plainly. Māwardī himself, when reckoning the Lands of Islām (*Bilād al-Islām*), includes among them this *Dār al-Ṣulḥ* (pp. 150 and 164), and Balādhurī, when dealing with the rules of *Kharādj*, makes no mention of this distinction.

Bibliography: References are given in the article. The subject has been little treated by western scholars. See, however, Juynboll, *Handb. des Islamischen Gesetzes*, p. 340 and 348 and the authors cited there p. 344-345. Further: Yaḥyā Ibn Ādam, *Kitāb al-Kharādj* (ed. Juynboll), p. 35 *et seq.* (D. B. Macdonald.)

DAR (P.; Avestic *dvar*) "door or gate", particularly the gate or outer court of a royal palace. *Dar-gāh* (Pahl. *dargās*) "door", properly "place of the door". *Dar-i Saʿādat* (formerly *dar-i dawlat*) "gate of bliss", a name given to Constantinople. *Dar-bār* (Anglo-Indian *durbar*) is the name given in India to solemn court ceremonials, receptions and morning audiences.

DAR-I ĀHANĪN or Derbend-i Āhanīn, Arabic Bāb al-Ḥadīd, Old Turkish Tamir-Ḳapïgh = "Iron Gate" — a frequently recurring name in the Muḥammadan world for important passes and ravines. The best known is the ravine, about 2 miles long and only 12—20 yards broad, in the Baisun-taw range, through which runs the main road from Samarḳand and Bukhārā to Balkh. This ravine is first mentioned under its Persian name by Yaʿḳūbī (ed. de Goeje, p. 290, 1); Yaʿḳūbī's statement that a "town" bore this name is not confirmed by any other authority. The name "Iron Gate" certainly dates from pre-Muḥammadan times and was known to the Chinese pilgrim Hiuan-Ćang (*Mémoires sur les Contrées Occidentales*, trad. par Stan. Julien, i. 23). To the east of this ravine began the highlands on the upper course of the Oxus comprised by the Arabs under the name Ṭukhāristān (Chin. Tu-ho-lo), where Buddhism still reigned supreme as late as the viith century A. D., in opposition to the districts of Samarḳand and Bukhārā. In later times also the "Iron Gate" was always regarded as the natural boundary between Mā warāʾ al-Nahr proper and the lands dependent on Balkh on both sides of the Oxus.

Besides the "Iron Gate" there are other routes across the Baisun-taw, which were known even in the viith (xiiith) century; one of these routes

is described by the Chinese pilgrim Čang-č'un who was here in the autumn of 1223 (E. Bretschneider, *Mediaeval Researches* etc., I. 91); but this does not seem to have affected the strategic or commercial importance of the ravine. In the descriptions of the campaigns that have affected these districts, the "Iron Gate" is almost always mentioned; in the ivth (xth) century the ruler of Čaghāniyān [q. v., p. 811] had a fortress here which was burned in 337 (948) by an army sent by the Sāmānid Nūḥ b. Naṣr (Gardīzī in W. Barthold, *Turkestan* etc., i. 9). All caravans bearing goods from India via Balkh to Samarkand and Bukhārā passed through the "Iron Gate"; a day's journey to the north of the ravine, at Kandak, the road to Nakhshab (Nasaf among the Arabs, the modern Karshī) and Bukhārā separated from the road to Kash (Kiss among the Arabs, the modern Shahr-i Sabz) and Samarkand. As is clear from Clavijo (ed. Sreznewski, p. 231) there was still a customs house here in 1404 from which Tīmūr drew a large revenue. Until 1875 Clavijo was, so far as is known, the only European who had ever passed through the "Iron Gate". The ravine is sometimes mentioned by Sharaf al-Dīn Yazdī (*Ẓafar-Nāma*, Ind. ed., i. 49 etc.) and also by Bābur (*Bābur-Nāma*, ed. Beveridge, f. 124) by the Mongol name Ḳahlagha (this is the form in which it is written in the Arabic script; at the present day it is pronounced Ḳalgha or Khalgha among the Mongols, whence the name of the town Kalgan) "gate" (the word is not Turkish as supposed by Le Strange, *The Lands of the Eastern Caliphate*, p. 441). The name Burghūla-Khāna ("house of the chamois") (which was found in use by the first Russian travellers to reach there (in 1875) is first mentioned by Muḥammad Wafā Karmīnagī (*Tuḥfat al-Khānī*, MS. in the Asiatic Museum, c 581^{b}, f. 184^{b}, in the description of a campaign by Muḥammad Raḥīm Khān in 1171 (1757).

At the present day the Russian post-road from Samarkand to Termes (Tirmidh) runs through the "Iron Gate". The road is not now of the slightest strategic or commercial importance; the "Iron Gate" is therefore only regarded by modern travellers as a remarkable natural feature of importance for the study of the geological conditions of the neighbourhood; no traces of mediaeval buildings have survived here. The view of the ravine in Reclus (*Nouvelle Géographie Universelle*, vi. 503) is a reproduction of a drawing made in 1879 by the Russian painter Karazin; the same view is given in Mushketow's *Turkestan*, I. 555.

(W. BARTHOLD).

DĀRĀ, Arabic form of the name Dārayawahush = Darius; the form Dārayush is also found as well as the Persian forms Dārāb and Dārāw. Muḥammadan authors distinguish two Dārās: Dārā the elder, son of Bahman, son of Isfandiyār, and Dārā the younger, son of Dārā the elder.

Bahman had, as the Magean religion allowed, married his own daughter Humāī or Humāya but died soon afterwards leaving her enceinte; she began to reign but when the child was born, fearing that he would be placed on the throne in her stead she placed him in a box on the river of Balkh (Dehās). A miller found and brought up the boy whom he called Dārāb. When he was twenty years of age, Humāī recognised him and gave him the crown. After his mother's death he left Balkh and went to reside in Persia; there he founded the city of Dārāb and afterwards lived in Babylon; his reign was twelve years long.

His son Dārā is the Darius who was defeated and put to death by Alexander after reigning forty years. Philip of Macedon paid tribute to him as he had done to his father; but when on the death of Philip, Darius sent to demand the tribute from Alexander, the latter refused, saying, "I have slain and eaten the goose with the golden eggs". According to Mas'ūdī, *Kitāb al-Tanbīh*, (*Livre de l'Avertissement* transl. Carra de Vaux, p. 247), it was Aristotle who advised Alexander to go to war with Darius. Alexander bribed two of Darius's chamberlains, who mortally wounded him on the battle field; seeing that he was dying, Alexander went up to him and received his last wishes; he then married his daughter. The two chamberlains are called Bessus and Ariobarzanes in the Greek *Romance of Alexander* and Bessus and Nabarzanes in history. The Persian translation of the history of Dārā is from the Greek romance (Ṭabarī's *Chronicle*, transl. Zotenberg; Nöldeke, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, p. 3).

Dārā the younger had built a fire-temple at Sābūr in Fārs (according to Mas'ūdī, *Les Prairies d'Or*, iv. 78). The date of his death is a starting point for the computation of historical epochs; he is regarded as the ancestor of the Sāsānids.

Firdawsī devotes two long cantoes to the two Dārās. He reserves the form Dārāb for the elder, the son of Humāī, and attributes to him the foundation of the town of Dārābdjird [q. v.] and of the fire-temple there. Dārāb had married a daughter of the king of Rūm (Philip of Macedon) named Nāhīd, and had sent her back to her father, enceinte with Alexander. Alexander would thus be the elder brother of Darius the younger (*Shāh-nāmah*, *Livre des Rois*, transl. by Jules Mohl, Vol. v. Chap. xviii. xix.).

Dārā or Daras-Anastasiopolis is a fortified town between Mārdīn and Niṣībīn, which was taken from the Greeks by Khusraw (Chosroes) I. Anōsharwān in the campaign of 540 (Nöldeke, *op. cit.*, p. 239). — Dārā-i Takht is in Afghānistān.

(B. CARRA DE VAUX.)

DĀRĀ SHIKŌH, eldest son of Shāh Djahān. His mother was Ardjūmand Bānū Mumtāz Maḥal, and he was born at Adjmīr on the 20th March 1615. In 1633 he was married to his cousin Nādira Begam the daughter of Prince Parwīz, and granddaughter of Djahāngīr. By her he had one daughter, Djānī Begum or Djahān Zeb Bānū, and two sons Sulaimān Shikōh and Sipihr Shikōh. Dārā, says Elphinstone, was a frank and high-spirited prince, dignified in his manners, generous in his expense, liberal in his opinions, open in his enmities; but impetuous, impatient of opposition, and despising the ordinary rules of prudence as signs of weakness and artifice. In most of these characteristics he was the opposite of his younger brother Awrangzēb whom he used to speak of as the *Namāzī* "the prayer-maker". He had the inquiring spirit of his great-grandfather Akbar, and was much interested in Ṣūfism and other religious questions. But he had not his ancestor's military skill or daring, and he was unfortunate in all his undertakings. He was thus no match for Awrangzēb. Somehow, he seems to me to resemble Charles I. of England. He was like him in uxoriousness, attachment to reli-

gion, literary tastes and haughty temper. He resembled him too in his fate. In 1653 he made a long and fruitless attempt to take Ḳandahār. In 1657 when his father fell ill, he practically governed the empire. But his younger brothers could not endure his predominance, and he was twice defeated by Awrangzēb, once near Agra, in June 1658, and again at Adjmīr in March 1659. He was betrayed and seized by the Afghān Malik Djiwan the chief of Dādar (qu. the Dādri of the *Imperial Gazetteer*) and brought to Dihlī where he was put to death by order of Awrangzēb in the end of August 1659. He was the author of several books which are noticed in Rieu, *Catalogue of Persian Mss.* The best known is the *Safīna-i Awliyā* or "Ship of Saints", a series of short biographies of Muḥammadan saints. It has been lithographed at Lucknow and there is a very full table of its contents in Ethé, *Catalogue of the Persian Mss. of the India Office*, N°. 647, pp. 274—316. There is much about Dārā in Bernier and Manucci, both of whom were personally acquainted with him. (H. BEVERIDGE.)

DARABDJIRD, a town and district in Fārs; the principal places in the district are Fasā and Yazd-Khwāst. The town which is surrounded by a wall and by suburbs had four gates and a rocky dome-shaped mass in the centre. In the neighbourhood, bitumen (*mūmiyā*) was collected in a vault closed with an iron door and opened once a year in June, in the presence of the authorities of the town; the pure *mūmiyā* was kept in the royal treasury (Yāḳūt). Industry was in a flourishing condition there; all kinds of clothstuffs, mats of rushes, and the tapestry known as *sūsan-gird* were manufactured. Salt mines in the neighbourhood still yield rock-salt of various colours. In Īrānian legend, the foundation of this town is attributed to Dārāb, father of Dārā (Darius III. Codomannus).

Spiegel, *Erānische Alterthumskunde*, i. 88; ii. 585; G. Le Strange, *The Lands of the Eastern Caliphate*, p. 288 *et seq.* (CL. HUART.)

DARAZĪ, was one of the founders of the religion of the Druzes, not the most important who seems to have been Ḥamza, but the one who has given his name to the sect. Several historians, both Muḥammadan and Christian, have written about him and he is also referred to in the books of the Druzes; unfortunately these different sources do not at all agree with one another.

It seems certain that Darazī began as a Bāṭinī missionary or dā'ī [q. v., p. 895]. According to the Christian historians John of Antioch and al-Makīn, the first of whom was contemporary with him, he was called Muḥammad b. Ismā'īl and was of Persian origin; according to the books of the Druzes he bore the praenomen Nashtegīn which is Turkish. The vocalisation *Darazī* is given in the books of the Druzes.

He came to Egypt in 408 (1017). He had recognized Ḥamza as Imām in the preceding year (407 = 1016), for the latter says in his epistles that Darazī had been won over to the unitarian religion by the Ma'dhūn (a missionary of low rank) 'Alī b. Aḥmad Ḥabbāl.

In Cairo he entered the service of the Caliph al-Ḥākim bi amri 'llāh and at first enjoyed his favour. He then tried to supplant Ḥamza; by 409 (1018) he had around him partisans called after him Darazites whom Ḥamza persecuted; the most important of them was Bardha'ī. There still exist writings of Ḥamza in which he speaks of Darazī's undertakings; he calls him, "the insolent one, the Satan" and describes him as opposed to the Imām, i. e. himself, he also complains that he has "gone from beneath the cloak of the Imām" and taken the title *Saif al-Īmān* or "Sword of the Faith" (409 = 1018).

Darazī was the first publicly to recognize the divinity of the Caliph Ḥākim; according to him, universal reason became incarnate in Adam at the beginning of the world and passed from him into the Prophets, then into 'Alī and thence into his descendants, the Fāṭimid Caliphs. Darazī wrote a book to develop this doctrine, which was only an application of that of the previous Bāṭinī system. He read this book in the principal Mosque in Cairo and, although Ḥākim did not protest, this doctrine caused a scandal. It is also said that he allowed wine, the forbidden marriages and taught metempsychosis.

According to Abu 'l-Maḥāsin, Darazī in consequence of the scandal which arose, had to retire to Syria; there he preached his doctrine to the mountaineers, especially in the valley of Taim-Allāh and the Bāniyās [q. v., p. 648] territory. He came into conflict with the Turks and fell in a battle against them.

John of Antioch and, following him, al-Makīn do not give this account of his end; according to them he was killed by the Turkish pages, on account of the scandal which his teaching caused, in Cairo while actually in Ḥākim's carriage. After his death his house was pillaged, and there was a riot for three days in the city, the gates of which had to be closed. The Turk who had slain him was arrested and put to death on another pretext. The Druze sources would lead one to believe that it was at Ḥamza's instigation that he was assassinated; several of his followers, including Bardha'ī, shared his fate (410 = 1019).

Bibliography: S. de Sacy, *Exposé de la Religion des Druzes*, Vol. i., Introduction, p. ccclxxxiii.—ccclxxxiv.; Vol. ii., pages 157 *et seq.*, 170, 190; John of Antioch. *Chronique*, ed. Cheikho, Carra de Vaux et Zayāt. (B. CARRA DE VAUX.)

DARB (A.), plural *durūb*, "passage, pass, or road". *Al-darb* was more particularly any road into the land of the Byzantines (cf. e. g. Balādhurī, p. 137. 2), such as the roads over the Taurus and the pass over Amanus (Beilān pass, q. v., p. 690), more especially those through the Pylae Ciliciae from Ṭarsūs via Badhandūn = Podandos (see BOZANTI, p. 768) and Lu'lu'a = Lulon to Tyana and Heraclea, and the eastern route from Mar'ash (Germanicia) via Ḥadath to Malaṭya. These notoriously difficult passes were euphemistically called *Darb al-Salāma* (cf. Ibn Khordādhbih, p. 100 or Balādhurī, p. 189 *et seq.*) The district around the Taurus passes north of Djaihān bore the name *Bilād al-Durūb* in the time of the Armenian kingdom of Cilicia (see Ibn Faḍl Allāh al-'Omarī, *Ta'rīf*, p. 181 and 183; Ibn al-Athīr, xi. 20 and 145).

As the word *al-Darb*, which in its technical sense appears as early as Imru 'l-Ḳais, cannot be

explained from the Arabic, the name is usually derived from the name of the little town of Derbe in Asia Minor. The meaning (*durūb* = κλεισοῦραι) rather suggests a connection with the Persian *darband* (cf. the name *Djibāl al-Darbandāt* for the Armenian Taurus in ʿOmarī, *op. cit.*, p. 56). Perhaps *al-darb* and Derbe are really both to be explained from some language indigenous to Asia Minor. One difficulty is the fact that the word appears in Arabic from the very first with the meaning of a *nomen proprium* but the form of an *appellativum* (whence the article) and gradually becomes quite naturalized in the language with the general meaning of "gate", "way", "road" (cf. expressions like *Darb al-Ḥadjdj*, *Darb al-Sulṭān*).

Bibliography: G. Le Strange, *Eastern Caliphate*, p. 122, 133 *et seq.*; Quatremère in Maḳrīzī, *Sultans Mamlouks*, ii. 1, p. 147; H. Lammens in *Mélanges de la Fac. Or.*, *Beyrouth*, i. 15. Sarre, *Reise in Kleinasien*, p. 86, should also be specially noted.

(R. HARTMANN.)

ḌARB (A.) "blow", "striking" (whence *ḍarbkhāna*, "mint"); in arithmetic = multiplication, in metre = last foot of the second half line.

DARBUKKA or *darabukka* in Egypt, *dirbakki* in Syria, *darbūka* in the Maghrib; given as a neologism by Arab lexicographers in the form *darābukka*: a kind of drum, consisting of a tube enlarged or expanded at one of its ends; this end is covered with a skin (fish-skin in Egypt and goat-skin in the Maghrib) and the other is open. In the east the tube of the *darabukka* is usually of wood or earthenware (often painted or decorated) but occasionally though more rarely of copper. To play on this instrument it is placed under the forearm, with the large and covered end outermost and the skin is struck alternately with the fingers of the two hands. In Egypt the *darabukka* is an instrument used by jugglers, and street singers, also by women and the boatmen of the Nile. In the Maghrib the *darbūka* is played by women; it also forms one of the essential elements of the classical town orchestra and contributes to the rhythmic harmony which characterises the music of this orchestra. The word is of foreign origin; but its etymology is disputed (cf. Dozy, *Supplément aux Dictionnaires Arabes*, i. p. 430; Vollers, in the *Zeitschr. der Deutsch. Morgenl. Ges.* 1897, p. 326).

(W. MARÇAIS.)

DARD, or KHWĀDJA MĪR DARD, was a descendant of Khwādja Bahāʾ al-Dīn, the founder of the Naḳshbandī order of the Ṣūfī sect who was born at Bukhārā in A. H. 728 and died A. H. 791. His father, Khwādja Mīr Nāṣir, poetically called ʿAndalīb, belonged to an ancient and highly respected family of Dihlī descended from Nawwāb Djaʿfar Khān, a noted general of the time of the emperor Djahāngīr. He held a military appointment, but eventually renounced the world and was initiated into the Naḳshbandī order of devotees under the tutorship of Khwādja Muḥammed Zabīr.

Khwādja Mīr Dard, like his father, was originally a soldier by profession, and became a religious devotee. His biographer, Mawlawī Muḥammad Ḥusain, Āzād, states in the *Āb-i Ḥayāt* (2nd ed. p. 170) that Dard wrote a treatise on prayer, entitled *Asrār al-Ṣalāt*, when he was only 15 years of age, and a work, called *Wāridāt-i Dard*, at the age of 29, to which he composed an extensive commentary, entitled *ʿIlm al-Kitāb*, comprising 111 treatises on Ṣūfic mysticism. He is also the author of other religious works, a short Dīwān in Persian, and an Urdu Dīwān, which has been frequently lithographed at Dihlī. He was contemporary with Saudā, Mīr Taḳī and Maẓhar, and had numerous pupils, chief of whom were Ḳiyām al-Dīn Ḳāʾim, Hidāyat Allāh Khān Hidāyat, and Thanāʾ Allāh Khān Firāḳ. According to most biographers Dard died at Dihlī at the age of 68 in A. H. 1199 (A. D. 1785), but Mīrzā Luṭf in his Tadhkira *Gulshan-i Hind* gives A. H. 1202 as the year of his death.

(J. F. BLUMHARDT.)

DARDANELLES, in Turkish *Ḳalʿa-i Sulṭānīya Boghazi*, the ancient Hellespont, a strait which joins the Archipelago to the sea of Marmora (Propontis), and separates Europe from Asia (44 miles long and one to five miles broad). Its shores are covered with fortifications which guard the approach to Constantinople and are armed with Krupp guns of large calibre; their garrison consists of two regiments of unmounted artillery and one of engineers. The forts and batteries on the Asiatic side are: Ḳalʿa-i Sulṭānīya, Ḳūm Ḳalʿa, Ḥamīdīya (recent), Madjīdīya (formerly Kiösse-burnu), Nagharā (Abydos); on the European coast: Sadd al-Baḥr, Ḥawnalar, Madjīdīya (recent), Namāzīya, Kilīd-i Baḥr, Degirmen-Burnu, Čam-Burnu, Maidōs, Boḳali-Ḳalʿa, Kilia-Tapa (Sestos). They were entirely rebuilt in 1659 under the administration of the Grand Vizier Muḥammad Köprülü. — The town of Dardanelles (*Ḳalʿa-i Sulṭānīya*, popularly called *Čanaḳ-Ḳalʿa* = the fortress of the potteries), capital of the sandjāḳ of Bigha which is directly under the Sublime Porte and is not attached to a *wilāyet*, was until 1876 the capital of the province of the Islands of the Archipelago; it was attached in May 1881 to the *wilāyet* of Ḳarasi, since abolished. There are twelve potteries in it, none of which are older than 1740; this industry, now declining, supplied ordinary earthenware and vases of strange forms (notably horses or quadrupeds usually taken for the Trojan Horse) painted in brilliant colours and gilded in parts. The Frankish quarter which is close to the shore, was built after a fire in 1860; the other quarters were, for the same reason, rebuilt in 1865. The population is 11,062 of whom 3,551 are Muhammadans and 2,577 Greek Orthodox; the Armenians originated for the most part in Persia whence they came in the reign of Sulṭān Sulaimān (1529); the Jews, for whose presence here there is evidence in 1660, are refugees banished from Spain in 1492. The total population of the Ḳaḍā is 19,494 of whom 9,059 are Muḥammadans and 5,501 Greek Orthodox; the 1,805 Jews and 2,173 foreigners are found only in the town itself. There are numerous beautiful forests in the district and gold mines at Astyra and ʿOsmanlar.

(CL. HUART.)

AL-**DARDJĪNĪ**, ABU 'L-ʿABBĀS AḤMAD B. SAʿĪD B. SULAIMĀN B. ʿALĪ B. IKHLAF, an Abāḍī scholar of the viith century A. H. to whom we owe the *Kitāb Ṭabaḳāt al-Mashāʾikh*, an historical and biographical collection which has not yet been

published though there is a manuscript in Mzāb.

Abu 'l-Abbās's work falls into two distinct parts. The first is merely a reproduction of the *Chronicle* of Abū Zakariyā, (translated by M. Masqueray, Algiers 1878) to which have been added some personal observations and reflections. The second contains the detailed biographies of the principal members of the Abādī sect, both African and Oriental, arranged chronologically by *ṭabaḳat*, each of which covers 50 years, from the earliest years of Islām to the end of the viith century A. H.

For the latter volume, Dardjīnī made use of a list drawn up by Abū 'Ammār 'Abd al-Kāfī of Wargla, to the end of the eleventh *ṭabaḳa*. To this he added the biographies of the celebrities in the twelfth *ṭabaḳa*. (Cf. the table in the *Kitāb al-Ṭabaḳāt*, Vol. II., given by M. de Motylinski, in his *Livres de la secte Abadhite*, p. 30 *et seq.*; Algiers, 1889).

Dardjīnī's work is valuable for the history of the Abādīs of the Maghrib. It contains valuable information for the groups of oases of Wargla, the Wād Rīgh, and the Sūf where Waḥbī Berber communities lived after the fall of the Rustamids.

The *Kitāb al-Djawāhir al-Muntaḳāt*, written in the ixth century A. H. by an Abādī of note of the Djabal Dummar, Abu 'l-Ḳāsim b. Ibrāhīm al-Barrādī, gives an interesting account of the genesis of the *Ṭabaḳāt*: "Here follow" says al-Barrādī, "the circumstances under which the book of Abu 'l-'Abbās was composed. — Al-Ḥādjdj 'Īsā b. Zakariyā had just arrived from 'Omān, bringing with him various works, such as the *Ḥall* of Ibn Yūsuf, the *Dīwān* of Shaikh Abu 'l-Ḥasanī, that of Ibn Dja'far and other important books. His brothers in the East had asked him to send them a book containing the biographies of the Abādīs of the earlier centuries of the Hidjra and retracing their virtues to their ancestors in the west. Al-Ḥādjdj 'Īsā consulted the learned *'Azzāba* who were then in Djerba and told them of the desire expressed by their co-religionists in the east. They thought at first of Abū Zakariyā's work but they saw that it was not complete and that the style of its author, used to the Berber language and little bound by the rules of Arabic grammar and the exact use of terms, was often defective. They then decided that a new work should be composed giving the history of the Rustamids and the virtues of the ancient doctors. No one was more fitted than Abu 'l-'Abbās to carry out this task in a worthy manner and it was to him therefore that it was entrusted".

According to a passage in the *Kitāb al-Djawāhir* (p. 219), Dardjīnī went to Wargla in 616 and spent two years there. (A. DE MOTYLINSKI).

DARESSALAM, capital of German East Africa. Daressalam is built in 6° 49′ South Lat. and 39° 16′ East Long. (Greenw.) in the form of a semicircle around a deep arm of the sea which here forms an excellent harbour; whence its name, a contraction of Bandar al-Salām ("haven of welfare") as educated natives still call it. The form Dār al-Salām is due to a popular etymology invented by Europeans. In spite of its favourable situation Daressalam is quite a modern town. In mediaeval times the most important town in this district was Kilwa, farther to the south and at a later period, Zanzibar. The terminus of the main caravan route from the interior was not Daressalam but the adjoining town of Bagamoyo. The little fishing villages situated there first attained some importance when Saiyid Madjid, Sulṭān of Zanzibar, began to build a palace there in 1862. From this period dates the main thoroughfare Barrazasta (now called "Unter den Akazien") and the two large houses around which the Wissman Fort was afterwards built. The prosperity of the town only began with the German occupation. When the coast-lands were still officially under the sovereignty of the Sulṭān of Zanzibar, Daressalam was already a station of the German East African Company to which on the 28th April 1888 the government, administration, customs etc. were handed over. This measure resulted in the great Arab rising (1888—1890), during which the company were only able to hold Daressalam and Bagamoyo out of all their stations. After the suppression of the rising the whole coast was placed under German protection (1st January 1891) and Daressalam became the residence of the Imperial governor.

At first a quiet but imposing town of officials with broad streets and numerous official buildings, Daressalam has now become one of the commercial centres of East Africa. It is connected with the interior by a railway. The line has already reached Tabora (500—600 miles from the coast) and is to be extended to Lake Tanganyika. Great European firms have permanently transferred their headquarters from Zanzibar to Daressalam, which, unlike the Oriental Zanzibar, is a European city on African soil. The town has 30,000 inhabitants, of whom 600—700 are Europeans, while the administrative district of the same name has about 190,000 of whom 830 are white and 2500 foreign non- Europeans (Arabs, Indians, etc.)

Islām, as along the coast, has made a deep impression on Daressalam. The Suaheli population of the coast, who speak a Bantu dialect, is quite Muḥammadanised. They are Shāfi'is and are supposed to have been converted to Islām by Arabs from Ḥadramawt in the viiith century, if not earlier. There were already Shāfi'īs in Kilwa when Ibn Baṭṭūṭa visited it. The orthodox creed and the Shāfi'ī ritual of the natives is also followed by the Arabs from Hadramawt who have frequently settled in Daressalam and all along the coast; they lead on the whole a wretched existence and are usually called Shiḥiri after the principal port of their native land. To a much higher level of society belong the Masḳaṭ Arabs, the lords of Zanzibar and former owners of the land. They are Ibāḍīs. Though not occupying so high a position, by far the wealthiest of the non-European inhabitants of Daressalam are the Indians, of whom roughly two thirds profess Islām. They come from the Gudjarāt coast and have also brought the innumerable castes of their native land to East Africa. The three main groups are the three commercial castes, the Khōdja, Bōhorā [q. v., p. 738] and Maiman. The Maiman are Ḥanafis, the Khōdja and Bōhorā are in the main Shī'a of the Ismā'īlī sect, while the Khōdja represent the Nizārite branch (whose religious chief is the Āghā Khān in Bombay) and the Bōhorās champion the claims of Musta'lī; they are also called Ismā'īlī and their religious chief is the Mullāyi in Sūrat. Many members of the Khōdja congregations have gone over to the so-called Twelvers (the so-called Ithnā'asharīs, also called Senashari in Suaheli) and conversions to the Sunni sect have taken place from the

Bōhorās. At the present day there are 8 mosques in Daressalam, of which 2 belong to the 2 Khōdja groups and 2 to the hostile Bōhorā communities; one is Ibāḍī, 2 Sunnī and one — also Sunnī — belongs to the people from the Comoros.

Jahresberichte herausg. vom Reichskolonialamt*; Hans Meyer, *Das Deutsche Kolonialreich* (Leipzig 1909); Erich Obst in *Das überseeische Deutschland*, ii. (Stuttgart 1911); Leue, *Dar es-Salaam* (Berlin 1903); the Muhammadan authorities have been utilised and cited in C. H. Becker, *Materialien zur Kenntnis des Islam in Deutsch-Ostafrika* (*Der Islam*, ii., 1 *et seq.*); cf. also more recently W. Klamroth, *Der Islam in Deutsch Ostafrika* (Berlin 1912). (C. H. Becker.)

DĀRIM was the son of Mālik b. Ḥanẓala b. Mālik b. Zaid-Manāt b. Tamīm. His name was originally Baḥr and he was called Dārim because on one occasion he came to his father with the family purse, walking with short steps (cf. *Ḳāmūs*, *sub voce*).

The tribe of Dārim had their location in al-Yamāma (cf. Wüstenfeld, *Genealog. Tabellen*). On one occasion a Dārimī killed unwittingly the youngest brother of ʿAmr b. Hind. ʿAmr in revenge swore that he would kill a hundred men of Ḥanẓala, whom Ṭaiy, to pay off an old score, had accused of the homicide. He slew ninety-eight men of Dārim and completed the number with a man of the Barādjim (whence the proverb, Maidānī, *Arab. Prov.* i. 5) and a woman of Nahshal. The Barādjim were sons of Ḥanẓala and Nahshal a son of Dārim. The chief of Dārim at this time was Zurāra. He was succeeded by his son Ḥādjib who was in great favour with Nuʿmān Abū Ḳābūs the king of al-Ḥīra, so much so that he persuaded the latter to transfer the privilege of the Ridāfa from the Yarbūʿ branch of Tamīm, who had long held it, to Dārim. Yarbūʿ, however, refused to give it up. In the year 9 A. H. Tamīm submitted to Muḥammad and professed Islām. In the interview with Muḥammad on that occasion their spokesman ʿUṭārid was of the tribe of Dārim, whom he extolled as the noblest Arabs in the Ḥidjāz. Dārim was one of the branches of Tamīm which revolted against Abū Bakr under their chief al-Aḳraʿ, when they threw in their lot with the prophetess Sadjāḥ; but they were among the first to submit to Khālid b. al-Walīd. The member of the tribe of Dārim whose name is best known is al-Farazdaḳ the poet (d. 110 A. H.). Another member was Sawra b. al-Ḥurr (Ṭabarī ii. 1418).

Bibliography: Caussin de Perceval, *Essai*, ii. 121 *et seq.* (T. H. Weir.)

al-**DĀRIMĪ**, Abū Muḥammad ʿAbd Allāh b. ʿAbd al-Raḥmān b. al-Faḍl b. Bahrām b. ʿAbd al-Ṣamad al-Tamīmī, was born in 181 (5th March 797—21st February 798) at Samarḳand where he died on the 8th or 9th Dhu 'l-Ḥidjdja 255 (18th-19th November 869).

In his search for Islāmic Traditions he travelled through Khorāsān, Syria, ʿIrāḳ, Egypt and the Ḥidjāz, and studied under: Abu 'l-Yamān al-Ḥakam b. Nāfiʿ, Yaḥyā b. Ḥassān, Muḥammad b. ʿAbd Allāh al-Raḳḳāshī, Muḥammad b. al-Mubārak, Ḥibbān b. Hilāl, Zaid b. Yaḥyā b. ʿObaid al-Dimishḳī, Wahb b. Djarīr, etc. Among his pupils were: Muslim, Abū Dāʾūd, al-Tirmidhī, al-Nasāʾī except in his *Sunan*, ʿAbd Allāh b. Aḥmad b. Ḥanbal, ʿĪsā b. ʿOmar al-Samarḳandī, etc.

Appointed ḳāḍī of Samarḳand, he only judged one case and resigned. He was pious, fervent, of keen intellect and poor.

He is the author of the following works:

1°. *al-Musnad*, a collection of Ḥadīth, edited for practical use: the Traditions are classified in chapters following the order in the law-books; it was lithographed at Cawnpore in 1293;

2°. *al-Tafsīr* and 3°. *Kitāb al-Djāmiʿ* considered lost.

(Moh. ben Cheneb.)

ḌARĪYA, a district in Central Arabia, so-called after a well with a village beside it on the road from Mecca to Baṣra, 32 Arab miles from Djadila, 18 (according to Ibn Rusta, 28) miles from Ṭikhfa. According to the Arabs, it took its name from Ḍarīya, the daughter of Rabīʿa, the mother of the Ḳudāʿī Ḥalwān. It was a much frequented halting-place for pilgrims, for here was the junction with the road from Baḥrain. It was under Medina for administrative purposes. The district of Ḍarīya, of whose wells and mountains al-Bakrī gives a detailed account, included the area, called Hemmey (probably = *Ḥimā*) on Doughty's map and described as good pasture land, but also extended to the northwestern side of the hill of al-Nīr. It was chiefly inhabited by the B. Kilāb, against whom Muḥammad sent troops led by Abū Bakr in the years 6 and 7 A. H. The Caliph ʿOmar reserved a portion of it as *ḥimā* for the camels given as *ṣadaḳa* and taken in war (cf. Ibn Saʿd, iii. 1, p. 220, 13 and 236, 3); but as the number of these animals was always increasing and reached the total of 40,000 in ʿOthmān's reign, this Caliph considerably extended the area set aside for them, which was reckoned against him (*Kāmil*, ed. Wright, p. 606, 6). The land afterwards became private property and is said to have yielded an annual tribute of 8000 dirhems in the early ʿAbbāsid period.

al-**DARʿĪYA** (Dreyeh, Deraya, Daraiije, or Draiia) a town in the district of al-ʿĀriḍ in the Nadjd country in Arabia, on the

caravan route from the Red Sea to the Persian Gulf. It was handsomely built of stone and lay at the foot of high hills in a narrow valley, and a little *wādī* (W. Ḥanīfa) which was usually dry in summer ran through it. In addition to a large and several smaller mosques it had many madrasas. It lay in a very fertile neighbourhood and was surrounded by extensive wheat, barley and millet-fields and rich orchards with extensive date-palm groves, peach, apricot and fig-trees. The very fine breed of horses, raised in this district, was famed throughout Arabia. It was inhabited by the great tribe of ʿAnaza amongst others. It attained its greatest prosperity when at the end of the xviiith and beginning of the xixth centuries it became the capital of the Wahhābī kingdom [q. v.] under the independent rulers Saʿūd, ʿAbd al-ʿAzīz and ʿAbd Allāh. In 1818, it was taken by storm after stubbornly resisting a five months' siege by the Egyptian general Ibrāhīm Pasha and almost levelled to the ground by fire; the splendid orchards and date-palm groves surrounding were mostly reduced to ashes. The Wahhābīs considered it unlucky to rebuild the town and transferred their capital to the town of al-Riʾāḍ, some 7 miles distant. At its zenith, Darʿīya had about 30,000—40,000 inhabitants (according to many estimates, nearly 60,000). At the present day there are about 1500 people scattered around the district chiefly at the time of the date harvest.

The only European, to visit Darʿīya in the time of its glory, was Reinaud, an Englishman who visited the ruler ʿAbd al-ʿAzīz in April 1805 on a political mission from Manesty, the English resident in Gran on the coast. Captain Sadlier saw it soon after its destruction; he was commissioned by the Indian government to pay its respects to the victorious Ibrāhīm Pasha in his camp at Darʿīya. In more recent times it has been visited by the traveller Palgrave.

DAROGHA (T.) "governor", "chief of police". Cf. Yule and Burnell, *Hobson-Jobson*², p. 297.

AL-**DĀRŪM** is mentioned by Muḳaddasī as the district in which Bait Djabrīn [q. v., p. 597] was situated. It is the Hebrew Darom, the South, which term the Jews particularly applied to the southwest plain on the coast of Judaea and appears in Eusebius (who distinguishes it from Eleutheropolis) as Daroma. It is wrongly described by certain Arab historians as the goal of the expedition, on which Muḥammad shortly before his death was going to send Usāma b. Zaid; its real objective was, as is clear from the account of the campaign which was afterwards carried out, the southern lands east of Jordan.

The name al-Dārūm was afterwards transferred to a fortress on the road from Ghazza to Egypt, which king Amalrich built on the ruins of a monastery of the same name. After an unsuccessful attempt in 566 (1170) Ṣalāḥ al-Dīn succeeded in taking this stronghold in 584 (1188) along with the adjoining coast-towns; but in 588 (1192) it was taken and destroyed by Richard I. The site is marked by the ruins of Dēr al-Balaḥ, 14 miles S. W. of Ghazza.

DARWĪSH. [See DERWĪSH.]

DARYĀ (Old Persian *drayah*, Pahlavi *daryāb*) in Persian, sea or large river. *Daryā-i Khazar* is the Caspian Sea; *Amū-Daryā* [q. v., p. 339] and *Sīr-Daryā* are the Oxus and Jaxartes of the ancients, the Djaiḥūn and Saiḥūn of the Arabs. The south coast of Lāristān and Kirmān bears the name *daryā-bār* (Quatremère, *Not. et Extraits*, xiv. 281, note 1). The naval commander at Bandar-ʿAbbās bears the title *daryā-begi*; among the Ottomans, this name has been sometimes given to the Ḳapūdān-Pasha or Admiral-in-Chief; the *daryā-ḳalami* were, before the reforms, the administrative offices of the Islands of the Archipelago. — *Daryā-i-nūr*, "sea of light", is the name of one of the large diamonds in the crown of Persia (Polak, *Persien*, i. 374). — *Daryā-i-rūd* is a river which rises in Mount Sabalān (Savalān) in Ādharbaidjān and flows to the north into the Arax; its name is connected by W. Jackson (*Zoroaster*, p. 194) with the Zend *daraj*, Pahlawi, *dārejat*, the name of the river on the banks of which Zoroaster was born according to the Vendīdād (xix. 15) and the Bundahish (li. 3). (CL. HUART.)

DARYĀ-I SHĀHĪ. [See URMIYA.]

DASKARA, the name of three places in the ʿIrāḳ, viz.: 1. a town on the Diyāla, N. E. of Baghdād; 2. a village in the district of Nahr al-Malik, W. of Baghdād; 3. a village near Djabbul on the road to Khūzistān. Cf. Yāḳūt, *Muʿdjam* (ed. Wüstenfeld), ii. 575; *Marāṣid al-Iṭṭilāʿ*, *Lexic. Geogr.*, ed. Juynboll, (Lugduni, 1850 *et seq.*), i. 402; iv. 468. Daskara is a word borrowed from the Iranian and arabicised from the Pehlevi *dast(i/a)karta*, mod. Pers. *dast(ī/a)gard* = literally "handmade, a work of the hands", whence it means also "building, village, town". On this word s. Djawālīḳī, *al-Muʿarrab* (ed. Sachau), p. 67; Vullers, *Lexicon Persico-Lat.*, i. 871, 872, 878 (s. v. *Daskara*, *Dastikār*, *Dastkara*); Fleischer in Levy, *Chaldäisch. Wörterb.*, ii. 577 (gegen ii. 430ᵃ); Perles, *Etymol. Studien*, p. 83; H. Hübschmann, *Armenische Grammatik* (1897), p. 135. The best known is Daskara 1; for further information see the article DASTADJIRD. (M. STRECK.)

DASTADJIRD, the name of a number of places on Iranian soil or within the bounds of the former Sāsānian Empire (ʿIrāḳ). The *Mushtarik* gives ten places of this name; the Arabs usually give the Arabicised form Daskara to those in the ʿIrāḳ; for the meaning of Dastadjird = Daskara see the article DASKARA. The most important was Dastadjird (= Daskara 1) on the Diyālā, N. E. of Baghdād, 16 parasangs (c. 64 miles) from the latter, just above the 34° N. Lat. The Arab historians ascribe the foundation of this town to the Sāsānian king Hormizd I b. Shāpūr (383—385 A.D.). This probably was however only a refoundation on the site of older settlements; for the Artemita of Strabo must be located practically on this spot. Dastadjird attained its greatest prosperity under Khusraw II Parwīz (590—628), who made it his permanent residence and erected a number of splendid buildings. As it was the favourite abode of this king, the town was called Dastadjird-i Khusraw or Daskarat al-Malik i. e. D. of Khusraw or of the king, to distinguish it from other places of the same name. Cf. also Δασταγερ-χωσάς (*Chronicon Paschale*) and Deskarthā dᵉ Malkā (Guidi, *Syr. Chronik*, publ. in the *Verhandl. des viii. Orientalisten-Kongr.*, Sect. 1ᵇ, 21); as a rule Byzantine and Syrian authors write simply: Δασταγέρδ (also Δασταγέρ) or Deskarthā or Destkarthā; in the Talmud: Diskarthā (s. Berliner, *Beitr. z. Geogr. u. Ethnogr. Babyloniens im Talmud*, 1883, p. 30).

The period of Dastadjird's glory did not last a quarter of a century and was suddenly closed by the great Asiatic campaign of Heraclius, so disastrous to the Sāsānian Empire. In the early part of the year 628 the capital abandoned by Khusraw fell into the hands of the Byzantine Emperor; it was sacked and reduced to a heap of ruins; immense booty was carried from it to Constantinople. On this conquest cf. E. Gerland in the *Byzantin. Zeitschrift*, iii. 368 *et seq.* Dastadjird was never able quite to recover from this crushing blow; this is sufficiently explained by the fact that only a few years later the Sāsānian Empire, considerably weakened by the Byzantine wars, finally collapsed before the vigorous onslaught of the Arabs.

In the Muḥammadan period a small town again arose on the imposing ruins of regal splendour, which at a later period still excited the wonder of the Arab geographers (cf. in particular the accounts of Yaʿḳūbī and Ibn Rosta); it was of some importance as a caravan station on the great highroad from Babylonia to the Iranian highlands (the so-called *Ṭarīḳ Khorāsān*). Iṣṭakhrī and Ibn Ḥawḳal describe it as a flourishing place surrounded by date-groves and cornfields. It is not known when the Arab Dastadjird became deserted. It probably was ruined like so many other, once busy, towns in the ʿIrāḳ by the Mongol invasion so disastrous to progress.

Even at the present day there are considerable relics of the Sāsānian and Muḥammadan periods of Dastadjird. The latter name has however now utterly disappeared from the district; the ruins are usually know as Eski-Baghdād = "Old Baghdād", a name also given to other ruins in the ʿIrāḳ, which is to be explained from the rather common Turkish custom of naming ancient ruined sites after important towns in the neighbourhood. Cf. above p. 564 and Ritter, *Erdkunde*, x. 216; xviii. 934 *et seq.*, 972; xix. 627. The ruins of Dastadjird were visited and described on several occasions in the xixᵗʰ century by European travellers, e. g. von Keppel (see Ritter *op. cit.*, ix. 502), C. Rich and H. Rawlinson. The latest account is from the pen of E. Herzfeld, who spent some time there in September 1905. According to his account the ruins are about 9 miles south of Shahrabān, left of the Diyālā, across the Mahrūd, and are surrounded by swampy, pathless, almost impenetrable ricefields. Three groups of ruins may be distinguished: 1. the Zindān, a city-wall flanked by towers of which 11 have survived. The Persians also give the name Zindān = "prison" to other ruins elsewhere whose real origin and use is unknown to them as well as to remarkable natural features (caves): cf. Zindān-i Sulaimān near Mashhad Mādar-i Sulaimān (plain of Murghāb), and at Takht-i Sulaimān (in Ādharbaidjān) and Zindān Iskandar near Yazd. Zindān is clearly identical with the building outside Dastadjird, surrounded by a high wall mentioned by Ibn Rosta, which he calls a prison (*sidjn*) of the Sāsānian kings. Iṣṭakhrī and Ibn Ḥawḳal describe it as a fortification of clay. 2. The Dulāb, 1 mile north of Zindān, the ruins of a second city wall built of brick in the usual Sāsānian style. 3. Eski-Baghdād, 2 miles north of Dulāb, the ruins of Dastadjird proper, ruins occupying a quadrangular area of about half a square mile surrounded by a wall with round towers. The ruins in this area are undoubtedly those of the Islāmic town. In Zindān and Dulāb may be identified one of the Sāsānid palaces (Babdarch, Rakial, etc.) the existence of which in the neighbourhood of Dastadjird is mentioned by the Byzantine historian Theophanes. The latter also gives Βαρασρώθ (Theoph., *Chronogr.*, ed. de Boor, p. 321) as a name of the district of Dastadjird, in which form we may readily recognize the ancient name of the district under the Sāsānian system of partition of the country; among the Arabs (cf. e. g. Yāḳūt, i. 534, 793, 813): Barās al-Rūs, still used in the form Bilād al-Rūz with a popular Arabic etymology (probably = rice-district; *rūz* = *ruzz*); see also the new Arabic periodical, *Lughat al-ʿArab* (Baghdād), i. (1911-1912), p. 369 *et seq.*

DASTŪR (P.). The name of the priests among the Parsis, vizier, custom, a percentage, fixed by custom, on cash payments, etc., cf. Yule and Burnell, *Hobson-Jobson*, s. v. Dustoor and Dustoor.

AL-**DASŪḲĪ**, AL-SAIYID IBRĀHĪM B. IBRĀHĪM (ʿABD AL-GHAFFĀR), a descendant of Mūsā, brother

of the Ṣūfī Ibrāhīm Dasūḳī (see the next article) born in 1226 = 1811 in a poor family following the Mālikī ritual. After completing his elementary education in his native place of Dasūḳ, he attended the lectures of distinguished Shaikhs at the Azhar Mosque, among whom was the celebrated Mālikī Muḥammad 'Illaish (died 1299 = 1882). After himself lecturing in the Azhar for a short time, he entered the employment of the state in 1248 (1832) where on account of the accuracy of his knowledge of Arabic philology he received the office of corrector of the text-books destined to be used in the higher educational institutes and was ultimately appointed *bash-muṣaḥḥiḥ* (chief reader) at the government printing office in Būlāḳ in the time of the Khedive Ismā'īl Pasha. He was for a period also assistant editor of the official gazette *al-Waḳā'i al-Miṣrīya*. He died in 1300 = 1883. — His claim to a place in this work is based on the fact that, on the recommendation of Fresnel, he was employed during E. W. Lane's (Manṣūr Efendi) second residence in Cairo with him for several years as a trusted collaborator in the preparation of and collection of material for Lane's *Arabic-English Lexicon*, for which Lane in his preface gives him a glowing testimonial. Even after Lane's return to England, Dasūḳī continued to assist him with extracts from Arabic works (Preface, i. xxii. xxiii.). We possess a memoir prepared for the former Egyptian minister 'Alī Mubārak's encyclopaedic work in *Saff* from the pen of Dasūḳī in which he describes his meeting and intercourse with Lane, his impression of his personality, his domestic arrangements and mode of life in Cairo, his intercourse with Muslims there (including Shaikh Aḥmad, immortalised in the preface to the *Manners and Customs of the Modern Egyptians*), his singular mastery of the Arabic idiom ("as if he were an 'Adnānī or a Kaḥṭānī"), their joint method of studying the authorities on Arabic philology and their work on the utilisation of these materials for the *Lexicon*, Lane's generosity to his Arab collaborators, etc., in the fullest detail. This article is an important document for the biography of the great English Arabist.

Bibliography: 'Alī Mubārak, *al-Khiṭaṭ al-Djadīda li-Miṣr al-Ḳāhira wa-mudunihā wa-bilādihā al-ḳadīma wa 'l-shahīra* (Būlāḳ 1305), Bd. xi. p. 9—13; S. Lane-Poole, *Life of E. W. Lane*, p. 117 *et seq.* (I. GOLDZIHER.)

AL-**DASŪḲĪ**, IBRĀHĪM B. MUḤAMMAD B. 'ABD AL-RAḤMĀN, an Arab mystic, born in 833 (1429) and died on the 9th Sha'bān 919 = 11th Oct. 1513 in Damascus, collected passages used in prayer, which have been preserved in a Berlin Ms. (Ahlwardt, *Verzeichnis*, No. 3778) (cf. al-Nu'mānī, *K. al-Rawḍ al-'Āṭir*, cod. Wetzst., ii. 289; Ahlw., *Verz.*, No. 0886, fol. 17b).

(C. BROCKELMANN.)

DĀTĀ GANDJ BAKHSH LĀHŌRĪ, whose real name was 'ALĪ B. 'UTHMĀN B. 'ALĪ AL-DJULLĀBĪ AL-HUDJWĪRĪ, an eminent Ṣūfī, was born at Ghaznīn. He is called al-Djullābī and al-Hudjwīrī, because he alternately resided in these two suburbs of Ghaznīn. He seems to have travelled through all the Muḥammadan world and to have made himself acquainted with all the eminent Ṣūfīs of his time, i. e. the 5th century of the Hidjra. In his latter days he settled in Lāhore, where he died in A. H. 465, (1072 A. D.). He wrote many books, of which the *Kashf al-Maḥdjūb* — a work treating of the lives, teachings, and observances of the Ṣūfīs — is the most widely known and read.

Bibliography: Rieu, *Cat. of the Persian Mss. Br. Mus.*, p. 343a; *Ḥadā'iḳ al-Ḥanafīya*, p. 197; *The Kashf al-Maḥjūb* by 'Alī b. 'Uthmān al-Jullābī al-Hujwīrī, translated by Reynold A. Nicholson, (*Gibb Memorial*, London, 1911).

(M. HIDAYET HOSAIN.)

DATHĪNA, a district in South Arabia, lying to the west of the land of the 'Awāliḳ [q. v., p. 514] in the Djebel Kawr. It is a fairly mountainous country with a dry climate, as a rule. The soil is fertile only in the N. E. where it produces tobacco, wheat and maize. The main *wādīs* are: the very fertile Wādī Marrān (Mirān) and the Wādī al-Dura. Dathīna is inhabited by two large tribes, the main branch, the Ahl um-Sa'īdī (Ahl al-Sa'īdī) and the 'Ulah (al-'Ulah, 'Ulah al-Kawr and 'Ulah al-Baḥr). The chief town is Blad Ahl um-Sa'īdī with several hundred inhabitants (including several families of Jews) and a large palace. The chief market of Dathīna is Hafa (also called Sūḳ Ahl um-Sa'īdī). Dathīna is nominally under the suzerainty of the Faḍlī [q. v.] but has to pay tribute to the upper 'Awāliḳ.

Dathīna is a very ancient country. Hamdānī gives a detailed account of it in his *Djazīra*. In his time it was larger than it now is and probably also comprised the territory now occupied by the 'Awdhilla [q. v., p. 516]. He calls it Ghā'iṭ, a dry unfertile land, a steppe, which description is still applicable to the greater portion of it. He says it is inhabited by the Banī Awd (the present 'Awdhilla), who speak very good Arabic. Of settlements in Dathīna he mentions: Akma(?), 'Arrān (also called al-Kukab or al-Rukub), Athira, al-Khanfus (Dhu 'l-Khanfus), al-Mwṣbḥ (the vocalisation is not given; it is said to have been the largest town in Dathīna) and al-Ẓāhira etc.; of Wādīs: Wādī Dathīna, al-Ḥār and Tārān, al-Ghamr, al-Ḥumaira, al-Ma'warān or al-Mi'warān, Mirān, Ṣaḥb and 'Urufān; of hills, besides Djebel Aswad (Black Mountain) and Rāiḥ, the Kawr (Kūr), which no longer belongs to Dathīna, but to the land of the 'Awdhilla.

The name Dafīna also appears in the geographers in addition to Dathīna. Several Dathīna are further mentioned. One is a town between Baṣra and Mecca and usually written Dafīna.

(Leiden 1905—1909). (J. SCHLEIFER.)

DĀ'ŪD (the Biblical David). The Ḳur'ān has several passages in which reference is made to the legend of the kingly prophet David, the *Khalīfa* of Allāh (*Sūra*, 38, 25). Like the legends of the other prophets, it has been somewhat corrupted and shows signs of Rabbinical influence or

of an effort to explain certain imperfectly known verses of the Bible. Muḥammad knew that David slew Goliath (Djālūt) (*Ḳor'ān*, *Sūra* 2, 252 *et seq.*) and that he received the Psalms from God: The Book of Psalms is one of the four volumes of the Bible with which Muḥammad was acquainted. David shares with Solomon the gift of wisdom (2, 252; 27, 15); together on one occasion they delivered a remarkable judgment in a case concerning the damage done by some sheep in a field. The commentators say that in this case, Solomon, though only 11 years of age, showed his wisdom by improving on the sentence passed by his father. In another passage, the case of two suitors is referred to, who came to David to reproach him with his fault in the guise of asking him to deliver judgment (38, 20—25). Mention is made of the repentance of David in Sūra 38, 16. The royal prophet is thought to be the inventor of coats-of-mail, that is to say he replaced by them the cuirasses of plates of metal. Iron seemed to become ductile in his hands (21, 80 and 34, 10); he had the gift of song; the mountains and the birds alternated with him in his songs (21, 79; 34, 10; 38, 17—18); this is evidently only the literal interpretation of verses in which the Psalmist invites the hills and beasts of the field to praise the Lord. Lastly by combining verses 5, 64 and 2, 61 of the Ḳor'ān we learn that David punished Sabbath-breakers by changing them into monkeys.

The brief references to David are considerably developed in the commentators and agree in the main points with the Bible: The following are the main points in Ṭabarī. Djālūt (Goliath), a descendant of the 'Ādites and Thamūdites, having attacked Ṭālūt (Saul), David slays him with his sling; he marries the daughter of Ṭālūt and shares his authority. Ṭālūt becomes jealous and tries to kill him; David flees and hides in a cave across the entrance to which a spider weaves its web, thus protecting David from Saul. Ṭabarī gives David's genealogy, tells the story of Bathsheba, wife of Uriah, David's repentance and the plan of building the temple; he also adds a few anecdotes.

Mas'ūdī knew the Miḥrāb Dā'ūd, built by this king in Jerusalem and still standing in this historian's time; it is, he says, the highest building in the city; from it one can see the Dead Sea and the Jordan. It is apparently the Citadel or Tower of David. Mas'ūdī had some slight acquaintance with the Psalms.

Down to the xivth century the Muslims like the Christians before them located the tomb of David in Bethlehem although other traditions regarding its site were known to them. In the Crusading period a tomb alleged to be David's was found on the southwest hill of Jerusalem. In the xvth century it was taken over by the Muslims who still regard it as particularly holy (cf. *al-Mashriḳ*, xii., 898—902; Kahle in the *Palästina-Jahrbuch*, vi. 74 and 86).

David is of a certain importance among the mystics. Djalāl al-Dīn Rūmī in his *Mathnawī* quotes him several times. The *Kashf al-Maḥdjūb*, a very early work on Ṣūfism, exaggerates in an almost absurd fashion the legends on the charm of his voice; the wild beasts, we are told in this work (p. 402-403), used to leave their lairs to listen to him; water ceased to flow and the birds fell from the sky. People followed him into the desert forgetting to eat and drink for days; many of his auditors perished in this state of ecstasy. On one such occasion 700 virgins and 12.000 men died. Some finer features of his character are given in the same work e. g. (p. 197): „Hate thy soul, for my love depends on thy hatred of it".

In Kurdistān there still exists a small sect of followers of David (Dā'ūdites); they live in the mountainous district of Kirind, near Khāniḳīn, and at Mandala, north of Baghdād; to them David is the most important of the Prophets. (See le Père Anastase, *La Secte des Davidiens* in *Mashriḳ*, 1903, N°. 2, p. 60—67).

(B. Carra de Vaux.)

DĀ'ŪD b. Khalaf al-Iṣfahānī Abū Sulaimān, the founder of the Ẓāhirīya school of Arab law, which regards only the literal meaning of the Ḳor'ān and Tradition as authoritative. Dā'ūd was born in Kūfa about the year 200 (815), but was brought up in Baghdād, afterwards studied in Baṣra and Nīsābūr (with Isḥāḳ b. Rāhwaihī) and returned to Baghdād where he died in 270 (883). Although his father belonged to the Ḥanafī school, he attached himself to the Shāfi'ī but went even further than they, as he rejected not only the *Ra'y* but also the *Ḳiyās*, by which he really denied the *Taḳlīd*, i. e. the unconditional adherence to the teaching of the Imām, which the Sunnī jurists consider necessary. He only nominally approved the validity of the consensus (*Idjmā'*) as he limited it to the companions (*Ṣaḥāba*) of the Prophet. His piety and ascetic life are much commended, but his literary labours were less highly thought of, so that nothing of them has survived, although he composed a great many works. But he collected many pupils around him and his teachings afterwards found a fanatical but highly gifted protagonist in Ibn Ḥazm [q. v.]. Cf. the article ẒĀHIRITES.

Litt.*, i. 183 *et seq.*

DĀ'ŪD PASHA, the name of several Ottoman officials of high rank.

1. Dā'ūd Pasha, Bāyazīd II's Grand Vizier, an Albanian by birth, was taken prisoner in his youth and brought up at the Imperial court; he began his career under Meḥemmed II, fought, as Beglerbeg of Anatolia, in the battle of Tardjān (1473) against Uzun Ḥasan (Sa'd al-Dīn, i. 537) and, as Beglerbeg of Rumeli, took part in the siege of Shkodra in 1478 (Sa'd al-Dīn, i. 564). In 888 (1483) he became Grand Vizier under Bāyazīd II. (Sa'd al-Dīn, ii. 216) and was deposed on the 4th Radjab 902 = 8th March 1497 (Sa'd al-Dīn *l. c.*; according to the Venetian *Report* in

von Hammer, *Geschichte des Osmanischen Reiches*, ii. 309 *et seq.* on the 3rd March) the reason alleged being that he had facilitated the flight to Persia of Mīrzā Aḥmad, a grandson of Uzun Ḥasan, who had married a daughter of Bāyazīd II. (Leunclavius, *Hist.*, p. 644 *et seq.*) He was sent in disgrace to Dimotika, where he died on the 4th Rabīʿ I. 904 (20th October 1498) (Saʿd al-Dīn, *l. c.*). While Grand Vizier he only twice took the field: in 892 (1487) he subjected the Warsak and Torghud-tribes in Ḳaramān (Saʿd al-Dīn, ii. 53 *et seq.*) and in 897 (1492) he accompanied the Sulṭān on his campaign against Albania (do., ii. 71). The great mosque built by him in Constantinople in 895 (1490) [q. v., p. 871a] is celebrated and after it one of the gates on the sea-walls on the Sea of Marmora is named (*Ḥadīḳat al-Djawāmiʿ*, i. 104 *et seq.*). His name also survives in the plain of Dāʾūd Pasha before the land-walls of the city, where the army assembled on leaving Constantinople for Roumelia; Dāʾūd Pasha had built a Serai there for himself (*Ḥadīḳat al-Djawāmiʿ*, i. 298, cf. Kantemir, *Gesch. des Osm. Reiches*, p. 428; v. Hammer, *Gesch. d. Osm. Reiches*, ii. 286 is quite erroneous).

2. Ḳara Dāʾūd Pasha, a Bosnian, brought up in the Imperial palace; in 1013 (1604) as Beglerbeg of Rumeli, and entrusted with several military expeditions in Asia Minor by Aḥmed I.; he accompanied the expedition against Eriwān in 1612 and was Kapudan-Pasha for a few days in Muṣṭafā I's first reign (1613); in the reign of Osmān II. he took part in the Chocim campaign in 1621. At the outbreak of the revolution against Osmān II. (May 1662) he was appointed Grand Vizier by the Janissaries on the proposal of Wālida Sulṭān, the mother of Muṣṭafā I., whose sister he had married, and carried out the execution of the dethroned Sulṭān (20th May 1622). He was generally abhorred for this cruel deed and was deposed in a few weeks on the 3rd Shaʿbān (13th June), subsequently brought to book and executed on the 7th Radjab I. 1032 (9th January 1623). His tomb is in the Mosque of Murād Pasha in the Aḳserai quarter (*Ḥadīḳat al-Djawāmiʿ*, i. 204). Cf. Ḥādjdjī Khalfa, *Fedhlike*; Naʿīma; von Hammer, *Gesch. des Osm. Reiches*, iv; Roe, *Negotiations*.

(J. H. Mordtmann.)

3. Dāʾūd Pasha, last Ottoman governor of Baghdād of the Mamlūk line, a Georgian slave born about 1188 = 1774, taken to Baghdād at the age of eleven and bought by Sulaimān Pasha; at the age of twenty-seven he was appointed *Khaznadār* (treasurer) to the governor; becoming the brother-in-law of Saʿīd Bey, son of Sulaimān, he was elected by the latter as steward (1229 = 1814) but almost immediately dismissed; dissatisfied he assembled a few Mamlūks, entrenched himself at Sulaimānīya (1231 = 1816) and demanded the office of *wālī*, which he received; he entered into his office without striking a blow (5th Rabīʿ II. 1232 = 22nd Febr. 1817) and had his predecessor assassinated. During the fifteen years his power lasted, he restored peace to the country by pacifying the Yazīdīs and the ʿAnezes (1234 = 1818); he prevented the advance of the Persian Army, contributed to the suppression of the Janissaries, carried out numerous public works (canals dug, mosques repaired or built) and instituted manufactures of cloth and gun-factories; he engaged a French officer, Deveaux, whom he took from the Persian service to drill a body of ten thousand regular soldiers which he had created (1824). His delay in forwarding the contribution demanded by the Porte at the conclusion of the war with Russia decided the government to put an end to the practical independence which the province of Baghdād enjoyed; Ṣādiḳ-Efendi, entrusted with the task, was strangled by trusty emissaries of Dāʾūd who tried to fight but was defeated, rather by floods and pestilence, than by the military operations conducted against him (1247 = 1831). When taken to Constantinople, Dāʾūd was well treated by the Sulṭāns Maḥmūd II and ʿAbd al-Madjīd; in 1260 = 1844, he was appointed governor of the Tomb of the Prophet at Madina where he died in 1267 = 1851 and was buried opposite the tomb of the Caliph ʿOthmān; his praises have been sung by the Arab poet ʿAbd al-Ghaffār al-Akhras.

Bibliography: Amīn b. Ḥasan al-Ḥolwānī, *Maṭāliʿ al-Suʿūd* (Bombay, 1304); Shānī-Zāde, ii. 306, 379; Aḥmad ʿIzzet al-Fārūḳī, *al-Tirāz al-anfas* (Constantinople, 1304), p. 249; Thābit-Efendi, *Baghdād-da Kölemenin Ḥukūmeti*; Aucher-Eloy, *Relations de Voyages en Orient*, i. 325 *et seq.*; Cl. Huart, *Histoire de Bagdad*, p. 168, 175. (Cl. Huart.)

4. Dāʾūd Pasha, first governor (*Mutaṣarrif*) of the Lebanon province (1861—1868). He was an Armenian Catholic, born in Constantinople in 1816, who began his official career as attaché at the Turkish Embassy in Berlin and was afterwards Consul in Vienna. In 1868 he was appointed Minister of Public Works but was unsuccessful in an attempt to negotiate a loan in Europe and, as his health also began to fail, he had to give up his office. In 1873 he died at Biarritz: cf. Sāmī Bey, *Ḳāmūs al-Aʿlām*, iii. 2111.

DĀʾŪD-PŌTRA is the name of the tribe to which the family of the Nawwābs of Bahāwalpur belongs. The name means 'descendants of Dāʾūd' and the tribe claims descent from Dāʾūd Khān a member of the Sindī family known as ʿAbbāsī, from which also springs the Kalhōra family of Sind. There can be little doubt that this family is purely indigenous, probably of Rādjpūt or Djaṭ descent, and that the legend of ʿAbbāsī origin (from a member of the Egyptian ʿAbbāsī Khalīfas, who is supposed to have come to Sind at the time of Sulṭān Muḥammad Taghlaḳ) is of late invention. The family first emerged from obscurity in the XVIIIth century and obtained some importance through timely submission to Nādir Shāh, who gave them some of the possessions of the Kalhōrās including Shikārpūr. Ṣādiḳ Muḥammad the head of the family was killed afterwards in a war with the Kalhōrās, but the family continued to rise in importance. His son Bahāwal Khān founded the town of Bahāwalpur in 1162 H. (1748 A. D.) and took the title of Nawwāb. Under Aḥmad Shāh Durrānī and his successors his dominions were enlarged. Bahāwal Khān II was involved in war with the Durrānīs, and Tīmūr Shāh invaded Bahāwalpur but left it without success, and his successors came rather as refugees than conquerors, as for instance Shāh Shudjāʿ al-Mulk in 1219 H. (1804 A. D.) In 1808 Elphinstone visited Bahāwalpur and the first treaty was made with the British Government. Ṣādiḳ Muḥammad II succeeded in 1224 (1809): he was involved in wars with the Balōč tribes beyond

the Indus and made friends with Randjīt Singh, who after he had conquered Dēra Ghāzī Khān from the Durrānīs gave it on lease for 250,000 rupees a year to Ṣādiḳ Muḥammed. This involved him in further trouble with the turbulent Balōč tribes, and especially the Khōsā tribe who rejected his demand for the hand of a daughter of their chief. His successor Bahāwal Khān III was unable to fulfil his obligations to the Sikhs and Randjīt Singh sent an army under Gen. Ventura and expelled him from Dēra Ghāzī Khān. To avoid destruction by the Sikhs, he allied himself with the British, gave facilities for the passage of troops during the Afghān wars of 1839—1842, and came to the help of Edwardes during the siege of Multān in 1848—49. After the annexation of the Pandjāb the Nawwābs of Bahāwalpur were maintained in possession of their dominions, but were troubled with internal feuds. The present Nawwāb is a minor. He holds the second place among the chiefs of the Pandjāb and receives a salute of 17 guns from the Indian Government.

(M. LONGWORTH DAMES.)

DĀW (often written DHAW, etc.), an Arab vessel on the Red Sea and elsewhere. The word is probably connected with *dawnīdj*, plur. *dawānīdj* (sloop) and appears to be of Persian origin.

Bibliography: Yule and Burnell, *Hobson-Jobson*², s. v. *Dhow*, *Dow*.

DAWĀ' (plur. *adwiya*, q. v., p. 144) "medicine", "medicament", "drug". — The word is first used in the meaning of ingredient (constituent part of a medicine). Thus in Arabic prescriptions, after the individual components are stated — usually introduced by the word *yu'khadh* "let there be taken" — there very frequently appears: *tudjma'u hādhihi 'l-adwiya madḳūḳa mankhūla* "these ingredients are to be pounded, sifted, and combined". Dawā' is also used in the wider sense of "medicine", "drug" (a medicine composed of several elements). Medical treatment is therefore called *al-'ilādj bi 'l-dawā'* in opposition to surgical (*al-'ilādj bi 'l-ḥadīd*) and in medical works the prescriptions themselves are called *ṣifat dawā'* or *nuskhat dawā'* or are given with the simple title *dawā'*. The various prescriptions have also separate names according to their character, eg. *dawā' mushil* "aperient medicine", *dawā' ḥādd* "pungent medicine" (for other names see the article ADWIYA, p. 144).

An attempt has been made to derive the word "drug" common to all European languages from *dawā'*. Cf. C. F. Seybold in the *Zeitschr. für Deutsche Wortforschung*, x. 218 *et seq.*

(E. MITTWOCH.)

DA'WĀ, means accusation or arraignment in civil and criminal law. It should be noted that according to Muḥammadan law, prosecution is still partly a private affair in as much as the aggrieved person himself or his heir (and not the authorities) has the right either to inflict punishment himself on the guilty individual or to demand his punishment. The law however distinguishes between laws made by man (*ḥaḳḳ ādamī*) and divine laws (*ḥaḳḳ Allāh*). There is for example a human claim for justice when anyone has to demand the blood-money (*diya*) in atonement for a murder or the price of a thing sold by him or the return of something stolen from him by a thief. If on the other hand no human being has been affected in his rights, but it is solely a divine law that has been transgressed, the punishment of the guilty one is regarded as the right of God. In the latter case every believer has the right to bring the sinner to judgment *Dei causa*, so that the judge may pass sentence on him (*ta'zīr*). Such an accusation is called *da'wa 'l-ḥisba*, and the office of *muḥtasib*, who supervises commercial transactions in the markets and bazaars and when occasion arises has to act as public prosecutor, has arisen out of this right to arraign those who trespass divine commands. A *da'wa 'l-ḥisba* is not allowed only when it is a question of a crime which requires a *ḥadd* punishment. In this case the judge, if suspicion falls on anyone for any reason, must himself go into the matter and order punishment to be executed on the guilty individual in accordance with the strict letter of the law, if his guilt is conclusively and legally demonstrated. According to common law however it is regarded as meritorious (even for the judge also) to avert punishment from the guilty one as far as possible, if it is purely a divine law that has been transgressed. (Cf. the article 'ADHĀB, p. 132).

As regards impeachment on a question of a law of man, the following is in the procedure to be observed. After the accuser (*al-mudda'ī*) has duly preferred his charge and explained it, the judge hears the reply of the accused (*al-mudda'ā 'alaihi*). If the latter concedes the justice of the accusation it requires no further proof. If, on the other hand, the accused disputes the justice of the charge, the judge must as a rule not pass sentence until the prosecutor has brought forward evidence in support of his statements. The judge is however allowed in certain circumstances, if he is personally acquainted with the facts of the case, to give a verdict from his own knowledge without further evidence being brought by either party, and he is never required to give a verdict, based on evidence formally valid adduced by the parties, but contrary to his own better knowledge. Valid evidence in a law-suit is mainly the testimony of free adult believers, who are known as *'adl*; written documents are not legally valid evidence unless their contents are confirmed by reliable witnesses. If the prosecutor cannot bring any proof he is nonsuited if the accused swears that the charge is unfounded. If the accused declines to take this oath, the accuser is held to be in the right if he will testify on oath to the justice of the charge. The judge also can make one of the parties take an oath in order to make the testimony of a witness quite conclusive. Finally it is to be noted that the judge must dismiss a charge by a statute of limitation if it be proved that the prosecutor has, without valid grounds, been an unusually long time in making good his charges, for this can only be interpreted as meaning that the accusation is unfounded. The period of limitation is however not definitely fixed. According to some faḳīhs it is 15 years, while others say it is 30 or somewhat more.

DAWĀʾIR. [See DWĀʾIR.]

DAWĀR, "an encampment of Beduin Arabs, where the tents are arranged in a circle or ellipse, the empty space in the middle being reserved for the flocks"; this very ancient form of encampment is found among the Beduins of the East (North Syria, Mesopotamia) and among all the nomads or semi-nomads of North Africa; and the name *dawār* which is given to it appears in certain mediaeval travellers and geographers. In the east, the exact form of the word is *duwār* or *dwār*, and in the Maghrib it is *dwār* or *duwwār* (plur. *dwāwīr*). The number of tents which make up a *duwār* is very variable; it may be as many as several hundreds, while on the other hand it need not be more than a dozen. Many reasons, e. g. the abundance of pasturage, the varying state of security or insecurity etc., lead alternately to the breaking up of the same body of Beduins into *dawārs* of little importance or its reunion into *duwārs* of considerable size. On the whole, the permanent state of peace and security introduced by the French conquest into Algeria and Tunisia tends to bring about the ultimate disappearance of the great groups of tents. — In the administrative language of Algeria, the word *douar* has lost its primitive significance and is used to mean a native settlement, nomad or sedentary, under the authority of the same chief, ḳāʾid or shaikh.

DĀWAR. [See ZAMĪN-I DĀWAR.]

DAWĀSIR or DOWĀSIR is the name of a tract of country lying to the southwest of Nadjd in Arabia. It is contained within latitude 21° and 24° N. and longitude 44° to 46° E., and forms one of the districts into which the kingdom of al-Riʾāḍ is divided. The extreme limit of that kingdom in a southwesterly direction is the Wādī Salaiyil which separates the Wādī Dawāsir from the ʿAsīr province of the Yemen. The Wādī Dawāsir itself seems to be the continuation in a northeasterly direction of the W. Taraba and W. Bīsha [q. v. p. 727] and is itself continued by the W. Aflādj. The province, which is named after an Arab tribe, lies immediately to the north of the great southern desert or Dahnā [q. v.], and is itself described as barren and unproductive. Throughout its shallow length of over 200 Arabian miles or ten days' journey are scattered villages of palmleaf huts. The inhabitants are as inhospitable as the soil. They live, wherever possible, by plunder, and are said to be the most fanatical and dangerous of all the Wahhābīs. Palgrave states that they had been already satirised by Mutanabbī, and are still "the most contemned and the most contemptible among all the Arab race". Doughty states that one informant told him that one might ride a camel for three days through the Wādī Dawāsir without leaving the palm-groves for any length of time; but the common report is what has been given above. It was also said to be filled with good villages of some of which Doughty gives the names. The distance from al-Aflādj to Wādī Bīsha was said to be twelve days' journey for a *dhalūl*. It was also said that the wild ox was found there.

(T. H. WEIR.)

DAWĀTDĀR (DAWĀDĀR, DAWIDĀR, DUWAIDĀR, composed of *dawāt* or *dawā* and *dār* = inkpot-bearer, called *diodar* in the journals of European pilgrims) was the title of an official in the Mamlūk kingdom, who with the Djāndār [q. v.] and the private secretary received the mails destined for the Sulṭān from the couriers, had all the Sulṭān's letters signed by him and dispatched. He supervised the remuneration of the Mamlūks and had therefore the deciding vote in the assessment and allotment of the fiefs. The office of *Amīr Dawādār al-Kabīr* (Grand Dawādār) was at first held by a Mamlūk, who being a foreigner was often not sufficiently well acquainted with the Arabic language. Sulṭān Ḳalāʾūn therefore found it necessary again to organise the Privy Chancery on the lines on which it had existed in the Fāṭimid period. The importance of the Grand Dawādār gradually increased. Even in the time of Sulṭān Ḥasan he was chosen from among the commanders of a 1000 Mamlūks (general). In the later period of Mamlūk rule in the xvth and beginning of the xvith centuries, his influence often turned the scale, particularly as the Grand Dawādār frequently held at the same time the office of *Ustādār* (Master of the Household) and of chief supervisor of rents (*Kāshif al-Kushshāf*). Besides the Grand Dawādār there was also a second Dawādār with the rank of an Amīr of 40 Mamlūks, a third with the rank of an Amīr of 20 Mamlūks, and 16 Dawādārs among the body guard (*khāṣṣiki*) in Cairo and in each province. A Dawādār Sikkīn also is frequently mentioned; according to Ibn Iyās's account, his office was to conduct the correspondence between the Sulṭān and his Mamlūks. Besides all the higher officials had Dawādārs of their own, corresponding to the modern private secretaries.

(M. SOBERNHEIM.)

DAWLATĀBĀD, situated in the north-western corner of the Nizām's dominions, is the ancient DEVAGIRI or DEOGIR, which has been identified with Ptolemy's Τάγαρα. It was the capital of the northern Yādavas from 1187 until their final overthrow by the Muslims in 1318. In 1294

Devagiri was attacked by ʿAlā' al-Dīn, nephew and son-in-law of Fīrūz Shāh Khaldjī of Dihlī, but Rāmačandra, the Yādava rādja, was permitted to redeem the city by paying an indemnity and promising to pay tribute. In 1318 the town was attacked and captured by Ḳuṭb al-Dīn Mubārak Shāh Khaldjī who, having taken and flayed alive Harpāl Deva, built the great mosque of which the ruins are still standing. Muḥammad b. Taghlaḳ (1325—1351) after his extensive conquests in the Dakhan rebuilt Devagiri, fortified it elaborately, named it Dawlatābād, and made it the capital of his empire, driving the entire population of Dihlī across India to the new city. The measure was a failure, and Muḥammad was obliged, before the end of his reign, to permit the exiles to return. When the centurions of the Dakhan rebelled in 1347, Ismāʿīl the Afghān, whom they had elected as their king, was besieged for some time in Dawlatābād by the emperor, who was compelled to raise the siege by the news of a rebellion in Gudjarāt. On his departure Ismāʿīl resigned his crown to ʿAlā' al-Dīn Ḥasan, who assumed the title of Bahman Shāh. He transferred the capital to Gulbarga, and Dawlatābād remained the capital of the *taraf*, or province, of that name. After 1490 the fortress was included in the dominions of the Niẓām Shāhī Kings of Aḥmadnagar. In 1630, when Shāh-Djahān resolved to extinguish this dynasty, Fatḥ Khān, son of Malik ʿAmbar the African, murdered Murtaḍā Niẓām Shāh II, and, after proclaiming his son, Ḥusain Niẓām Shāh III, king, shut himself up in Dawlatābād. He made a pretence of submitting to the Mughals, and the Niẓām Shāhī dominions were invaded by an army from Bīdjāpūr. Fatḥ Khān sought help from the emperor, but on the arrival of the imperial troops allied himself with the Bīdjāpūrīs. In June, 1633, after a siege of four months, he was compelled to surrender, and Dawlatābād passed into the possession of Shāh-Djahān.

The hill on which the citadel stands has been scarped on all sides to a great height, and is surrounded at the foot of the escarpment by a deep and wide ditch. Access is gained to the citadel by a spiral passage, cut through the hill itself, and the entrance is closed by an iron gate. The top of this passage is covered by a grating on which, when it was closed, a fire could be lighted in order to suffocate any who might succeed in forcing the iron gate. The fortress was impregnable before the improvement of artillery, and its capture by the officers of Shāh-Djahān was due to the failure of provisions. The extensive ruins of the old city are now unoccupied, save for the huts of a few villagers.

AL-**DAWLATĀBĀDĪ**, SHIHĀB AL-DĪN AḤMAD B. SHAMS AL-DĪN B. ʿOMAR AL-ZĀWULĪ AL-HINDĪ, was born in Dawlatābād, a town in the Dakhan. His early days were passed in his native land, but the fame of some eminent ʿUlamā of Dihlī induced him to leave his home, and to visit that town. Here he remained under the instruction of Mawlānā ʿAbd al-Muḳtadir and Mawlānā Khwādjagī. When Tamerlane swept down upon India, Mawlānā Khwādjagī thought it advisable to seek a place of safety. His pupil, Shihāb al-Dīn Aḥmad, and the Mawlānā went to Kālpī and stayed there for a long time. But afterwards Shihāb al-Dīn went to Djawnpūr where he was received with honour by Sulṭān Ibrāhīm Sharḳī who appointed him Ḳāḍī al-Ḳuḍāt (chief justice) of Djawnpūr and conferred upon him the title of Malik al-ʿUlamā (king of the learned). He lived here to his last days and died in A. H. 849, A. D. 1397, and was buried on the right side of the mosque of Sulṭān Ibrāhīm Sharḳī. He is the author of a Persian commentary on the Ḳor'ān, *Baḥr Mawwādj* (lithographed, Lucknow 1880), and several other works.

DAWLAT-SHĀH, (AMĪR) B. ʿALĀ' AL-DAWLA BAKHTĪSHĀH, a Persian man of letters, a descendant of a family of Isfarā'in in Khorāsān which held certain estates there; his father was one of the most favoured courtiers of Shāh Rukh, son of Tīmūr; he himself took part in the battle between Sulṭān Maḥmūd and Abu 'l-Ghāzī Sulṭān Ḥusain, near Andakhūd. He was about fifty years of age when he began to write his *Tadhkirat al-Shuʿarā*, which was completed in 892 (1487).

The eldest son of Fatḥ-ʿAlī Shāh was also called Dawlat-Shāh; he was born at Nawā on the 7th Rabīʿ II. 1203 (6th Jan. 1789), was for long governor of Kirmān-shāhān and died on the 26th Ṣafar 1236 (3rd Dec. 1820) on returning from his campaign against Maḥmūd Pasha; he left some poems.

Bibliography: *The Tadhkiratu 'sh-shuʿarā*, ed. by Edw. G. Browne, p. 7, 14; Riḍā-Ḳulī-Khān, *Madjmaʿ al-Fuṣaḥā*, i. 26; Edw. G. Browne, *The Sources of Dawlat-shāh* in *Journ. of the R. As. Soc.*, Jan. 1899, p. 37—60; Belin, in the *Journ. Asiat.* 1861, i. p. 245. (CL. HUART.)

DAWR (A.) "Circle", technical term in astronomy (period of revolution); in logic: argument in a circle, e. g.: The sun is the star of day and the day is the time when the sun is in the sky; in metrics: strophe in certain metres; in music: melody; for the meaning in divination, cf. Dozy, *Supplément*, i. 473.

DAWRAḲ, a town in Khūzistān, also called Dawraḳ al-Furs, = "D. of the Persians", in the middle ages capital of a district which was sometimes called after it and sometimes after Surraḳ. Dawraḳ lay on the bank of the river of the same name, which flows parallel to the Kārūn, in approximately 48° 37' E. Long. and 30° 55' N. Lat. The veils made here used to be famous; a sulphur spring was used for medicinal purposes (baths). A few remarkable buildings dated from the Sāsānian period. In recent times Dawraḳ was abandoned by its inhabitants, who built a new town an hour or two's journey from it, the modern Fallāhiya, to which the old name Dawraḳ (popularly Doraḳ) is also sometimes given. This modern town is now the most important place in the coastlands of Khūzistān (or ʿArabistān). It is built in 30° 30' N. Lat. within the fork of the arms of the river Djarrāhī in a low lying swampy district, above 16 miles from the Persian Gulf. The majority of the innumerable canals end at Fallāhiya after much of their water has been used up to irrigate the fields, and then lose themselves to the south in the swamps. The Djarrāhī

is connected by canals with the Kārūn. Fallāḥiya is about three miles in circumference; the inner town is enclosed by a wall of earth protected by towers around which extensive suburbs lie in the shades of large groves of palms. With the seven villages attached to it, the total population numbers c. 8000; their main industry is the manufacture of cloaks (*ʿabāʾas*) which are exported hence to Arabia and Persia in large quantities. — Since the middle ages the swampy lowlying stretch of coast of Khūzistān, 3 parasangs in length and breadth, through which flow the river of Dawraḳ and the Kārūn, has been called Dawraḳistān (Dōraḳistān, popularly Dōrgestān) after Dawraḳ. The bay in this district of lagoons in the Persian Gulf is called Khawr Dawraḳ (Khōr Dōraḳ).

(1890), p. 73. (M. Streck.)

DAWSA. The *Dōsa*, literally "trampling", was a ceremony performed at Cairo by the Shaikh of the Saʿdite fraternity of derwishes on the Mōlids, or birthday celebrations, of the Prophet, of al-Shāfiʿī, of Sulṭān Ḥanafī (a celebrated Cairene saint who died in A.H. 847: *Khiṭ. djad.* iii. 93; iv. 100), of Shaikh Dashṭūṭī (or Ṭashṭūshī, another saint; see Lane, *Modern Egyptians*, chap. xxv. and *Khiṭ. djad.* iii. 72; 133; iv. 111) and of Shaikh Yūnus (see below). These took place by day: a similar ceremony was performed by the Shaikh al-Bekrī on the Mōlid of Dashṭūṭī, but by night. This ceremony has been described at length by Lane (*loc. cit.*), but it, in short, consisted in about three hundred derwishes of that order laying themselves down with their faces to the ground and the Shaikh riding over them on horseback. By a special *karāma* [q. v.], inherent in the order, none was ever injured, and by such physical contact the blessing (*baraka*) belonging to the Shaikh was communicated to his followers. The same ceremony is performed elsewhere. Lady Burton found it at Barze near Damascus (*Inner Life of Syria*, chap. x). Dozy, *Supplément*, (s. v.) refers also to *Voyage au Ouaday*, trad. par Perron, 700. In other Orders, also, benediction has been ascribed to rubbing with the feet of the Shaikh and even to the dust on which he has trodden. The use of a horse by the Saʿdites has been associated with the rank of their founder as a descendant from the Prophet. The origin of the Cairo Dōsa is obscure, but the legend told of it is, that when Shaikh Yūnus, the son of Saʿd al-Dīn al-Djibāwī, the founder of the Saʿdite *ṭarīḳa*, came to Cairo, the Saʿdite derwishes there asked him to establish for their usage a *bidʿa ḥasana* (good innovation) which would be a *karāma* in proof of his wali-ship and of the sacred origin of their order. He directed them to lay round glass vessels in rows on the ground, and he then rode over those on horseback without breaking them. This his successor could not do, and prostrate derwishes were substituted for the more fragile glass (Goldziher in *Zeitschr. d. Deutsch. Morgenl. Ges.* xxxvi. pp. 647 *et seq.*; *Taʾrīkh* of Muḥammad ʿAbdū (Cairo, 1324), vol. ii. pp. 147 *et seq.*) This Shaikh Yūnus is said by some (e. g. Goldziher's authority) to be buried in the Bāb al-Naṣr, and by others, outside of that gate on the way to ʿAbbāsiya (*Khiṭ. djad.* ii. p. 72). The dates are quite uncertain apparently because of the quarrel as to origin between the Saʿdite and the Rifāʿite derwishes. Perhaps, also, there has been confusion with the *madjdhūb* Shaikh Yūnus al-Shaibānī (Maḳrīzī, *Khiṭaṭ*, ed. i., vol. ii. p. 435 = ed. ii., vol. iv. pp. 304 *et seq.*), the founder of the Yūnusite order. Saʿd al-dīn is commonly assigned to the second half of the viith century of the Hidjra. The Dōsa was finally abolished by the Khedive Muḥammad Tewfīḳ in 1881, on the basis of a *fatwā* from the chief Muftī of Egypt. It was judged, to be a *bidʿa ḳabīḥa* (evil innovation) as involving contemptuous treatment of Muslims. The Saʿdites petitioned that they might be permitted to hold it at least on the Mōlid of Shaikh Yūnus himself, but even that was forbidden. At present all that is left is that on the morning of those Mōlids their Shaikh finds before his door a number of derwishes lying on the ground and walks over them (A. Le Chatelier, *Confréries musulmanes*, p. 225).

Bibliography: Add to references above, *Khiṭ. djad.*, iv. p. 112; Depont et Coppolani, *Confréries religieuses musulmanes*, pp. 329 *et seq.* (D. B. Macdonald.)

AL-DAWWĀNĪ, Muḥammad b. Asʿad Djalāl al-Dīn, an Arabic and Persian author, born in 830 (1427) at Dawwān in the district of Kāzarūn, where his father was Ḳāḍī; he claimed descent from the Caliph Abū Bakr whence his *Nisba* al-Ṣiddīḳī. He ultimately became Ḳāḍī of Fārs and professor at the *Madrasa al-Aitām* in Shīrāz and died in 907 (1501) (according to others in 908) near Kāzarūn. In addition to numerous commentaries on well known works of philosophical and mystical literature he wrote a series of smaller dogmatic, mystic and philosophic treatises in Arabic. Of these have been printed his commentary on *al-ʿAḳāʾid al-ʿAḍudiya*, the creed of al-Īdjī (died 756 = 1355), Stambul 1817, St. Petersburg 1313; his commentary on the *Tahdhīb al-Manṭiḳ wa ʾl-Kalām* of al-Taftāzānī (died 791 = 1389), Lucknow 1264, 1293 (with glosses by Mīr Zāhid), and his *Risālat al-Zawrāʾ*, a treatise on several philosophical and mystic points, completed in 870 (1465) (Cairo 1326 with *Taʿlīḳāt*), the idea of which had come to him not far from the Tigris, which is also called al-Zawrāʾ, after a vision of ʿAlī. Of his Persian works the best known is his edition of Naṣīr al-Dīn al-Ṭūsī's (died 672 = 1273) *Akhlāḳ-i Nāṣirī*, which was itself a translation of the *K. al-Ṭahāra* of Ibn Mushkawaih (died 421 = 1030), entitled *Lawāmiʿ al-Ishrāḳ fī Makārim al-Akhlāḳ* or more briefly *Akhlāḳ-i Djalālī*, printed Calcutta 1810, Nawalkishor 1283, transl. into English by W. T. Thompson, *Practical Philosophy of the Muhammedan People*, London 1839.

DAY (T.) Maternal uncle; cf. the article dey.

DAY (Dai), name of the tenth month in the

Persian calendar, and also the name of the 8th, 15th and 23rd day of each month, to which the name of the next day is added to distinguish them from one another, thus: *Dai ba Ādhar*, *Dai ba Mihr*, *Dai ba Dīn*.

DEBDŪ, a town in the east of Morocco at the western end of the chalk range which runs from Tlemcen to Debdū; it is 3528 feet above sea-level (according to De Foucauld), about 85 miles, as the crow flies, from the sea and has a temperate climate. Debdū lies in the upper valley of the Wād Debdū, a tributary to the middle Mulūya on its right bank. "Debdū" says de Foucauld "is built on a delightful site at the foot of the right wall of the valley, which rises sheer upright to a height of 250 feet above the river; it forms a high wall of yellow rock, over which run long creepers with their dark foliage. At the top lies a plateau with an old fortress in a commanding position on the edge of the precipice with a high minaret and crumbling towers, on the other side of the plateau is a series of steep walls of rock and steep slopes rising to the summit of the heights. There, 1500 feet above Debdū is a long wooded ridge called the *Gada*. Brooks rushing from the mountain top fall in high cascades down these steep walls and clothe the surface with bands of silver. Debdū is surrounded by splendid gardens; vines, olive, fig, pomegranate and peach trees form thick groves around the town, and extend beyond along the edge of the Wād. The rest of the valley is covered with pasture, fields of wheat and barley rising up its lower slopes".

It is not possible to fix the date of origin of Debdū. Historians mention it for the first time in connection with the partition effected by ʿAbd al-Ḥakk in the viith = xiiith century among the Marīnid tribes. The district of Debdū fell to the Banī Urtādjin and the town became the capital of their fief. These Berbers organised into a kind of makhzen tribe, were entrusted with the task of protecting the kingdom of Fās against the attacks of the rulers of Tlemcen. Thence resulted numerous struggles of which the best known is the war of Abū Ḥammū II., king of Tlemcen, against Ibn Zagdān, lord of Debdū, and his ally Wanammār b. ʿArīf, lord of Garsīf and chief of the Maʿḳil Arabs of the Angād country to the north of Debdū (Suīd, Aḥlāf, Sadjīʿa etc.). In this war, in the xivth century of our era, the lands of Debdū and of Garsīf were utterly devastated by the king of Tlemcen.

The fall of the Marīnids and the rise of the Banī Waṭṭās brought about a revival among the Arabs of the Angād country, who entered the service of the Tlemcen dynasty. Wars followed between the Urtādjin Marīnids of Debdū and the Arabs. The latter besieged the town; the Marīnid chief Ibn Raḥū negotiated with them, then installed himself at Debdū where about 1430 he founded a practically independent principality. This little state lasted for over a century. Muḥammad the third successor of Ibn Raḥū, had a fortress built, erected the mosque and its tall minaret, welcomed many foreigners to his town, particularly Andalusian Jews who had been driven out at the Spanish conquest. To this day the Jews of Debdū divide themselves into native and Andalusian. It was in the reign of the Amīr Muḥammad that the Banī Waṭṭās sovereigns of Fās were forced to recognise the practical independence of the descendants of Raḥū. They were too much occupied with their struggles against the Spanish and Portuguese in the west and north of Morocco, to undertake the difficult task of forcing the Amīr of Debdū to submit.

Nevertheless the descendants of Ibn Raḥū took up arms on behalf of their Marīnid suzerains against the Saʿdian Sharīfs who were trying to overthrow the kings of Fās. After the capture of Fās from the Sharīf Muḥammad al-Mahdī in 1554 we find the Amīr of Debdū as an ally of the Marīnid Bu Ḥassūn and of the Turkish Beglerbeg Ṣālaḥ Raʾīs. The second Saʿdian Sulṭān, al-Ghālib bi ʾllāh, forced the last Amīr of Debdū, ʿAmmār, to come and live in Fās. On the death of the latter, the Sulṭān extinguished the principality and placed the territory of Debdū under a Pasha in 1563.

From this time onward the history of Debdū is full of obscurity. There were not only internecine wars for predominance between Arab and Berber tribes, wars in which the people of the town played a part and in which their town was often at stake. The town gradually became so depopulated that the Jewish merchants in it were ultimately more numerous than the Muslims. Debdū became merely the commercial centre of Eastern Morocco and did not have an important garrison. The disputes about boundaries between the Turks in Algiers and the Sharīfs of Fās had their scene farther east: the upper valley of the Wād Zāʾ, Udjda and the basin of the Tāfnā.

From the time of Mūlāy Hasan (1873—1894) there has not been a Pasha at Debdū, which is over 100 miles from the frontier of French Morocco. Debdū became ruled like the majority of independent Berber districts by *mīʿād* and *shiūkh*. The Muḥammadan population recognised the authority of the ʿĀmil of Tāza, who annually sent his Khalīfa to collect taxes; the Jews recognised the Pasha of Fās al-Djadīd, to whom they regularly sent their tribute. This state of practically complete independence facilitated the anarchy engendered by conflicts between Berber and Arab *Laff* (political confederations).

In a period which cannot be exactly defined, about the middle of the xixth century, the Ulād al-Ḥādjdj Arabs, already masters of the right bank of the Upper Mulūya and the Rakkam (in the south of the Gada or mountainous plateau of Debdū) ultimately secured the town of Debdū also, in which two of their sections, the Ulād Yūsuf and the Ulād ʿAbdū definitely installed themselves. Since then Arab influence and the Arab language have been predominant in Debdū to such an extent that the Berber language is only spoken in the Ḳṣūr of the surrounding mountains.

The accession of the Mūlāy ʿAbd al-ʿAzīz (1894), and the rebellion of the claimant Bū ʿAmāra, were the signal for a recrudescence of anarchy in this region. Bū Ḥasīra, a Berber of the Banī Snassen, who had distinguished himself in the pretender's wars, brought the region under his rule and and tried to make himself independent. But in 1904 at the instigation of a Berber Jew Dūdū b. Ḥaida, the town and all the surrounding tribes proclaimed the pretender. The latter appointed Ḳāʾids from among his officers to all the tribes: but these foreign Ḳāʾids were incapable of putting an end to disputes between

the various tribes and to put down the resultant anarchy. They were content to collect tribute from their subjects and to oppress them. Dūdū b. Ḥaida, Ḳā'id of Debdū, called by his enemies the "tyrant", alone held out. He took advantage of his position to revenge himself on his enemies, the Andalusian Jews. The latter attacked him before the Rabbinical tribune of Fās and even before that of Jerusalem. Ibn Ḥaida was condemned but his exploits only ceased with the French occupation of the town, which took place in 1911 after the proclamation of Mūlāy Ḥāfiẓ by the Andalusian Jews and the Muḥammadan Arabs. It was necessitated by the increase in local disturbances, the Berber attempts to plunder the town but particularly by the assassination of several Frenchmen. Debdū is one of the four markets to be jointly organised by France and Morocco in the Algerian-Moroccan hinterland (Art. 3 of the Franco-Moroccan treaty of the 20th April 1902). The occupation had hitherto been postponed.

The geographical position of Debdū makes it the capital and sole centre of supplies for the Berber and Arab tribes of the valley of the middle and upper Mulūya. Around the town the mountains and their Ḳṣūr are occupied by the Berber tribes of the Banī ʿAmar, Banī Yaʿla, Banī Fashat, Banī Ushkal, Banī Riis, Ahl Rashīda, Ahl Admar and Banī Khalaftan; the low lying lands in the valley belong to the Arabs and are occupied in the south by the Ulād al-Ḥādjdj, in the north and west by the Ulād Unnan, the Hawāra, the Ahlāf and the Karārma, etc. These peoples who are a mixture of Arab and Berber elements are being driven to the east by the Banī Warāin, who are contributing to break them up.

Debdū consists of two parts, Debdū proper with its fortress Ḳaṣba Debdū, and a suburb Mṣallā on the left bank of the valley. Debdū has 2032 inhabitants of whom 729 are Muḥammadan and 1303 Jews. The Ḳaṣba has 264 Muḥammadan inhabitants and Mṣallā 234; in all 2530. The town is divided into four quarters: 1. the Ulād ʿAmāra of Berber origin. 2. the Ulād Yūsuf, Arabs. 3. the Ulād ʿAbīd, Arabs. 4. in the centre the Mallāḥ or Jewish quarter. The inhabitants of the Ḳaṣba claim descent from the Marīnids. The Jews are divided into Kwahan (sons of Kāhin) who are Berbers, and Andalusian (Ulād Marciano, Ulād b. Guigui, Ulād b. Susan, Ulād Nasim and Ulād Maghalli).

The Ulād ʿAmām claim to be marabuts; for it is in their quarter that the only mosque in the town is found. The Jews have 12 synagogues of which two are particularly notable for their internal decorations. The natives say that the Ḳaṣba was constructed by Christians; in any case its mosque is remarkable for its size and tall minaret.

The houses of Debdū are square in form like those of Tlemcen, built of *ṭābiya* (a kind of pisé) and are surmounted by terraces in spite of the high situation of the town. Each has its *frina*, a kind of oven for baking bread but not one has a well or granary. The latter are replaced by *ḳuffa* baskets, in which the natives store their grain.

Before the troubles of the last few years the municipal government of Debdū was carried on by three *shaikhs* elected annually by the citizens. They were also charged with the duty of administering justice among Muḥammadans. Among the Jews, on the other hand, justice was administered by a Rabbinical tribunal which still exists. It consist of a Chief Rabbi and two Rabbi assessors. These three are appointed by the members of the local consistory called shiūkh (plur. of shaikh). The shiūkh are nominated by the Sulṭān of Fās. It is clear therefore that the Jews are an influential element, for the Makhzen, in the midst of almost independent peoples. In the case of an appeal the case is carried before the Rabbinical tribune in Fās which is the final court of appeal.

The marriage customs of Debdū are those of the Berbers of the district except as regards the Andalusian Jews who follow the customs observed in Tetwān and Fās. The Andalusian Jewess can dispose of her dowry and realise it under the supervision of her husband. The Berber Jewess possesses nothing; her husband has bought her from another Jewish family, and she is the property of her lord and master. The Jews of Debdū are polygamous.

The Andalusian Jews dress in the western (Tetwān, Fās etc.) fashion while the Berber Jews follow the custom of the Arabs or Berbers of their district. The Jewish women dress like Muhammadan women but do not wear the *ʿabāya* of the Beduins. The Jewesses tie a kerchief round their heads and do not wear the *ʿabāya*.

The women make carpets, which are sold in Tlemcen, weave cloths called *sbegha*, which after being embroidered by the men find a market in the country round. At Debdū black soap is also made as well as sieves and other Arab household requisites.

The much frequented weekly market of Debdū is held on Thursdays. But the Berber Jews are not content with displaying their goods there; they go to trade also among the tribes and towns of Algeria of the Udjda region and the Upper Mulūya. Owing to a kind of feudal system of protection — *Kull yhūdi bi sīyidhu*, "every Jew has his master", says a local proverb — they trade in comparative security up to borders of the lands still unsubdued. For this the merchant makes an agreement with a Berber chief, pays him an annual sum, leaves with him in his ḳṣar one of his wives and her children, and by an oath on the Bible declares himself the chief's man. Henceforth the Jew can freely go about wherever the influence of the chief extends. This custom, which was noted even in the middle ages by al-Bakrī, is general in the Moroccan Atlas.

Agriculture, favoured by the climate, is prosperous in the neighbourhood of Debdū. Muhammadans and Jews alike are landlords and cultivators. Some Jews work as khammās, i. e. as hired labourers for a fifth of the gross harvest. The unit measure of labour is the *zwīdja*, the amount which a pair of oxen can till in a year, as in Algeria. There are fine nut-trees around the Ḳaṣba of Debdū. The woods around are unfortunately rendered unsafe by many wild boars and a few panthers.

To the south of Debdū is a fountain the building of which according to the natives dates from Roman times. They also say that their town is over 500 years older than Fās. This fountain and many others supply the beautiful gardens with water. The waters irrigating them are divided according to the number of square feet in each. The length of the time they are to be watered is fixed as follows: by day the hours are decided

by the length of the shadow cast by a staff placed perpendicularly in the sunlight, by night the hours are fixed by the movement of the stars.

The agricultural products in Debdū are carried throughout the *'amālat* of Ud̲j̲da along with those of the Banī Snassan.

(A. Cour.)

DEDE (T.), "grandfather", a surname frequently given to S̲h̲aik̲h̲s of Dervis̲h̲ communities. We may cite the names of K̲h̲āk-Dede Na'lbandī, born at Pergamon; Muḥammad Dede, buried near the seven towers at Constantinople; Ḥasan-Dede, who had built himself a hut as high as the minaret of the mosque of Sulṭān Muḥammad II and died when his frail structure was destroyed in a night by a tempest; Ḳapānī Deli Seier Dede, who lodged in a bakehouse and threw himself into the sea and was never seen again; Sarbān Ḥalīḳ, Agha of Szimtorn in Hungary, who became dumb at the end of the war under Muḥammad III and only recovered his speech seven years later by pronouncing the words *yetmis̲h̲ g̲h̲urūs̲h̲* "70 piastres" constantly, which became his surname; he used to walk about the streets all winter without getting any trace of mud on his slippers; 'Ashūn-Dede, who lived at Sarrād̲j̲-K̲h̲āna, never left it and used to clear the streets of the stones which he found in them; Durmis̲h̲-Dede, at Rumili-Ḥiṣār, whom the captains of ships used to consult as they passed. In Asia Minor pilgrims visit the tomb of Burhān-Dede, near that of Ḳoyūn-Bābā, and that of Pīr-Dede, a contemporary of Murād II, at Marsifūn.

Bibliography: Ewliyā Efendi, *Travels*, transl. Hammer, i. 2, 21, 25; ii. 97, 213. (Cl. Huart.)

DEDE AG̲H̲AČ, a seaport on the Aegean Sea in the wilāyet of Edirne and capital of the Sand̲j̲aḳ of the same name. In recent years since it has been connected by rail with Constantinople and Salonika, the town formerly of no importance, has increased considerably and now has 9000 inhabitants. The harbour is a fairly busy one and is increasing in prosperity. Cf. 'Alī D̲j̲awād, *D̲j̲og̲h̲rāfiya Lug̲h̲āti*, p. 386 *et seq.*

DEDE SULṬĀN. A certain Börekled̲j̲e Muṣṭafā is known by this name, who played a part in a religious movement under Sulṭān Meḥemmed I. For further information see the article BADR AL-DĪN SIMĀWNA.

DEFTER (T.), from the Greek διφθέρα, parchment, register, book; cf. Yule and Burnell, *Hobson-Jobson*², s. v. Dufter.

DEFTERDĀR (P., T.), strictly "keeper of the registers", was formerly the name applied in the Ottoman Empire to the superintendent of the finances and still applied to the director of the finances of each province (*wilāyet*). From the time of Muḥammad II, there was only one defterdār, that of Rūmili, who had an assistant for the Asiatic provinces; at a later period there were four of them. Selīm I had instituted the third to control the finances of Egypt and Syria; the fourth was created by Sulaimān I for Hungary and the provinces of the Danube. Under Selīm III, the first was the minister of finance, the second administered the new taxes established under the name of *niẓām-i d̲j̲edīd*; the third had charge of the victualling of the capital (*ḥubūbāt-nāẓiri*). These officials were admitted on Tuesdays with the viziers to audience of the Sulṭān; but they could only present reports which had been revised by the Grand Vizier and approved of by him. The first promontory on the Bosporus on the European side is called *Defterdār-Būrnū*, "Cape of the Controller of Finance".

Bibliography: Hammer, *Histoire de l'empire Ottoman*, iii. 312; do., *Geschichte der Gold. Horde*, p. 497 *et seq.*; d'Ohsson, *Tableau*, vii. 192, 261. (Cl. Huart.)

DEHĀS, explained by Ibn Ḥawḳal as deriving *dih ās* "Ten Mills", the name of the river of Balk̲h̲ called Baktros by the ancients (cf. Pauly-Wissowa's *Real-Enzyklopaedie*, ii. 2814) and now known as Balk̲h̲-āb, to which this town owes its favourable topographical situation (it must however be noted that the Arabs frequently mean the Āmū-Daryā by the *Nahr Balk̲h̲*). The Dehās, which is rich in fish, rises in the Kūh-i Bābā from the Band-i Amīr, flows through several natural pools and on emerging in the plains south of Balk̲h̲ is divided up into numerous channels, which irrigate the wide country around the town, in which their waters disappear without reaching the Āmū-Daryā (see Yate, *Northern Afghanistan*, p. 283). The supervision of the individual channels was in ancient times as even in the xix[th] century an important and remunerative task (see *Asiatic Journal*, xxii. 169). The swamping of the district and its resultant unhealthiness is apparently due to the increasing neglect of the canal system. — For further literature see the article BALK̲H̲. (R. Hartmann.)

DEIR AL-ZŌR, the capital of the sand̲j̲aḳ of Zōr directly under the Sublime Porte; it is a charming, quite modern town on the right bank of the Euphrates with a government palace in the modern Greek style, three mosques, and two Catholic churches. It has also bazaars of vaulted masonry rebuilt in 1886 and about 2500 stone houses with streets 5 yards broad. It is surrounded by the gardens of the island of Hawīd̲j̲a "grove" connected with the town by a bridge; to cross to the left bank of the river, a large boat called the *ṭurrāma* is used. It has about 20,000 inhabitants, the great majority of whom are Sunnīs. It is here that the date-palm begins to be cultivated [see the article ZŌR].

Bibliography: V. Cuinet, *Turquie d'Asie*, ii. 275 *et seq.*; *Revue du Monde Musulman*, xiv. 1911, p. 208; M. von Oppenheim, *Vom Mittelmeer zum Persischen Golf*, i. 329 *et seq.* (Cl. Huart.)

DELHI. [See DIHLĪ.]

DELHEME (D̲h̲u 'l-Himma). [See SĪRAT.]

DELI (T.), "mad" or "wild", the name of a body of irregular troops formerly in the Turkish army, mainly Bosnians or Albanians by birth and commanded by a Deli Bas̲h̲ī. They often served as the Vizier's bodyguard. — The word *deli* also appears in Turkish personal names, e. g.

Deli Berāder, as Ghazali of Brusa [q. v.] was called; Deli Bekir Tursus, a character in the Turkish shadow-play.

Bibliography: Rycaut, *Histoire de l'État présent de l'Empire Ottoman*, p. 468 *et seq.*; Jacob, *Türkische Litteraturgeschichte*, p. 24 *et seq.*

DEMĀWEND, the highest point in the mountains on the borders of Northern Persia, the Elburz (cf. the article ALBURZ, p. 251), somewhat below 36° N. Lat and about 50 miles N. E. of Ṭeherān. According to de Morgan it rises out of the Plateau of Rēhne to a height of 13,000 feet above it. The various estimates of its height differ; Thomson estimates it at 21,000 feet (certainly too high), de Morgan at 20,260 feet, Houtum Schindler at 19,646, Sven Hedin at 18,187 and in the last edition of Stieler's *Handatlas* (1910) it is given as 18,830 feet. Its summit covered with eternal snow and almost always enveloped in clouds, may be seen several days' journey off as Yāḳūt tells us from his own experience. In good weather and light it may be seen, as Melgunof tells us, from the Caspian sea, a distance of over 260 versts (162 miles). Ḳazwīnī's statements on this point are exaggerated; but it is certain that the massif of Demāwend commands the whole coastlands of Māzandarān (the mediaeval Ṭabaristān).

Geologically Demāwend is of recent origin as is clear from its volcanic nature which is shown in several features. There are as many as 70 craters on this mountain mass; from one of them, which is covered with thick deposits of sulphur, rises the conical peak. There are also many sulphur springs on it; Ḳazwīnī mentions "the springs of Demāwend from which smoke arises by day and fire by night". Demāwend is the centre of the earthquake zone which stretches throughout Māzandarān. It is clear from the earlier accounts of Arab travellers that the internal activity of the central volcano had not yet quite ceased as it now has.

Demāwend is rich in minerals, particularly anthracite. Sulphur is found in immense quantities; the finest quality, the best in Persia, according to Pollak (*op. cit.*, ii. 178), is found just below the summit of the mountain, where it is collected in the summer months by the people of Ask and Demāwend and sold by them. Around the foot of Demāwend rise numerous mineral springs of which two, in particular, one in the little town of Ask, the other somewhat farther north on the Herāz (Herhaz), enjoy a great reputation (as baths). The majority deposit considerable sediment; for example Ask is built on the deposits of springs (Pollak, *op. cit.*, ii. 229). The apricots grown in the valleys of Demāwend are highly esteemed in Persia (Pollak, *op. cit.*, ii. 146).

Like the other Titans of Eastern Asia, (e. g. Ararat q. v., p. 420) Demāwend was for long regarded as inaccessible; this opinion which is widely disseminated is found repeatedly in the Arab geographers, though one successful ascent is mentioned; see 'Alī b. Razīn's statement in Ḳazwīnī, p. 159. Oliver (1798) was the first European traveller to visit the mountain, without being able to reach the summit. It was not till 1837 that W. Taylor reached the top; he was followed in 1843 by the botanist Th. Kotschy and in 1852 by the Austrian engineer Czarnotta. H. Brugsch and Baron Minutoli seem also to have reached the summit in 1860; see Petermann's *Geographische Mitteilungen*, 1861, p. 437. In recent years a number of further successful ascents have been made (by Napier etc.) which have usually been undertaken from Ask; cf. especially Sven Hedin, *op. cit.* Inhabitants of the towns of Ask and Demāwend also go up the mountain once or twice a year to collect the sulphur found around the summit.

In the ancient history of Persia, Demāwend is the scene of the legendary history of the Pēshdād and Kayān rulers. Even at the present day the people of Māzandarān point out the different places which were the scenes of the wonderful deeds of Djamshīd, Farīdūn, Sām, Zāl, Rustam and other heroes immortalised in the *Shāhnāma*. Demāwend is also the abode of the fabulous bird Sīmurgh. From ancient times the prison of the cruel king Ḍaḥḥāk (Old Iran. Dahāka, also Bēwarasp) has been located here. Farīdūn (Old Iran. Thraetaona) is traditionally said to have shut him up in a cavern on the summit of this mountain and here the imprisoned tyrant still lives to this day, as the country people believe; the dull sounds which are periodically heard inside the mountain are thought to be his groans, and the vapour and smoke which comes from clefts and springs on the face of the mountain his breath. It is of course evident, that the volcanic properties of Demāwend are responsible for the formation of this legend. The demon Ṣakhr imprisoned by Solomon is also enclosed in Demāwend according to one story. This mountain is thought by the Persians to be the highest in Īrān next to that on which Noah's Ark rested. Cf. the wealth of legends of Demāwend in Yāḳūt, ii. 606, 610; Ḳazwīnī, *op. cit.*; Melgunof, *op. cit.*, p. 22 *et seq.*; Grünbaum in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, xxxi. 238-239.

There used to be many fortified places on the slopes and in the valleys of Demāwend. At the present day the most important place is the little town called Demāwend after the mountain and situated on its southwestern spurs (according to de Morgan 6425 feet above sea-level). It is said to be very ancient and according to Mustawfī used to be called Pishyān. The beautiful valley of Demāwend watered by two rivers with the chief town of the same name and ten villages no longer belongs to Māzandarān but to 'Irāḳ 'Adjamī. In consequence of its high situation the climate is very pleasant; on this account the Shāhs of Persia used to delight in spending the summer in its valleys. The ultra-Shī'ite sect of the 'Alī Ilāhī (see above, p. 292) has a large number of adherents among the inhabitants of this district.

As to the name Demāwend itself, it appears in Persian and Arabic sources in a series of variant forms. Pers. Dunbāwand (Vullers, *Lex. Persic.-Lat.*, i. 907ᵇ), Damāwand (l. c., 902ᵇ), Dūmāwand (l. c., 955ᵇ) and Dōmawand (l. c., 956ᵇ); Arab.: Dunbāwand, Dubāwand, Dumāwand. The oldest form of the name appears to be Dunbāwand. The form Demāwend is now the usually one.

On the different ways of writing the name see Quatremère, *op. cit.*, p. 200 *et seq.*; Fleischer's edition of Abu 'l-Fidā', *Histor. Antislamica* (Lips. 1831), p. 213 *et seq.*, 232 and H. Hübschmann, *Armenische Grammatik* (Leipzig 1897), p. 17.

(M. STRECK.)

DENEB. [See ḎHANAB.]

DENDERA (the form ANDARA is also found) is a place in Upper Egypt on the left bank of the Nile, which now belongs to the district and province of Ḳenā. The name is derived from the Coptic Nitentōri (Greek Τεντυρα). Dendera is celebrated for its temple of Hathor to which all sorts of legends have been attached, as usual in Arabic literature. While the city is said to have been founded by "one of the daughters of the Copts" (Abū Ṣāliḥ) in the time of Manḳā'ūs or by Ḳafṭurīm b. Miṣrāyim, the building of the temple is ascribed to the giants; a great well is also said to have been made by them, which Abū Ṣāliḥ had seen and minutely described. The spirit in whose protection the sanctuary was, had the form of a man with a two-horned lion's head. The images of Hathor etc. seem to have given rise to these ideas. Another wonder, the tree of 'Ablāḳ, is also several times mentioned, the leaves of which closed when it was threatened to cut it down and opened again when it was told it was to be spared. In the Islāmic period Dendera is known to have been the capital of a *kūra* (district) at quite an early date. Towards the end of the vith century A. H., we have various testimonies to its prosperity and wealth in palm-trees. Ibn Duḳmāḳ estimates its yield at 8000 dīnārs. Now it is a small town of no importance and according to Boinet Bey has 6159 inhabitants.

(E. GRAEFE.)

DENIA is the chief town in the north-eastern district of the Spanish province of Alicante, the most southerly of the three modern provinces (Castellón de la Plana, Valencia, Alicante) which make up the ancient kingdom of Valencia, with 14,000 inhabitants, situated almost at the southeast end of the Gulf of Valencia (Sinus Sucronensis) north of Mongo (2196 feet high), in Arabic Djebel Ḳā'ūn = Mon(t)gó, was on account of its good harbour, northwest of the ancient Promontorium Artemisium, Ferrarium or Tenebrium (now called Cabo de S. Antonio, S. Martin or de la Nao) an ancient Phocaean settlement (from Massilia-Marseilles or Emporium-Ampurias) founded in the vith century B. C. and was first called τὸ Ἡμεροσκοπεῖον (Strabo), Hemeroscopion, "the watcher for the day", afterwards Artemisium from the famous temple of the Ephesian Artemis on the hill on which the town was built and since the Roman period Dianium (the town of Diana) whence the Arabic *Dāniya*, with Imāla *Dēniya* and Spanish *Denia*. Although it was a Greek colony allied with the Romans it was spared by the Carthaginians; near it Cato defeated the Spaniards before 195 B. C. It was used by Sertorius, the liberator of Spain, as his last bulwark and station for his fleet; and it was most probably there that he was murdered in 73. Caesar punished it as it was on the side of Pompey (Dianium Stipendiarium). As a municipium however it attained considerable prosperity under Roman rule as excavations show. But it was under Arab rule that it reached its zenith (50,000 inhabitants) after the conquest by Ṭāriḳ in 713 A. D., while nothing is known of it of the period of migrations and the Goths. It played a part in the risings against 'Abd al-Raḥmān I and later, but still more after the extinction of the caliphate of Cordova in 1013, when the 'Āmirid al-Muwaffaḳ, a manumitted slave of 'Abd al-Raḥmān b. Manṣūr, named Abu 'l-Djaish Mudjāhid [q. v.] (Mudjēhid, whence in western sources, Musett, Mugeto) seized Denia and the Balearic Islands [q. v., p. 617] (405—436 = 1014-1015—1044-1045), at first in alliance with the learned Khalīfa al-Mu'aiṭī (1015—1030), and tried also to subdue Sardinia. His son 'Alī Iḳbāl al-Dawla ruled over Denia from 436—468 = 1044-1045—1076, but was dethroned by the Hūdid al-Muḳtadir. Denia remained attached to the kingdom of Saragossa from 1076—1081 when it fell on the partition of this kingdom, with Lérida and Tortosa, to the second son Mundhir of al-Muḳtadir till 1090. His son Sulaimān Sid al-Dawla continued to reign under the regency of the Banū Baitr till after 1092 when Denia was ruled by the governors of the Berber Almoravids and Almohads (with frequent rebellions and reconquest), who held it till in 1244 James I of Aragon's (Don Jaime I el-Batallador) German general Carroz finally won it from the Muslims. In 1356 Denia was made a county by Pedro IV and a duchy by the Reyes Católicos (Ferdinand and Isabella). In 1610 through the expulsion of the industrious Moriscos by Philip III, Denia lost the greater part of its population

and therewith all its importance. As a fortified seaport it played a prominent part in the War of the Spanish Succession on the Archduke's side, was twice besieged by Philip V and taken in 1708. In 1812-1813 it was occupied by the French.

The most celebrated Arab scholar of Denia is the great reader of the Kor'ān Abū 'Amr 'Othmān b. Sa'īd al-Dānī [q. v., p. 912].

DEÑIZ (T.; East. Turk. *tingiz*), Sea. *Karadeñiz*, the Black Sea; *Aḳ-Deñiz*, the Greek Archipelago (also called *Ada-lar deñizi*) and in a wider sense the Mediterranean; it is also the name of a lake north of Antioch in the Wilāyet of Aleppo, which is also called the Lake of Yaghrā and 'Amiḳ-Göl (al-'Amiḳ is the name of the district, see Abu 'l-Fidā, *Taḳwīm*, p. 41 *et seq.*). *Aghadj-deñizi* "ocean of trees" is the name of a great forest with very thick foliage at Izmīd (Nicomedia) in the northeast of the peninsula of Kodja-Ili.

Bibliography: 'Alī Djewād, *Djoghrāfiya lughāti*, p. 17, 34, 556; Sāmī Bey, *Ḳāmūs al-A'lām*, i. 262; v. 3223. (CL. HUART.)

DEÑIZLI, capital of the Sandjaḳ of the same name in the province of Aidin (Smyrna) with a population of 20,000 including 2000 Turkish-speaking Greeks, in the xivth century supplanted Lādiḳ (cf. the form Λαοδίκεια in Cinnamus, p. 25), the ancient Laodicea ad Lycum, the ruins of which still exist at Eski-ḥiṣār on the Čuruksu, near the railway station of Gondjeli, 6 miles from Deñizli. In the wars of the Komnenoi with the Saldjūḳs (xith and xiith centuries) Laodicea was repeatedly captured by the latter. Alexius I occupied it for a brief period in 1098 (Anna Comnena, ed. Reifferscheid, ii. 118 *et seq.*); John Comnenus captured it a second time in 1119 and fortified it (Cinnamus, p. 5; Nicetas, p. 17); in 1158 and again in 1189 the town was sacked by neighbouring Turkish tribes (Cinnamus, p. 198; Nicetas, p. 163 and 523), but remained in possession of the Byzantines, who strengthened the fortifications and made the inhabitants live within the city walls. In 1206 Theodor Lascaris was forced to cede the district of Laodicea and Chonae to Manuel Mawrozomis, the father-in-law and vassal of Kai-Khusraw I (Nicetas, p. 842; cf. *Recueil des Textes Relatifs à l'Histoire des Seldjouc.*, ed. Houtsma, iii. 66, 67 = iv. 26). On the Tatar invasion (1255) however Kai-Kawūs II restored Laodicea to Michael Palaeologus, but the small Greek garrison were unable long to hold the city (Akropol., p. 153 *et seq.*). Lādiḳ and Chonae became the seat of a *uc̣-begi* under the Saldjūḳs (*Recueil* etc., iv. 308, cf. 333).

When Ibn Baṭṭūṭa visited Deñizli in 732 (1331-1332) after the collapse of the Saldjūḳ empire, the town and its environs were in the possession of an independent prince, Inānadj (ed. Defrémery and Sanguinetti, ii. 271; Shihāb al-Dīn, *Not. et Extraits*, ix. 352, 358). Turkomans of the border tribes dwelled in the mountains around Deñizli (Abu 'l-Fidā, transl. by Reinaud, ii. 2, 134). It afterwards belonged to the kingdom of the Germianoghlu of Kiutahia and on the overthrow of these princes by Bāyazīd I was incorporated in the Ottoman Empire. Tīmūr spent some time at Deñizli in the autumn of 1402 on his campaign against Anatolia (cf. Sharaf al-Dīn and Ducas, p. 77). The town which at the end of the xviith century contained 24 quarters with 7 mosques (*Djihānnumā*, p. 634, cf. Ricaut, *Present State of the Greek Church*, p. 58 *et seq.*, Chandler, *Travels*, 2nd ed. p. 221) and in the reign of Bāyazīd II was the residence of one of his sons (Leoncl., *History*, p. 659), belonged to the Eyālet of Anadolu and was surrounded by old fortifications; in 1114 (1702-1703) it was destroyed by an earthquake, by which 12,000 people lost their lives (Rashīd, i. fol. 274b; Pococke, *Description of the East*, ii. 2, 71; cf. Chandler, *loc. cit.*; Hamilton, i. 514); the population moved into the gardens and fields outside the ancient town; cf. the descriptions of the modern town in Cuinet, iii. 613 *et seq.*, and Fr. Sarre, *Reise in Kleinasien*, p. 10 *et seq.*

The name of the town was originally *Denguzlu* (cf. the Arab authors quoted above, 'Āshiḳpashazāde, p. 42, inscription of Ya'ḳūb Germiyānī in the *Revue Historique de l'Institut d'Histoire Ottomane*, i. 118, Schiltberger, ed. Langmantel, p. 53, Leoncl. *Hist.*, p. 659, 684; *Tangusliḳ* or *Tanguzliḳ* in Sharaf al-Dīn) and it was not till later on account of its repulsive meaning (*tonghuz* = *domuz* "swine") that it was changed to *Denghizli* or *Deñizli* (from *denghiz*, *deñiz*, sea).

(J. H. MORDTMANN.)

DER. [See DAR.]

DĒRADJĀT, the name of a tract lying between the River Indus to the E. and the Sulaimān Mountains to the W. which includes the modern districts of Dēra Ismā'īl Khān and Dēra Ghāzī Khān. Until 1901 A. D. the Dēradjāt Division of the Pandjāb included these two districts, and also the District of Bannū, but on the formation of the N. W. Frontier Province of British India the Dēradjāt Division ceased to exist. At present its northern part forms part of that province, while Dēra Ghāzī Khān remains part of the Pandjāb. The name Dēradjāt is a supposed Persian plural of the Indian word Dēra a tent or encampment, and means the 'Country of the Dēras', that is of the three towns of Dēra Ismā'īl Khān, Dēra Ghāzī Khān and Dēra Fatḥ Khān, founded by Balōč leaders in the early part of the xvith century. (See BALŌČISTĀN, p. 636). These three towns were all close to the River Indus, and have been liable to damage by its erosion. Under the Sikh rule Dēra Ismā'īl Khān was destroyed and the present town is modern, Dēra Fatḥ Khān has disappeared

entirely, and Dēra Ghāzī Khān has been almost all swept away in the years 1910 and 1911. The mints of Dēradjāt and Dēra under the Durrānī Kings were at Dēra Ismā'īl Khān and Dēra Ghāzī Khān respectively, and copper coins were struck at Dēra Fath Khān.

The district of Dēra Ismā'īl Khān has an area of 3403 sq.m. and a population of 252,379 in 1901 (of which 218,338 is Muḥammadan). The town and military station of Dēra Ismā'īl Khān has a population of 31,737. The other principal towns are Tānk (formerly under the independent Nawwābs of Tānk), and Kulāčī. The Afghāns form the most important element in the population, especially in the Dāmān or western part, and Balōčes are numerous in the south. The mountain country of the Sherānī Afghāns is also attached to this district. (See also DĀMĀN, p. 901). Dēra Ghāzī Khān is a district of 5306 sq.m. not including the mountains occupied by Balōč tribes, and has a total population of 471,149, of which 412,012 are Muḥammadan. The town of Dēra Ghāzī Khān had before its destruction a population of 23,721. Other important towns are Djāmpur, Dādjil and Mithankōt. 167,322 of the population are Balōč.

Bibliography: *Gazetteer of Dēra Ismā'īl Khān* (Lahore); *Gazetteer of Dēra Ghāzī Khān* (Lahore); H. Edwardes, *A Year on the Pandjāb Frontier* (London 1849).

(M. LONGWORTH DAMES.)

DERBEND, usually written DERBENT by the Russians, called AL-BĀB (the "gate") BĀB AL-ABWĀB (gate of gates) or AL-BĀB WA 'L-ABWĀB (the gate and the gates) by the Arabs, a town in the Russian territory of Daghestan [q. v., p. 887] on the western shore of the Caspian Sea (42° 4' N. Lat.), with about 20,000 inhabitants; it is particularly noted for the long walls, unique in their kind, which used to bar the passage between the mountains and the sea, here only 1½ miles wide, in the Sāsānian and afterwards in the Muḥammadan period and protect the settled areas of western Asia from the inroads of the nomad peoples of Southern Russia.

Apart from the importance of the military and trade route via Derbend, the physical conditions also are here more favourable than anywhere else on the Caspian Sea; unlike the desert lands around Bākū, the land here, down to the seashore, is fertile and exceedingly suitable for the cultivation of the vine and fruits. The district was therefore probably settled at a very early period. The agreement of the statements regarding the breadth of the Sea in Herodotos (i. 203 — eight days' rowing at the broadest part) and in Iṣṭakhrī (ed. de Goeje, p. 226 *et seq.*, "one crosses this sea with a favourable wind in one week the whole breadth from Ṭabaristān to Bāb al-Abwāb") leads one to suppose that even before the Christian era, as in the middle ages, the most important settlement on the west coast of the Caspian was near the modern Derbend. The Pass of Derbend probably formed the northern frontier of the ancient Albania which only became known to the Graeco-Roman world after Pompey's campaign (64 B. C.). Even then the lands south of the pass suffered from nomad raids (cf. Dion Cassius, 69. 15. 1. on the invasion of the Alans in the years 134-135 A. D.); but no mention is made of the erection of any fortifications in the Roman period.

Effective measures for the defence of the pass were first taken by the Sāsānids, who had in the IVth century A. D. extended their influence to the Pass of Derbend and driven the Romans out of the country round. The Roman government was also to contribute to this purpose, at the Persian king's desire, for the warding off of the nomad hordes was a vital question for both empires. We have no record in contemporary sources of the fulfilling of this request; only the Armenian Levond says that in 716 A. D. in the time of the Caliph Sulaimān, the Arabs found an inscription here in which the Emperor Marcian (450—457) is described as the builder of the city (Marquart, *Ērānshahr*, p. 105). In any case a strong fortress was built here by Yezdegird I. (438—457 A. D.); towards the end of his reign this was destroyed by rebellious Albanians, and the invasion of the Huns in 454 facilitated (Elishe in Marquart, *Ērānshahr*, p. 97). In local tradition (*Darband-Nāmah*, ed. Kazem-Beg, p. 11) also Yezdegird appears as the first king who cleared of sand and repaired the wall said to have been built here by Alexander the Great.

Khusraw Anūsharwān (531—576) built a stronger fortress here. Of this we only have legendary accounts from the Arab period; but it is very probable that the great and costly building was actually necessitated by the dangers which threatened the Persian Empire from the north in the reign of this king. All the nomadic peoples from the Black Sea to the Chinese frontiers had just then been united into an empire which had entered into an alliance with the Romans against Persia; in the year 569 the Alans, the nearest neighbours of the Persians on the Caspian Sea, were still independent but by 576 the Turkish ruler was able to say to the Byzantine ambassador that he had recently subdued the Alans (*Fragm. Hist. Graec.*, iv. 229 *et seq.* and 246); the great nomad empire of the Turks had thus reached the Persian frontier. If the fortification of the Pass of Derbend was actually the result of these happenings, the erection of these defences must date from the latter part of the reign of Khusraw. That the king himself came here and superintended the building operations in person, is probably as little worthy of credence as the later Muḥammadan local tradition which makes the Caliph Hārūn al-Rashīd visit Derbend and spend seven years (180—187 = 796—803) there (*Darband-Nāmah*, p. 108 *et seq.* and 140). Even Muḥammadan tradition itself has preserved another story of the building of Derbend, according to which it was not the king himself but his governor Narsē b. Djāmāsp, the ancestor of the Shirwānshāhs, who built the town and its walls at his command (Ẓāhir al-Dīn al-Mar'ashī, ed. Dorn, p. 38).

All that we know of the appearance of the walls, their style of architecture etc., only dates from the Arab period and must therefore be discussed later in this article. Accounts which can be directly traced to Persian reports of the pre-Muḥammadan period are entirely wanting; we do not even know what the Sāsānids called the town and the fortress. On a basis of the Greek Τζούρ and the Armenian Čoł Marquart (*Ērānshahr*, p. 101) has proposed a Persian form Čōr. The name "Darband" (Pers. "gate") is first mentioned in the *Geography* of Pseudo-Moses Khorenatsi

(transl. Patkanov, p. 38) which was not composed before the vii^th^, and possibly, as Marquart says, not till the viii^th^ century A. D.

The Greeks and Armenians only tell us that the fortress, in spite of its strong walls, was captured by the Khazars allied with Heraclius in 627 (cf. Theophanes, Bonn ed., p. 486 and Moses Kalankatuači in Manandian, *Beiträge zur Albanischen Geschichte*, p. 41, where the great city of Čol with its marvellous walls is mentioned). The Arabs also had several times to fight for the possession of Derbend with the Khazars. The statements in the Arab sources regarding these wars, as on most of the campaigns of the first (vii^th^) century, are in part embellished with legendary matter and in part quite fictitious; even the account of the heroic death of Salmān b. Rabīʿa (22 = 643) and his 4000 warriors (Balādhurī, ed. de Goeje, p. 403 *et seq.*; Yaʿḳūbī, ed. Houtsma, ii. 194), whose tomb is still pointed out in the cemetery at the Ḳirḳlar Gate, is in contradiction to Ṭabarī's account, according to which it was not Salmān but his brother ʿAbd al-Raḥmān who fell in this battle (i. 2669) while Salmān appears as late as the year 34 = 654-655 as governor of Derbend (i. 2928, 3). In any case it is only in quite modern times that the story has been localised in Derbend; in the middle ages the tomb of Salmān was pointed out in the northern part of the modern Daghestan at Balandjar: even as late as 1638, Adam Olearius (*Reise*, p. 721 *et seq.*) heard another story about the tombstones at the Ḳirḳlar gate.

The real founder of Arab rule in Derbend was Maslama b. ʿAbd al-Malik, who is also said by the Armenian Moses Kalankatuači (transl. Patkanov, p. 261) "to have rebuilt Derbend in the name of the Tazik (Arabs)". According to Ṭabarī these building operations were carried out in 115 = 733-734; in the original Arabic text (ii. 1562) they are only briefly mentioned (as also is the case in Ibn al-Athīr, v. 134), while in the Persian edition by Balʿamī, on the other hand, they are minutely described (cf. Dorn, *Beiträge zur Geschichte der kaukasischen Länder und Völker*, iv.), as well as (with some variations), in Balādhurī, p. 207 *et seq.* Maslama is said to have settled 24,000 of his Syrian troops here; according to Balʿamī these Arabs belonged to Damascus, Ḥimṣ, Kūfa and al-Djazīra, and the town was divided into four parts corresponding to these towns; this division was still in existence in the time of Balʿamī (on his authority). Three depots (*hury*) were erected for the requirements of these troops, one for victuals, the second for barley (as fodder for the horses) and the third for weapons.

In spite of all these measures Derbend fell for a brief period again into the hands of the Khazars in 183 (799) in the reign of Hārūn al-Rashīd; from there they ravaged the land as far as Kura and carried off a large number of prisoners. According to the Arab sources (Yaʿḳūbī, ii. 518; Ṭabarī, iii. 648; and the *Derbend-Nāmeh*, p. 132 *et seq.*) the enemy was summoned by Haiyūn b. Nadjm (or al-Munadjdjim) al-Sulamī, the son of a governor of Derbend who had been executed as a rebel.

During the centuries following Derbend seems to have enjoyed great importance as a harbour on the Caspian Sea and also as the farthest outpost of the Muḥammadan world. The city was then larger than Ardabīl or Tiflīs (Iṣṭakhrī, p. 184 *et seq.*) and was 2 miles in length and in breadth so that it was not limited to the long narrow strip (nowhere as much as 400 yards in breadth from north to south) between the two stone walls, which it has occupied since the vii^th^ (xiii^th^) century. This is also confirmed by Iṣṭakhrī's statement that in addition to the stone walls there were others of brick and mud; these walls apparently surrounded those parts of the city which lay outside the stone walls (naturally to the south, as the stone walls were erected as a defence against enemies from the north. The stone walls were 300 ells (*dhirāʿ*) broad (Ibn al-Faḳīh, p. 288; Ḳudāma, p. 260; Yāḳūt, i. 440; Zakarīyā Ḳazwīnī, ii. 341; wrongly translated by de Goeje in *Bibl. Geogr. Arab.*, vi. 201: trois cents coudées de hauteur); this figure obviously can only refer to the space between the two walls. The Sāsānids had built these walls of blocks of stone and lead; how the one material was joined to the other, we are only told by Muḳaddasī (p. 380); the lead was used as mortar (*milāṭ*). According to Hilāl al-Ṣābī (ed. Amedroz, p. 217 *et seq.*) there were two holes in each block of stone and an iron bar (*ʿamūd*) in each fixed with molten lead. It was apparently the same style of building that Ṭabarī (i. 2492) says the former architect to King Khusraw Parwīz had taught the Arabs in Kūfa. The stones were brought from the mountains of Ahwāz (Khūzistān), pierced and filled with lead and iron bolts (*saffūd*). Such holes can still be seen in blocks that have fallen from the walls of Derbend but there has for long been no trace of lead or iron.

According to Muḳaddasī (p. 376) the walls had towers, in which mosques and watch-towers (*ma-sādjid wa ḥarrās*) were built. There were only two gateways to the north to the land of the Khazars, i. e. in the modern north wall, a large (*al-Bāb al-Kabīr*) and a small (*al-Bāb al-Ṣaghīr*), with a third which was kept closed not far from the Sea. These gates are called *Bāb al-Djihād* and *Bāb al-Imāra* in Ibn al-Faḳīh (p. 291 *et seq.*); the figures of lions mentioned by Ibn al-Faḳīh have survived to the present day on the gates referred to, now called Kitkhlar and Tash-Ḳapi; the Ḳirḳlar gate is still mentioned in the xii^th^ = xviii^th^ century by the name *Bāb al-Djihād*. Similar figures many also be seen on the "middle" gate (Orta-Ḳapi) of the south wall; on it there is also a Kufic inscription dated Radjab 435 (3rd February—3rd March 1044). Neither this gate nor the other gates of the south wall are mentioned by the mediaeval geographers. Muḳaddasī only says that there were a "number of gates" in Derbend facing the sea and the land of Islām.

The houses of the town were as they still are built of stone. The only individual building described by Muḳaddasī is the chief mosque of which he gives a brief account; it stood on the centre of the market-place (*wasaṭ ʾl-aswāḳ*); beside it was a spring or fountain (*ʿain*). According to local tradition the chief mosque is at the present day on the same site on which it was built by Maslama (or Abū Muslim; on this confusion cf. the article DAGHESTAN, p. 889) in 115 (733). In the xii^th^ (xviii^th^) century there was an inscription (*ʿamal ustād Tādj al-Dīn* = work of the master Tādj al-Dīn) with the date 770 = 1368-1369.

The name of the architect has since disappeared; the modern (first mentioned in the forties of the xix[th] century) inscription is written partly in Arabic (the alleged foundation of the mosque in 115, with blessings on Muḥammad and his family) and partly in Persian; the second part is: *ustād masdjid dar haftṣad wa haftād ʿimārat kard Afrīrūz b. Tahmūz bayārī-i ḥaḳḳ taʿālā* ("this mosque collapsed in 770 and was rebuilt by Afrīrūz b. Tahmūz with help of the Most High God". The Afīrūz mentioned here (probably an error for Afrībarz; he was apparently a prince of Derbend or Shirwān) is not mentioned in any historical works that have as yet come to light.

It remains to be ascertained whether the whole building was actually destroyed in 770 (1368-1369) (probably by an earthquake) and entirely rebuilt. The central nave (the entrance is on the north side) with its two inartistic cupolas seems to belong to a later period than the two side galleries, each of which is divided into two parts by a row of stone pillars; a small arch is supported by each pillar; these arches like the cupolas are not of stone but brick. The internal fittings of the mosque in their present form are quite modern. As Hanway (*Travels*, i. 256) tells us, Nādir Shāh took possession of the building which was still in the early decades of the xviii[th] century a sanctuary of Islām, for secular purposes and used it as a storehouse; it did not therefore revert to its original purpose as a mosque before the middle of the xviii[th] century.

Unlike the modern town, the Derbend of the x[th] century had no citadel; the space between the two stone walls, to which the city itself was afterwards limited, probably sufficed for the garrison. There was a pile of wood constantly replenished on the Dhi'b ("wolf") hill nearest the town, probably where the citadel now is, which was set on fire on the approach of an enemy to inform the people of the border provinces of the danger threatening.

The walls built by Khusraw Anūsharwān were not only to bar the Pass itself, but the adjoining mountain ravines also, by passing through which the fortress might be avoided. The walls are therefore said to have been built "up to highest mountain tops". The distance between the shores of the Caspian and the end of the walls is variously given; according to Ibn al-Faḳīh (p. 291) it was 7 *farsakhs* (1 *f.* = 4 miles), to Ḥamza Iṣfahānī (ed. Gottwaldt, p. 57) 20 *farsakh*, while Masʿūdī (*Murūdj*, ii. 2) says it was 40 *farsakh*. Traces of these long walls have been seen by recent travellers also, but it has never been definitely ascertained how far to the west such traces are known to exist. Even at the present day one may be told in Derbend that the wall built by Khusraw Anūsharwān stretched to the Black Sea or even to Constantinople.

To secure the fortress from attack from the sea also, Khusraw is said to have extended the wall not only down to the shore but also some distance farther. As to how this building was executed we possess two different accounts, one in Ḳudāma (p. 260 *et seq.*) and another in Masʿūdī (*Murūdj*, ii. 196 *et seq.*), but it is clear that neither can claim to be in the slightest degree reliable; both only show how later generations sought to explain how this wall was built. We only have contradictory statements also as to how far these breakwaters were carried out from the shore. Ibn Rusta (ed. de Goeje, p. 148) and Ḳudāma say 3 miles; according to Masʿūdī (*Murūdj*, ii. 2) it was only one, according to Ḥamd Allāh Ḳazwīnī, ½ mile, to Hilāl al-Ṣābī 600 ells, while the Persian translator of Iṣṭakhrī (ed. de Goeje, p. 185, note 2) says it was 6 towers. We would probably be right in taking the two last statements as accurate; as the distance between each tower is little more than 100 ells, the account in the Persian version of Iṣṭakhrī practically agrees with that of Hilāl.

In any case it is clear that Derbend then instead of the present open and dangerous roadstead had a harbour protected alike from hostile attacks and the tempests of the Caspian. Only a small entrance was left for ships, which in case of need could be closed by a chain with a lock (*ḳufl*); no ship could enter or leave without the permission of the keeper of the lock (*Ṣāḥib al-Ḳufl*) (Ibn Ḥawḳal, p. 242). This explains why Derbend was not affected by the Russian raids in the iv[th] = x[th] century.

For the same reason the harbour of Derbend was then of much greater commercial importance than now. Goods were brought to Derbend from all the Muḥammadan and non-Muḥammadan lands of the Caspian Sea. The most important articles exported were linen goods (these were to be obtained nowhere else, neither in Arrān, nor Armenia, nor in Ādharbaidjān) and madder; the principal imports were slaves from the "lands of the unbelievers" (Iṣṭakhrī, p. 184).

This is practically all we know of Derbend in the period of its glory. It is more difficult to get a clear idea of its political conditions, particularly of its relations to Baghdād. Balādhorī's statement (p. 207) that in his time no new governor was allowed to enter Derbend till he had divided a sum of money among the inhabitants, is significant. The *Darband-Nāmah* (p. 134) even says that Hārūn al-Rashīd granted the people of Derbend the right to depose a governor appointed by the Caliph, if he had been negligent in prosecuting the *Djihād* or treated his subjects unjustly. The descendants of a certain Aghlab al-Sulamī are said to have been invested with the right of governing the town till the arrival of the new governor, when a governor died or was dismissed. This is probably much exaggerated but as a matter of fact history does know of a considerable number of princes and governors of Arrān and Derbend of the Sulamī family, from Usaid b. Ẓāfir, the contemporary of the Caliph Hishām, to Saif al-Dīn Muḥammad b. Khalīfa mentioned by the traveller Abū Ḥāmid Andalusī (in Dorn, *Mélanges Asiatiques*, vi. 702) in the vi[th] = xii[th] century (cf. also the above quoted accounts of the rising in the year 183 = 799).

In Yāḳūt, Ibn al-Athīr and later writers, the town is frequently called "the Derbend of Shirwān" and actually seems to have usually belonged to the kingdom of the Shirwānshāh from the iv[th] (x[th]) century; but there were at times also rulers in Derbend independent of the Shirwānshāh (cf. the article ARRĀN, p. 460 *et seq.*). The people of Derbend under the Caliph, as well as under Yūsuf b. Abī 'l-Sādj, ruler of Ādharbaidjān (288—315 = 901—927), had not to pay taxes but only give presents, like the people of the frontier countries in general as defenders of the faith; it was not till the time of Marzubān Sallār b. Muḥammad that these presents were replaced by a fixed tribute.

Ibn Ḥawḳal (p. 254) gives the tribute for the year 344 (955-956). Naturally the inhabitants were not pleased with this change; this probably explains why (Ibn al-Athīr, viii. 376) Marzabān Sallār had to suppress a rising in Derbend in the same year (344).

At a later period also Derbend appears as a practically independent frontier town, which only applied to the central government for help in time of danger. According to Ibn al-Athīr (x. 434), for example, the help of Sulṭān Maḥmūd b. Muḥammad was sought by the people of the frontier lands, particularly of Derbend, against the Georgians and Kipčaks and he therefore undertook a campaign in these lands in the year 517 = 1123.

It is important to note a fact to which little attention has hitherto been paid, viz., that Derbend was lost to the Muḥammadans for a period in the vith = xiith century and was only regained by them with the help of the Georgians. This is clear from a *ḳaṣīda* of the poet Khāḳānī given by Khanikow (*Mélanges Asiatiques*, iii. 127 *et seq.*); the poet praises the Shirwānshāh Akhistān b. Manūčahr who destroyed a Russian fleet of seventy sail at Bākū, conquered the Khazars and Alans, "made Derbend a hell and aroused lamentations in Shābarān"; he adds "the Shāhānshāh has today wrought the same confusion in Derbend and among the Russians as these men with dogs' hearts had previously wrought in Shirwān; Derbend and Shābarān have been won by his sword with God's help".

These words show that not only Derbend but also Shābarān which lay much farther to the south at the modern Kuba, had for a period been taken from the Muḥammadans. As Kunik (quoted by Dorn, *Caspia*, p. 304 and introduction p. xxxvii), has shown, the victories of the Shirwānshāh celebrated by Khāḳānī must be placed about the year 1175. The annals of Georgia ascribe the conquest of Shābarān to Georgius III. (1156—1184), King of Georgia, who is said to have given the town to his ally, the Shirwānshāh. It was probably not till later, in the time of the Georgian queen Thamar (1184—1212) who extended her rule to Caspian Sea, that Derbend came into the possession of the Shirwānshāh.

In Ibn al-Athīr's account (xii. 252, 264 *et seq.*) of the first appearance of the Mongols (619-620 = 1222-1223) the Shirwānshāh Rashīd is mentioned as the ruler of Derbend; the Mongols were shown a way by the envoys of the Shirwānshāh, by which they could avoid the fortress; the town was therefore spared by them on this occasion (the long walls built by the Sāsānids had apparently long lost their importance). A few years later Nasawī (ed. Houdas, p. 172 *et seq.*) mentions Derbend as a separate principality independent of the Shirwānshāh; Shāh Afrīdūn was the ruler of Derbend, while the prince of Shirwān was a minor, on whose behalf al-Asad managed the government. The town was even then still regarded as an impregnable fortress, which could only be taken by treachery; nevertheless after the retreat of the Mongols and still under Rashīd the Kipčak succeeded in surprising the town and taking it for a short time. Derbend had to surrender to the Mongols in 1239. From the *Journal* of William of Rubruck, who spent a day (17th—18th November 1254), it is clear that the Mongols had destroyed the upper parts of towers and the battlements of the walls. He is also the first to mention the citadel. The town itself was more than a (French) mile long and only a stone's throw broad, that is to say, it was by this time limited to the space between the two stone walls (cf. F. Schmidt, *Über Rubruck's Reise*, Berlin 1885, p. 84). After this period, this disproportion between the length and breadth of the town is emphasised in all descriptions of Derbend; Zakarīyā Ḳazwīnī (ed. Wüstenfeld, ii. 340) is the first Arab to mention that the town is $\frac{2}{3}$ *farsakh* long and only an arrowshot broad in contrast to the account of Yāḳūt and the geographers of the ivth (xth) century.

In the period of Mongol suzerainty, Derbend appears to have belonged sometimes to the Shirwānshāh and sometimes to princes of its own; the Khāns of the Golden Horde are sometimes mentioned as suzerains of the land and sometimes the Mongol Il-Khāns of Persia. Tīmūr's opponent, Tokhtamish, struck coins in his name here; Tīmūr himself passed through Derbend on his campaign against Tokhtamish (797 = 1395) as well as on his return from this campaign (798 = 1396); as the frontier fortress of the empire founded by Tīmūr, Derbend was again as before entrusted to the Shirwānshāh. In 1428 an independent prince of Derbend is mentioned; the Italian merchant Giovanni della Valle built a small ship for this prince, with which he made piratical attacks on the ships coming from Astarābād (Ramusio, *Viaggi*, ii. 92^{a}).

The town appears in this century to have finally lost its earlier importance as a seaport. When Ambrosio Contarini was here (November 1475—April 1476), only the citadel and the part of the town adjacent to it, about a sixth of the area between the walls, were occupied, the other parts of the town down to the sea shore being quite desolate (Ramusio, *Viaggi*, ii. 120^{b}). Apart from the damage done by robber raids and the frontier wars the decline of Derbend must probably also be connected with the rise of Bākū (q. v. p. 609). Apparently the petty local princes did not have sufficient means at their disposal to maintain the breakwaters described by the geographers of the ivth = xth century; when these fell into disrepair, trading vessels had naturally to go to the secure harbour of Bākū in preference to the open roadstead of Derbend.

About this time Derbend begins to be described no longer as an Arab but as a Turkish town; an anonymous Venetian merchant of the beginning of the xvith century says that the inhabitants spoke "Circassian or Turkish" (Ramusio, *Viaggi*, ii. 86^{b}). We have no information as to when and how the Arab population became supplanted by Turkish immigrants. This development is probably connected with the gradual Turkisation of Ādharbaidjān and the other frontier provinces of northwestern Persia after the period of the Saldjūḳs, but the name of the above mentioned Saif al-Dīn al-Sulamī proves that in the Derbend of the vith (xiith) century the Arabs and not the Turks still had the upper hand. Not only the Mongol (Ḳahalḳa, on this word cf. the article DAR-I ḲHANĪX above p. 920), but also the Turkish name of the pass (Temir-Ḳapi = Iron Gate) appears for the first time in the Mongol period. It cannot be definitely ascertained when the Turkish folk-legends mentioned in Olearius (*Reise*, p. 721 *et*

seq.) become localised in Derbend; but the same legends are only mentioned by Olearius's contemporaries Ewliyā Čelebi (*Siyāḥat-Nāme*, ii. 312). Legends of the "Tombs of the Oghuz" were still to be heard in Kantemir's time (about 1722) in Derbend; Turkish folk-legends have since been supplanted by legends of religious origin. At the present day no one in Derbend knows anything of Khān Ḳāzān, nor of the patriarch and singer Ḳorḳud, nor of the Oghuz tribe.

In 892 (1487) Derbend was unsuccessfully besieged by Shaikh-Ḥaidar; Shaikh-Ḥaidar fell in battle against the Turkomans of the White Sheep (Aḳ-Koyūnlū) who were called in by the Shirwān-shāh. In 915 (1509) however, his son Shāh-Ismāʿīl, the founder of the Ṣafawī dynasty, succeeded in conquering both Derbend and Shirwān. The siege of Derbend is described in Persian (most fully by Khondemīr, *Ḥabīb al-Siyar*, Teheran edition, iii. 352 *et seq.*) and Venetian (Ramusio, *Viaggi*, ii. 73 *et seq.*, 96 *et seq.*) sources. The town itself was abandoned by its inhabitants on the approach of the Persian army, 40,000 strong; the citadel, whose towers had shortly before been repaired, was only taken after a stubborn resistance by its garrison.

Little is known of Derbend in the Ṣafawī period. The Sulṭān of Derbend appointed by the Shāh was subject to the Khān of Shirwān. In 986 (1578) Özdemir ʿOthmān Pāshā succeeded in taking the town and Derbend remained under Turkish rule till 1015 = 1606. It is probably to this period that the description of the town given by Ḥādjdjī Khalīfa in his *Djihān-Numā* (p. 394 *et seq.*) belongs. Derbend was then 10,500 ells long and 550 broad; the walls with their 70 towers were as high as those of Constantinople on the land side.

After the restoration of Persian suzerainty, Shāh ʿAbbās repaired the walls. When it was seen that the shallowness of the sea here allowed caravans to avoid the town which was an important customs station, a high stone tower was built "in the midst of the sea" and connected with the walls of the mainland; when this was being built, remains of similar erections from an earlier period (large blocks of stone with iron clamps, *mīkhā-i āhan*) were found (Iskandar Munshī, *Taʾrīkh-i ʿĀlam Ārā-i ʿAbbāsī*, Teheran edition, p. 516). The building erected by Shāh ʿAbbās was only able to resist the waves of the Caspian Sea for a brief period; the Russian merchant Fedot Kotow (1623) appears to have been the only traveller to see the tower in the water; even Olearius (1683) only says that the city walls run from the mountains to the sea, so that the waves sometimes dash up against them. The same Shāh had the two walls connected by cross walls, which separated the citadel from the town proper and the latter from the district to the east as far as the sea. This deserted area was then known as Shahr-i Yūnān (city of the Greeks); some travellers have taken this to mean that the Turkish conquerors found a city of Greek merchants here; as a matter of fact the name is to be traced to the legends of Alexander the Great. The cross walls were destroyed in 1824 by the Russians.

After being taken on the 23rd August = 3rd September 1722 by Peter the Great and made a Russian fortress (the house in which Peter lived is still pointed out), Derbend was again given back to the Persians in 1735. Like Peter the Great, Nādir Shāh wished to restore the town to its ancient importance as a seaport; the deserted quarter on the sea shore was again to be settled; to encourage the people by his example, the Shāh ordered a palace to be built for himself there; but these buildings were never carried out or else no trace has survived of them.

After the death of Nādir Shāh and the collapse of the Persian Empire, Derbend again appears as a practically independent principality. In 1765 the town passed into the possession of Fatḥ ʿAlī Khān of Ḳūba, who moved his capital to Derbend and had a palace built for himself in the citadel; this palace which is described by contemporary writers as a most splendid building has now disappeared except for a few insignificant ruins. Fatḥ ʿAlī ruled till 1789; in the reign of his son Shaikh ʿAlī, who allied himself with the founder of the Ḳādjār dynasty, Derbend was taken by the Russians under Zubow on the 21st (10th) May 1786, vacated towards the end of the same year, occupied a second time on the 3rd July (21st June) 1806 by General Glasenapp, whereupon the inhabitants three days later took the oath of fealty to the Russian Emperor.

Under Russian rule Derbend has quite lost its former military importance. Although it did not finally cease to be a fortress till 1867, the proposal to erect fortifications here suited to the requirements of modern warfare was abandoned in the early years after the conquest. The old walls are now only maintained as memorials of the past; individual portions of them, particularly on the south, have had to be sacrificed to the development of the town. Nor has the proposal several times made (last in 1903) to make the roadstead of Derbend a secure harbour by again building breakwaters, ever been carried out. Of the industries mentioned by mediaeval geographers only the growing of madder has been revived under Russian rule; but the demand for this article has been considerably diminished since the invention of artificial alizarin in 1875, which has brought about an economic crisis for the population of the district.

The ancient fortress is now a peaceful city of Muhammadans (about 57%), Russians (18%), Jews (16%) and Armenians (7%) who live chiefly by growing fruit and the vine, and by fishing. The old road over the Pass of Derbend has been supplanted by the railway, completed in 1898, the only one which connects the provinces across the Caucasus with Russia in Europe, whereby the development of the town has naturally been advanced.

Bibliography: The *Darband-Nāmah* composed in Turkish by Muhammad Awābī Aḳtāshī about the end of the xvith or beginning of the xviith century based on a lost Persian work goes only up to the year 456 (1064). The work which has been known since Peter the Great's campaign exists in several MSS.; no critical edition has yet been published; the edition of the text prepared by Kasem Beg with English translation and notes (*Derbend-Nāmeh, or the History of Derbend, translated from a select Turkish version and published with the text and with notes by Mirza A. Kazem-Beg*, St. Petersburg 1851) does not quite meet the needs of modern scholarship. The author of the *Darband-Nāmah* had reliable sources at his disposal but

like his contemporaries in general in Daghestān (cf. p. 889], applied the state of Derbend in his time to the Derbend of the Arab conquerors and their immediate successors. The greater part of what has been written since the time of Peter the Great about the walls of Derbend and the other relics of earlier times that have survived has been influenced by this authority; cf. *Operele principelui Demetriu Cantemiru publicate de Academia Romana, Tomu VII, Collectanea Orientalia*, Bucuresci 1883; Th. S. Bayeri *Opuscula*, ed. Klotzius, Halae 1770; E. Eichwald, *Reise auf dem Caspischen Meere*, 2 vols; ibid. (in the second volume) Ch. M. Frähn, *Die Inschriften von Derbend*; Berezin, *Puteshestvie po Dagestanu i Zakavkazyu*, etc.; B. Dorn (*Bericht über eine wissenschaftliche Reise in den Kaukasus*; *Beiträge zur Geschichte der kaukasischen Länder und Völker aus morgenländischen Quellen*; *Auszüge aus morgenländischen Schriftstellern, betreffend das Kaspische Meer und angrenzende Länder*; *Caspia*) and Khanikow (in the *Bulletins* of the Academy, and in the *Zapiski Kavkazskago Otd'ela Imp. Russkago Geogr. Obshch.* 1853 etc.) have rendered particular service in making known the Oriental authorities. The discussion of the Arabic authorities in G. Le Strange, *The Lands of the Eastern Caliphate*, p. 180, is unsatisfactory. On the occasion of the centenary of Russian rule in Derbend E. Kozubskij has published a history of the town (*Istoriya Goroda Derbenta*, Temir-Khān-Shura, 1906); in spite of all his industry, the author, to whom the Oriental sources were only accessible in translation, and the methods of historical research practically unknown, was hardly fitted for his task. Cf. also the articles by W. Barthold in the *Zapiski vost. otd. Imp. Russkago Arkh. Obshch.*, Vol. XIX, p. XI *et seq.*, 073 *et seq.*; Vol. XXI, p. IV *et seq.* (the author was in Derbend in 1908). (W. BARTHOLD.)

DERE (T.) (also *derre*, Avestan *dar*ᵉ*nā*) "valley".

BÜYÜK-DERE "the great valley", is a valley north of the Bosporus, which runs to the west towards the forest of Belgrade and which has given its name to a village at the sea side which is used as a summer resort and is reached by a large pier. (CL. HUART.)

DEREBEYS, Princes of the Valley, is the popular name given to those influential officials who made themselves independent from the beginning of the xviiith century in Asia Minor and from being officers of the Porte gradually became its vassals. Tolerated and recognised by the government but occasionally also overthrown, if they openly rebelled and disturbed the peace of the country, they founded dynasties and ruled extensive areas, so that at the beginning of the xixth century only the Eyālets of Karaman and Anadolu were still ruled by the Porte's governors. The Derebeys followed the Sulṭān to war and were confirmed by the Porte as representatives of the titular governor with the title *muḥaṣṣil* oder *mutesellim*. Sulṭān Maḥmūd II in the early part of his reign dispossessed the Derebeys by granting their Eyālets to governors of the Porte on the death of the head of the family and sending his descendants to other provinces.

The best known Derebeg families are:

1. The Ḳara ʿOsman Oghlu in Aidin, Manissa and Bergama from the beginning of the xviiith century; they ruled the Sandjaḳs of Ṣarukhan and Aidin and their influence extended from Smyrna to Brusa. They regularly sent contingents to the campaigns of the Porte against Russia and against the Rumelian rebels at the end of the xviiith and beginning of the xixth century and were repeatedly entrusted by the Porte with the suppression of revolts within the bounds of their district. Their justice and good government are commended by contemporary European writers. After 1816 the Porte again took over the government of Ṣarukhan and Aidin. The influence of the Ḳara ʿOsman Oghlu survived their dispossession and they afterwards repeatedly rendered great service to the Porte, for example during the rebellion of Zeibek Kel Meḥemed in 1829 and during the invasion of Asia Minor by Ibrāhīm Pasha in 1833; their descendants still live in Manissa and Kirkaghatch.

2. The Čapan (Čapar) Oghlu of Bozoḳ, of Turkoman origin practically contemporary with the Ḳara ʿOsman Oghlu; they ruled the Sandjaḳs of Bozoḳ (Yozgad), Ḳaisāriya, Amasia, Angora, Nigde, and at the height of their power, Tarsus also was a dependency of theirs. The first Čapanoghlu, of whom we know any particulars, was Aḥmad Pasha, Mutaṣarrif of Bozoḳ, who in 1178 (1764-1765) was deposed by the Wālī of Sīwās by command of the Porte (Wāṣif, i. 233 *et seq.*, 268); he was succeeded by his son Muṣṭafā Beg who was murdered by his bodyguard in 1781 (Djewdet, i. 243 *et seq.*) and succeeded by Sulaimān Beg, second son of Aḥmad Pasha. Sulaimān Beg, the greatest of the Čapanoghlu, played the same role under Selim III, Muṣṭafā IV and Maḥmūd II as the Ḳara ʿOsman Oghlu. After his death in 1229 (1814) his lands passed again under the direct rule of the Porte. His sons filled high offices as wālīs and generals.

3. The family of ʿAlī Pasha of Djānik in Trebizond and the neighbourhood. Their head, Djāniklī Ḥādjdjī ʿAlī Pasha (born in Stambul 1133 = 1720-1721) distinguished himself in the Russian war (1769—1774) as a general in the army on the Danube; in 1773 he invaded the Crimea and was sent in 1778 a second time as Seraskier to threaten the Crimea in conjunction with a large fleet; in 1779 he was attacked by the Čapanoghlu, with whom he had always had a bitter feud, at the instigation of the Porte, fled to Russia, returned after two years and was pardoned; he died in Shaʿbān 1199 = June 1785 as Wālī of Sīwās. He was succeeded by his two sons Miḳdād Aḥmad (executed in 1206 = 1791-1792) and Ḥusain Baṭṭāl (died 1215 = 1801). Khair al-Dīn Beg, the elder son of Baṭṭāl Beg, was the last Derebey of this family; he was executed in 1206. Djāniklī ʿAlī Pasha and his sons opposed the military reforms introduced by Selim III and adopted by the Ḳara ʿOsmān Oghlu and the Čapar Oghlu. After the fall of Selim III, Ṭaiyār Maḥmūd Pasha, a younger son of Ḥusain Baṭṭāl, was appointed Ḳāʾimmaḳām to the Grand Vizier in October 1807 by the reactionary Muṣṭafā IV, but after a few months was dismissed and executed by Maḥmūd II.

4. The Elyās Oghlu of Kushadasi (Scala Nuova near Ephesus); they ruled the Sandjaḳ of Menteshe from about the middle of xviiith century and are not at all prominent; nothing further is known of their history.

It is stated by European authorities in general and sometimes even granted by Ottoman historians that the rule of the Derebeys although it threatened the unity of the empire, was more conducive to the prosperity of the lands they ruled, than the rule of the Porte, which handed over the defenceless provinces to the extortions of the Pas̲h̲as and carried on a system of plundering which utterly sapped the resources of the land. The Derebeys saw to public security, the development of commerce and — with few exceptions — treated the people — including non-Muhammadans — justly; their dispossession was therefore for long lamented by their subjects.

(J. H. MORDTMANN.)

DERĪ (DARĪ), strictly meaning the language of the court, is applied to modern Persian. The abbreviated Persian translation of the treatises of the Ikhwān al-Ṣafā (Bombay, 1804) states that this work was translated into *pārsī darī* by order of Tamerlane; and this work is in Persian. By some confusion the Zoroastrians of Yazd have given the name *darī* to the dialect they speak. The other etymologies current in the east are quite worthless.

DERḲĀWA (plural of the ethnic DERḲĀWĪ) a name collectively applied to the members of the *Ṭarīḳa* or Muḥammadan religious brotherhood, composed of the followers of Mūlāy 'l-ʿArbī al-Derḳāwī, the area of whose influence extends over Northwest Africa, particularly Morocco and Algeria. An individual member is called *Derḳāwī* while the plural is *Derḳāwā*. They are also called S̲h̲ādhiliya-Derḳāwā, their brotherhood being an offshoot of the much older *Ṭarīḳa* of the S̲h̲ādhiliya, founded by the Maghribī Ṣūfī Abu 'l-Ḥasan ʿAlī al-S̲h̲ādhilī.

Origin of the Derḳāwā: The doctrine of the Derḳāwā was first preached by an Idrīsid S̲h̲arīf of the ʿImrāniyīn group, who belonged to the territory in the northwest of Fās occupied by the Banū Ḥasan. He was called ʿAlī b. ʿAbd al-Raḥmān al-Ḏj̲amāl and in his youth during the period of anarchy and civil war which followed the death of Sulṭān Mūlāy Ismāʿīl, had been attached to the service of the Makhzen. Having mislead the S̲h̲arīfs his fellow tribesmen into taking the side of Sulṭān Muḥammad, son of Mūlāy Ismāʿīl, he was obliged to flee from the Maghrib on the fall of this prince in 1151 A. H. (1738 A. D.). He took refuge in Tunis. There he received instruction from various S̲h̲aik̲h̲s and after two years, they persuaded him to return to his native district and recommended him to Mūlāy Ṭaiyib, S̲h̲aik̲h̲ of the *Zāwiya* of Wazzān, where he arrived in 1153 A. H. (1740). Mūlāy Ṭaiyib sent him to Fās where he henceforth remained. There he studied Ṣūfism under the direction of Abū ʿAbd Allāh Ḏj̲assūs and afterwards joined the brotherhood of Abu 'l-Maḥāmid Sīdī 'l-ʿArbī b. Aḥmad b. ʿAbd Allāh Maʿan al-Andalusī, who taught the doctrines of S̲h̲ādhilī. He followed the the guidance of Sīdī 'l-ʿArbī b. Aḥmad for over sixteen years. On the death of the latter he succeeded him and built a *Zāwiya* at Fās in the place called Ḥumat al-Ramila. He had passed his hundred and fifth year when he died in 1193 A. H. according to some, in 1194 according to others (1779-1780 A. D.). He was buried in his *Zāwiya*. Many disciples had gathered around him of whom the most famous was his successor Mūlāy 'l-ʿArbī al-Derḳāwī who was destined to give his name to the brotherhood.

The latter, Abū Ḥāmid Mūlāy 'l-ʿArbī b. Aḥmad b. al-Ḥasan b. Muḥammad b. Yūsuf b. Aḥmad was an Idrīsid S̲h̲arīf, belonging to that section of the Derḳāwā S̲h̲arīfs settled among the Moroccan tribe of Banū Zarwal. These S̲h̲arīfs were so called after their ancestor Yūsuf b. Ḏj̲annūn surnamed Abu Derḳa (the man with the leather buckler). Born after 1150 A. H. (1737 A. D.) Mūlāy 'l-ʿArbī died among the Banū Zarwal, in his Zāwiya at Bū Barīḥ, in 1239 (1823 A. D.).

ʿAlī b. ʿAbd al-Raḥmān al-Ḏj̲amal, Mūlāy 'l-ʿArbī's S̲h̲aik̲h̲, had preached the renunciation of the things of this world, contempt for riches and power, return to the pure sources of Ṣūfism, more especially to the doctrine of S̲h̲ādhilī. His *Silsila* (mystic chain) was traced to the latter through:

1. Sīdī 'l-ʿArbī b. Aḥmad b. ʿAbdallāh Maʿan al-Andalusī;
2. Sīdī Aḥmad b. ʿAbdallāh, father of the above;
3. Sīdī Aḥmad al-Yamanī;
4. Sīdī Ḳāsim al-K̲h̲aṣāṣī;
5. Abu 'l-Maḥāsin Yūsuf al-Fāsī, etc.

These five S̲h̲aik̲h̲s died at Fās in the course of the xi^th^ and xii^th^ centuries A. H. This chain previous to Abu 'l-Maḥāsin who was a kind of reviver of Ṣūfism in Fās, is too well known to be reproduced here. It may, for example, be found in the biographies of the latter, of which we may specially mention the *Mirʾāt al-Maḥāsin* (ed. Fās 1323) and the *Rasāʾil* (letters) of Mūlāy al-ʿArbī al-Derḳāwī, ed. Fās 1318).

Mūlāy 'l-ʿArbī al-Derḳāwī proved himself as strict as his master and followed, moreover, the practices of certain "enlightened ones". One day he met in a street of Fās, standing before a shop, the illustrious enlightened Sīdī 'l-ʿArbī al-Baḳḳāl. The latter was in a state of mystic intoxication, much excited, surrounded by a crowd which he was haranguing. Mūlāy 'l-ʿArbī al-Derḳāwī came to his side. The enlightened saint called him, took hold of him, pressed him to his bosom, and put his tongue into Mūlāy 'l-ʿArbī's mouth saying "suck, suck, suck". He added prophetically: "I give thee (power over) the East and the West". Mūlāy 'l-ʿArbī went on and the "enlightened" saint died two days later. This form of initiation was afterwards revived by several Derḳāwā groups (notably the Habrīya) and the leader of the rising of Margueritte.

Once at the head of his brotherhood, Mūlāy 'l-ʿArbī at once organised it on a solid basis, considerably increased the number of his followers

and gave them in his *rasā'il* (letters) suitable rules of conduct, a kind of law which assured unity of doctrine among them. The *Ikhwān* or "brothers" of the guild who were henceforth known by the name of Derḳāwā (i. e. followers of Derḳāwī) multiplied on all sides. They may be recognised by the staff on which they lean in imitation of the prophet Moses; by the necklet of large wooden beads, which they wear in imitation of Abū Huraira, the companion of the prophet Muḥammad; by the beard generally worn long, and by their garments of rags (among the more fanatical) in imitation of Abū Bakr and of 'Omar b. al-Khaṭṭāb which has earned them the soubriquet of *Abū Derbala* (wearers of rags). Some, especially in Southern Morocco, have adopted the green turban. Their Shaikh had further recommended them to celebrate the praises of God in dancing (*raḳṣ*), to pray alone or in the desert, to walk with bare feet or with simple shoes, to endure hunger, to mortify themselves frequently by fasting, to avoid the society of those in authority and only to consort with men of piety.

Beside these ascetic practices the actual initiation is simple. The Shaikh takes the initiate by the right hand and reads the following verse of the Ḳor'ān (Sūra, xvi, 93): "Be faithful to your covenant with God which ye have concluded with him; and violate not the oaths which ye have solemnly taken. You have taken God as a witness and he knows what ye do". The Shaikh then orders him to recite a hundred times in the morning and in the evening the prayer called *Istighfār*; as follows: "I testify that there is no god but God, the One only, who has no associate, to Him be the dominion and the praise; He is powerful above all". The initiate has to conclude his prayer by saying a hundred times "There is no god but God etc.". Such is the *Dhikr* [q. v.] or prayer peculiar to the order and compulsory. After initiation, the brothers present unite in *Ḥaḍra*, a pious assembly in honour of the new *Derḳāwī*, interspersed with songs and *raḳṣ* (dances), a kind of rhythmic march.

Their political role: Mūlāy 'l-'Arbī's action was greatly encouraged by the Sulṭān of Morocco, Mūlāy Slīmān, who had adopted a policy of harmony with the religious elements and the Sharīfs. The Sulṭān corresponded directly with the shaikh of the new *Ṭarīḳa*. It soon became the fashion at the Moroccan court to be connected with the new brotherhood. Its members were soon to be found throughout the length and breadth of Morocco; the lands in the west and the Regency of Algiers were also covered by its ramifications, which formed a bulwark for the policy of the Sulṭāns of Morocco.

Local tradition traces the first disputes between Turks and Derḳāwā, in the province of Oran, to the difference between the Marabut Derḳāwī Muḥammad b. 'Alī of 'Ain al-Ḥūt, near Tlemcen, and the Bey Ḥādjdj Khalīl, a dispute which was only terminated by the death of the latter (1195 = 1780). The historians however do not mention any disputes arising before the beginning of the xix^th century.

The Turks of the Regency of Algiers had supported the rebellion of the Rīf; Mūlāy Slīmān, Sulṭān of Morocco, in his turn gave asylum to the Marabuts who had had a dispute with the Turks. Suddenly in 1803 at the call of the Moroccan Derḳāwī Sharīf, al-Ḥādjdj Muḥammad b. al-A'radj, surnamed Bū Dali, the Algerian Ḳabyls of the Babor district rose under the leadership of their chief Zabūshī. After some minor successes, the rebels were imprudent enough to attack the Turkish stronghold of Constantine; they were defeated and Bū Dali wounded had to flee. But in the following year, the rebels, having surprised 'Othmān Bey of Constantine's army in the ravines of the lower Rummel valley, massacred it including the Bey. The Turks were obliged to send new forces to Constantine under the command of the Bey 'Abdallāh b. Ismā'īl. In January 1805 the latter defeated Bū Dali and his allies; then towards February 1806, with the help of the Muḳrānī, lords of the Madjāna and feudatories of the Turks, he repulsed the Derḳāwī forces on the west in the High Plateaus in the south of Great Ḳabylia. There also the Turks had to put down risings. The tribe of Ulād Nāïl rebelled and closely besieged Medea after having taken by assault the Turkish fort of Ṣūr al-Ghuzlān, now called Aumale.

While Bū Dali was ravaging the east of the Regency of Algiers with fire and sword, a certain 'Abd al-Ḳādir b. Sharīf, the chief *Muḳaddam* (spiritual lieutenant) of Mūlāy 'l-'Arbī al-Derḳāwī, hurried through the province of Tlemcen, everywhere announcing the immediate expulsion of the Turks from the lands of Northern Africa. By 1805 all the country from Shalif to the Moroccan frontier was in revolt. Muṣṭafā, Bey of Oran, taken by surprise in his camp at 'Ain Forṭāsa, was forced to take to flight and seek safety behind the walls of Oran, the gates of which he walled up. At the same time the Derḳāwā, in connivance with the Moors of Tlemcen, blockaded the Turks of this latter town in their fortress called the *Mashwār* and took the oath of fealty to Mūlāy Slīmān, Sulṭān of Morocco.

The insurrection fomented by the Derḳāwā rapidly gained ground; the Dey of Algiers recalled the Bey Muṣṭafā and appointed as his successor the energetic Muḥammad al-Muḳallish. The latter at once began operations against the insurgents. B. Sharīf was intercepted on his march by various tribes and driven back to the east. A fortunate stroke regained the town of Mascara for the Bey Muḥammad, whose prisoners included the family of his opponent. The latter had retired with his supporters to the Zāwiya of Muḥammad b. 'Awda. He there suffered a crushing defeat. The heads of his followers were cut off and according to the local chronicler thrown at the feet of the Bey "like so many onions" (1807). Another victory at Sūḳ al-Aḥad in the land of the Banū 'Amir, where 600 more Derḳāwā lost their heads, allowed the Bey to proceed to relieve Tlemcen, punish the rebels and restore this town to Turkish authority. But while the Algerian troops were occupied in the east, the centre and west of the Regency, Mūlāy Slīmān conquered Figuig in 1805, Gūrara and Tuāt in 1808. He took from the Turks the whole of the south-east of the Oran territory. The Dīwān of Algiers resented the importance which his successes had given the Bey Muḥammad al-Muḳallish. The latter was suddenly arrested on some ridiculous pretext, then imprisoned and strangled. Muṣṭafā, the previous Bey of Oran, took his place and again proved incapable of holding his own against the Derḳāwā. A year later the

Dey of Algiers had to replace him by the Bey Bū Kabūs (1808-1809). The latter gave the Derḳāwā no rest. ʿAbd al-Ḳādir b. Sharīf, who had again began his exploits against the Turkish governor, was driven back southwards by the new Bey towards ʿAin Mahdī and tried to find refuge there. Not being able to reach it he secretly retraced his steps and took refuge among the Banū Snassen. There with the help of his son-in-law Bū Tarfās, he raised the people of Orano-Moroccan frontier, notably the Trara. The Bey marched against the latter, defeated them, but while returning his column was overwhelmed by snow and he had to retreat hastily with his army in confusion. He was afterwards recalled to Oran, deposed and decapitated.

All the northern Oran territory then rose in rebellion. An energetic officer, ʿAlī Ḳarabaghlī, working in conjunction with the Turks, shut himself up in Mazūna and held out against the insurgents while ʿOmar Agha, the Dey's envoy, went to deliver the garrison of Nedroma on the frontier. ʿAlī Ḳarabaghlī was appointed Bey and the two leaders marched with their forces through the districts of Tlemcen and Trara to impress the inhabitants and keep them under control.

Peace was maintained for some time in the west of the Regency. But in 1816, during the bombardment of Algiers by the English, ʿAbd al-Ḳādir b. Sharīf reappeared, raised the Aḥrār on the frontier and marched against the Turks. The Bey scattered his forces and B. Sharīf retreated to Figuig.

The Sulṭān of Morocco however was not long in resenting the influence of Mūlāy ʾl-ʿArbī al-Derḳāwī and his followers. He suspected or accused him of abetting the rebels in his kingdom and threw him into prison. Mūlāy ʾl-ʿArbī regained his freedom on the death of Sulṭān Mūlāy Slīmān in 1821. Henceforth the Derḳāwā no longer appear to play the principal part in the militant policy against the Turks. They were to resume this role on the French conquest.

In 1834 the Derḳāwī Si Mūsā raised the Ulād Nāil and led them on a holy war against the Christians. He occupied Medea but was defeated in 1835 by the Amīr ʿAbd al-Ḳādir whose plans he had upset. He reappeared at a later period in the insurrection of Zaatsha in which he was killed.

Ten years later in 1837, the Muḳaddam Derḳāwī Si ʿAbd al-Raḥmān al-Tūtī assisted by about thirty of his followers, all of the tribe of the Banū ʿAmir, tried to surprise the fort of Sidi Bal ʿAbbās but the small garrison defended itself bravely and repelled its assailants who were almost all slain.

This feat of arms marked the end of the heroic period of the Derḳāwā, at least in Algerian territory. The Zāwiyas of the order had given evidence of their stern and uncompromising creed, they had thus justified their existence in the eyes of a fanatical people. Once firmly established, accepted by the masses, with branches throughout the country, they limited themselves to increasing the revenues which supported the mother Zāwiya. Outwardly at least they have submitted to authority. This is a kind of law from the operation of which no Muslim brotherhood escapes. At the time of the insurrections in South Oran in 1864 and 1881, no chief of this brotherhood took part openly against the French. And again during the rising of Marguerite at Miliana in 1898, which was caused by an adept Derḳāwī, the chief of the Derḳāwā of the district, Si Ghulām Allāh used his whole influence to calm the turbulent spirits. Ḥādjdj Aḥmad wuld Mabkhūt, the Muḳaddam of of the brotherhood among the Hamiyān of the plateaus on the west Algerian frontier and his successors have always faithfully followed the instructions of the French authorities. The Muḳaddam of the Derḳāwā of Oran, Ḳaddūr b. Slīmān, also confined himself to spiritual activity and recommended his Khwān to submit to the government authorities.

In opposition to the Algerian Derḳāwā those of East Morocco waged a constant war against the French authorities up to the occupation of the Algero-Moroccan hinterland in 1907. The occupation of ʿAin Sefra 1881 brought them into immediate contact with the French. The Sharīf Si Muḥammad al-Hāshimī b. al-ʿArbī, the head of the Zāwiya of Gaūr in the Madaghra country, the most important Zāwiya in Morocco next to that of Bū Barīḥ, preached a holy war against the Christians; but his advanced years (he was over 80) did not allow him to take effective action in person. The same thing happened in 1885 on the occupation of Djanān b. Razḳ. In 1887 their resentment was turned against the Moroccan government which was accused of having come to terms with the Christians. The death of their aged leader in February 1892 brought confusion into the Derḳāwā order of the south. Si Muḥammad b. al-ʿArbī had appointed as his successor Si al-ʿArbī b. al-Hawārī, head of the Zāwiya of Farkla, acting solely for the best interests of the brotherhood. But his sons would not agree to this arrangement; they founded rival Zāwiyas in opposition to those of their father's successor while a certain number of Sharīfs at the head of other Derḳāwī communities sought to promote further secessions from the brotherhood for their own advantage. These schisms along with the independent spirit of the Berbers rendered the hostility of the Derḳāwā groups in the south to the French advance, which took advantage of the dissensions of the rival groups, largely ineffective. Then a certain ʿAlī wuld Ḥaddī, of the Berber tribe of Aīt Atta, organised against the French the attacks at Meturfa and Timimūn. At the same time, anarchy reigned supreme in Tafilalt; a number of Derḳāwā of the district formed a *ṭāʾifa* or band, called *Ṭāʾifat al-Ḥarrāḳ* (from the name of the founder) representing the most violent school of opposition to established authority.

To meet this agitation and the threatening plans of France in the east, the principal Muḳaddams, wishing to be free from the state of uncertainty in which they found themselves, and to decide on a uniform plan of action, decided to appoint a *Shaikh*, who would have supreme guidance of the brotherhood. The assembly of delegates from the Zāwiyas in September 1901 elected Muḥammad b. Aḥmad, superior of the Zāwiya of Safrā. This nomination was generally well received. Although in Madaghra the sons of Si Muḥammad al-Hāshimī b. al-ʿArbī hastened to accept him, Si ʾl-ʿArbī b. al-Hawārī, on the other hand, declined to recognise his authority. The agitation in the southeast of Morocco has since flourished, supported by the innumerable Sharīfs, more or less related to the Sulṭān of Morocco, who live in the

Tafilalt and the adjoining regions and who highly disapprove of their sovereign's innovations.

In the northeast of Morocco, the principal group of Derkāwā has at its head the successors of al-Ḥādjdj Muḥammad al-Habri, founder of the Zāwiya of Driwa, among the Banū Snassen near the Algerian frontier. Their activity has become particularly noticeable on all sides since 1890. The Shaikh al-Habri is the typical wild Dervish, hating non-Muḥammadans and recognising no authority other than that of his religious superiors. He found numerous followers in Northwest Oran; even before the troubles at Margueritte, the activity of his agents in Algerian territory was noticed by the Muḳaddam of the rival (though of the same brotherhood) Zāwiya of the Ulād Lakrād, near Tiaret.

The Franco-Moroccan agreements of 1901 and 1902 appearing to the Berber tribes to threaten their independence led to renewed agitation among them (risings of the Rogui Bū 'Amāra, of the Bū 'Amāma, etc.). The occupation of Barguant in 1904, the institution of the Market of Udjda in 1906 naturally much disturbed the Derḳāwā. A Muḳaddam of al-Habri's, the Shaikh of the Zāwiya of Zagzal was the instigator of the rising of the Banū Snassen against the French in 1907, which led the latter definitely to occupy the lands of these mountaineers.

The plan of introducing conscription among the natives of Algeria likewise aroused the hostility of the Derḳāwā against the Algerian authorities. In 1908, a Muḳaddam of al-Habri's in Tlemcen, named Ḥādjdj Muḥammad b. Illas, being unable to stir his fellow tribesmen to open revolt, preached an exodus into Muḥammadan territory, more particularly into Turkey. He succeeded in creating a certain movement in this direction and several hundreds of families of Tlemcen or the neighbourhood emigrated to Tripolitania or into Syria between 1909 and the summer of 1911. But the war between Italy and Turkey has partly checked this movement, on the other hand the Muḳaddam B. Illas, finding himself in danger, escaped in September 1911 and fled to the East. Two hundred disillusioned emigrants then returned to Tlemcen and the emigration movement, strongly opposed by the authorities, seems to have ceased.

Such has, in a few words, been the part played by the Derḳāwā in the politics of Algeria and Morocco for over a century.

The present state of affairs. This brotherhood, one of the most important in Morocco, if not the most important possesses a large number of *Zāwiya*. The chief is the mother Zāwiya founded by Mūlāy 'l-'Arbī Derḳāwī in his own tribe, the Banū Zarwal, in the place called Bū Barīḥ. This was the favourite residence, far from all civil power, of the great organiser of the brotherhood; it is there also that his successors still live. This Zāwiya exercises an administrative and moral authority over all the others, which is as a rule obeyed. All the groups, without exception, send it their annual offering. Its influence is unrivalled among the Banū Zarwal and is preponderating among the Tamsaman, the Ghumāra and the tribes of the Rif.

This brotherhood under the influence of several large tribes which have adopted its tenets is divided into a certain number of branches. These are, in Morocco:

1. The branch of the Zāwiya of Gafiz, in Madagh̲ra. This Zāwiya was formerly a kind of place of banishment (a measure of prudence on the part of the rulers of Morocco) of the relatives or allies of the Sulṭān who had a claim to the throne. It has become a hotbed of hostility to the Makhzen which is in agreement with the Christians. The influence of this Zāwiya is almost preponderating in Tafilalt, among the Moroccan Berbers of the High Atlas and the Eastern Central Atlas, as well as in the valley of the upper Mulūya.

2. The branch of the Zāwiya of Driwa; its sphere of influence is the Banū Snassen and the N. W. of Oran.

In Algeria, the principal branches are:

1. That of the Ulād Mabkhūt, at Maṭhaṛa. Its sphere of influence is the Hamiyān and certain of the Banū Guil of the Algero-Moroccan frontier.

2. That of Ḳaddūr b. Slimān, of Mostaganem, whose influence dominates the Tell of Oran;

3. That of the Ulād Lakrād near Tiaret, whose influence is preponderant throughout the valley of the Shalif, the mountains of Warsenis and those of Mascara.

There are also a few Zāwiya of little importance in Tunisia, Tripolitania and in the East.

The brotherhood of the Derḳāwā, with some modifications, has given rise to certain religious groups in Morocco, which are even more strict. Such are the Kittāniyyūn (disciples of Sīdī Muḥammad al-Kittānī, author of the *Salawāt al-Anfās*), the Harrāḳiyyūn, veritable anarchists (disciples of Sīdī Muḥammad al-Ḥarrāḳ, 3rd successor of Mūlāy 'l-'Arbī al-Derḳāwī) etc. The influence of these groups hardly extends beyond Fās and its environs. We have already noted the influence of a group of Harrāḳiyyūn in Tafilalt.

COUR.)

DERWĪSH, (DARWĪSH) is commonly explained as derived from Persian, and meaning "seeking doors", i. e. a mendicant (Vullers, *Lexicon*, i. pp. 839a, 845b; *Grundr. d. iran. Phil.* I, i. p. 260; ii. pp. 43, 45). But the variant form, *daryūsh*, is against this, and the real etymology appears to

be unknown. Broadly through Islām it is used in the sense of a member of a religious fraternity, but in Persian and Turkish more narrowly for a mendicant religious called in Arabic a *faḳīr*. In Morocco and Algeria for derwishes, in the broadest sense, the word most used is *'ikhwān*, "brethren", pronounced *khwān*. These fraternities (*ṭuruḳ*, plural of *ṭarīḳa*, "path", i. e. method of instruction, initiation and religious exercise) form the organized expression of religious life in Islām. For centuries that religious life (see ṢŪFISM) was on an individual basis. Beyond the single soul seeking its own salvation by ascetic practices or soaring meditations, there was found at most a teacher gathering round himself a circle of disciples. Such a circle might even persist for a generation or two after his death, led by some prominent pupil, but for long there was nothing of the nature of a perpetual corporation, preserving an identity of organization and worship under a fixed name. Only in the sixth century of the Hidjra — the troubled times of the Saldjūḳ break-up — did continuous corporations began to appear. The Ḳādirites, founded by 'Abd al-Ḳādir al-Djīlānī (q. v., d. 561 A. H.), seem to have been the first still-existing fraternity of definitely historical origin. Thereafter, we find these organizations appearing in bewildering profusion, founded either by independent saints or by split and secession from older bodies. Such historical origins must, however, be sharply distinguished from the legends told by each as to the source of their peculiar ritual and devotional phrases. As the origin of Ṣūfīism is pushed back to the Prophet himself, and its orthodoxy is thus protected, so these are traced down from the Prophet (or rather from Allāh-Gabriel-Prophet) through a series of well-known saints to the historic founder. This is called the *silsila* or "chain" of the order, and another similar *silsila* or apostolic succession of Heads extends from the founder to the present day. Every derwish must know the *silsila* which binds him up to Allāh himself, and must believe that the faith taught by his order is the esoteric essence of Islām, and that the ritual of his order is of as high a validity as the *ṣalāt*. His relationship to the *silsila* is through his individual teacher (*shaikh*, *murshid*, *'ustādh*, *pīr*) who introduces him into the fraternity. That takes place through an *'ahd*, "covenant", consisting of religious professions and vows which vary in the different bodies. Previously the neophyte (*murīd*, "willer", "intender") has been put through a longer or shorter process of initiation, in some forms of which it is plain that he is brought under hypnotic control by his instructor and put into rapport with him. The theology is always some form of Ṣūfīism, but varies in the different *ṭarīḳas* from ascetic quietism to pantheistic antinomianism. This goes so far that in Persia derwishes are divided into those *bā-shar'* "with law", that is, following the law of Islām, and those *bī-shar'* "without law", that is, rejecting not only the ritual but the moral law. In general the Persians and the Turks have diverged farther from Islām than the Syrians, Arabs or Africans, and the same *ṭarīḳa* in different countries may assume different forms. The ritual always lays stress on the emotional religious life, and tends to produce hypnotic phenomena (auto and otherwise) and fits of ecstasy. One order, the Khalwatite (q. v.), is distinguished by its requiring from all its members an annual period of retreat in solitude, with fasting to the utmost possible limit and endless repetitions of religious formulæ. The effect on the nervous system and imagination is very marked. The religious service common to all fraternities is called a *Dhikr* [q. v.], a „remembering", that is, of Allāh (Ḳur. xxxiii. 41 is the basal text), and its object is to bring home to the worshipper the thought of the unseen world and of his dependence upon it. Further, it is plain that a *dhikr* brings with it a certain heightened religious exaltation and a pleasant dreaminess. But there go also with the hypnosis, either as excitants or consequents, certain physical states and phenomena which have earned for derwishes the various descriptions in the west of barking, howling, dancing, etc. The Mawlawites [q. v.], founded by Djalāl al-Dīn al-Rūmī (d. at Konia in 672 A. H.), stimulate their ecstasies by a whirling dance. The Sa'dites [q. v.] used to have the Dawsa [q. v.] and still in their monasteries use the beating of little drums, called *bāz*. The use of these is now forbidden in the Egyptian mosques as an innovation (*bid'a*; Muḥammad 'Abduh, *Ta'rīkh*, ii. 144 *et seq.*). The Sa'dites, Rifā'ites and Aḥmadites have particular feats, peculiar to each *ṭarīḳa*, of eating glowing embers and live serpents or scorpions and glass, of passing needles through their bodies and spikes into their eyes. But besides such exhibitions, which may in part be tricks and in part rendered possible by a hypnotic state, there appear amongst derwishes automatic phenomena of clairaudience and clairvoyance and even of levitation, which deserve more attention than they have yet received. These, however, appear only in the case of accepted saints (*walīs*; q. v.), and are explained as *karāmāt* (χαρίσματα; q. v.) wrought by Allāh for them. But besides the small number of full members of the orders, who reside in the monasteries (*khānḳāh*, *ribāṭ*, *zāwiya*, *takīya* or *tekye*) or wander as mendicant friars (the Ḳalanderites an order derived from the Bektāshites must wander continually), there is a vast number of lay members, like Franciscan and Dominican tertiaries, who live in the world and have only a duty of certain daily prayers and of attending *dhikrs* from time to time in the monasteries. At one time the number of regular derwishes must have been much larger than now. Especially in Egypt under the Mamlūks, their convents were very numerous and were richly endowed. Their standing then was much higher than it is now, when derwishes are looked down upon by the canon lawyers and professed theologians (*'ulamā'*) in the essential contest of intuitionists on the one hand and traditionists and rationalists on the other. For this division see further under Ṣūfīism. Now their numbers are drawn mostly from the lower orders of society, and for them the fraternity house is in part like a church and in part like a club. Their relation to it is much more personal than to a mosque, and the fraternities, in consequence, have come to have the position and importance of the separate church organizations in Protestant Christendom. As a consequence, in more recent times, the governments have assumed a certain indirect control of them. This, in Egypt, is exercised by the Shaikh al-Bakrī, who is head of all the derwish fraternities there (*Kitāb bait al-Ṣiddīḳ*, pp. 379 *et seq.*). Elsewhere there is a similar head

for each city. The Sanūsites [q. v.] alone, by retiring into the deserts of Arabia and North Africa and especially by keeping their organization inaccessible in the depths of the Sahara, have maintained their freedom from this control. Their membership is also of a distinctly higher social order than that of the other fraternities. As women in Islām have generally the same religious, though not legal, status as men, so there are women derwishes. These are received into the order by the shaikh; but are often instructed and trained by women, and almost always hold their *dhikrs* by themselves. In mediæval Islām such female derwishes often led a cloistered life, and there were separate foundations and convents for them with superiors of their own sex. Now, they seem to be all tertiaries. To give a complete list of fraternities is quite impossible here. Besides the separate articles referred to above, see, also, the following: — ʿArūsiya, Ashrafīya, Badawiya (see Aḥmad al-Badawī), Baiyūmiya, Bakrīya, Bektāshī, Djilwatī, Gulsheni, ʿIsāwa, Khalwatī, Nakshbandī, Shādhiliya, Suhrawardī, Sunbuliya, Tidjāniya.

Browne, *The Derwishes, or Oriental Spiritualism* (London, 1868); Hughes, *Dictionary of Islam*, sub *Faḳīr*; D'Ohsson, *Tableau général de l'Empire Othoman*, ii. (Paris, 1790); Sir Charles N. E. Eliot, *Turkey in Europe* (London, 1900); E. G. Browne, *A Year among the Persians* (London, 1893); T. H. Weir, *Shaikhs of Morocco* (Edinburgh, 1904); B. Meakin, *The Moors* (London, 1902), chap. xix.; H. Vambéry, *Travels in Central Asia* (London, 1864) and all Vambéry's books of travel and history; W. H. T. Gairdner, *The 'Way' of a Mohammadan Mystic* (in *Moslem World* for April 1912 *et seq.*); the present writer's article *Derwish* in *Encyclopaedia Britannica*, ed. xi. but to correct by above, also his *Religious Attitude and Life in Islām* (Chicago, 1909) and *Aspects of Islām* (New York, 1911), both by index. (D. B. Macdonald.)

DERWĪSH PASHA, the name of several Turkish generals and statesmen.

a. Derwīsh Pasha, a native of Mostar, who became Governor of Bosnia in 1004 (1595). His Ghazal on the bridge of Mostar has been published in *Wissenschaftl. Mitteil. aus Bosnien*, Vienna, 1843, i. 311.

b. Derwīsh Pasha, Kapudan Pasha in 1014 (1605) and Grand Vizier under Muḥammad III in 1015 (1606) but executed in the same year.

c. Derwīsh Pasha, Grand Vizier under ʿAbd al-Ḥamīd I; disgraced in 1190 (1770) after holding this high office for eighteen months and died soon after in Chios.

d. Derwīsh Pasha, a Turkish general, who commanded in the campaign in 1862 against Montenegro, and was appointed Governor-General and Commander-in-Chief in Bosnia and Herzegovina. He lost this post however when he failed in the revolution of 1875; in 1877 he received command of the troops stationed at Batum and was able to keep the Russians in check; at the end of the war he was sent against the Albanians, in 1882 entrusted with a mission to Egypt which was however unsuccessful. He died in 1896.

Bibliography: Sami Bey, *Ḳāmūs al-Aʿlām*, iii. 2136 *et seq.*; v. Hammer, *Geschichte des Osman. Reiches*, see Index.

DERWĪSH MEḤEMED PASHA, the name of two Grand Viziers. The first of this name held office at the beginning of the reign of Meḥemed IV, after having held various governorships and having been Kapudan Pasha; he was dismissed in 1649 and executed and his vast fortune confiscated.

The second held office under Maḥmūd II, 1818—1820, and died in 1237 (1822) at Yanbuʿ when on a pilgrimage to Medina.

DESHT (dasht) is the name in Persia for a desert or waste tract, and (with the pronunciation Dasht) is used in the same sense in Balōčistān. In Persia the name is applied frequently to the great central desert which is nearly 700 m. long from the N. W. near Tihrān to the S. W. near Sīstān. It is known either as the Desht-i Lūt or simply as the Lūt. Its northern part is frequently styled Desht-i-Kawīr owing to the Kawīrs or salt swamps which are frequent there. According to M. Sykes the whole desert is properly called Lūt and patches of Kawīr are found throughout. The name Lūt is probably derived from the so-called cities of Lūt (or Lot), strange natural formations of the ground.

The Dasht-i-Bē-dawlat or 'miserable plain' is a windswept inhospitable plain on the plateau at the head of the Bolān Pass in Balōčistān. The Dasht-i-Gorān or 'plain of wild asses' is a parched up waste on the coast of Mekrān.

(M. Longworth Dames.)

DEWE BOYŪN (t.) = "Camel-back" a frequent name for mountain ridges (particularly mountain passes) in the districts where Turkish is spoken, e. g.:

1. The name of a ridge east of Erzerūm between the latter and Ḥassān-Ḳalʿa, the watershed between the Euphrates and the Araxes (Ar-Rass) according to Brant's estimate 5637 feet high. In the Russo-Turkish war 1877 this pass played an important part; for the Turkish army had taken up a strongly entrenched position on it. The first attack by the Russians (in the beginning of December 1877) utterly failed but a stratagem tried by them was so successful that the Turkish troops were driven in wild confusion back to Erzerūm.

2. Another southeast of Kharpūt north of Lake Göldjik, the watershed between Murād Čai (the so-called Eastern Euphrates) and the Tigris, somewhat over 4000 feet high.

3. Another northeast of ʿAintāb, 3150 feet high, in 37° 25′ N. Lat. and 37° 51′ East Long. (Greenw.) in the western part of the Ḳara-Dagh. With the name cf. also Dewe-Tepe = "Camel-hill", the name of a hill in Bulghār-Dagh (Cilician Taurus) the two summits of which look like

a camel's back; cf. thereon Th. Kotschy, *Reise in den Kilik. Taurus* (1858), p. 201. An analogous name is that of the famous battlefield of Gaugamela in Assyria, which likewise means "Camel-back" (Aram. *gab gamlā*); cf. thereon my article Gaugamela in Pauly-Wissowa's *Realencykl. der klass. Altertumswiss.*, vii. 863.

Bibliography: 1: Ritter, *Erdkunde*, x. 388, 646, 740, 762, 900, 908; Nolde, *Reise durch Innerarab., Kurdist. u. Armenien* (1895), p. 260 *et seq.* — 2: Ritter, *op. cit.*, x. 904; xi. 14. — 3: R. Kiepert, *Karte von Syrien u. Mesopotam.*, western sheet to M. v. Oppenheim's *Vom Mittelmeer zum pers. Golf* (1900); R. Kiepert writes Dewe Bojnu. (M. STRECK.)

DEWELI ḲARAḤIṢĀR, i.e. the Ḳaraḥiṣār of Dewelu (*dewelünün ḳarāḥiṣāri* in Nashri, *Zeitschr. der Deutsch. Morgenl. Ges.*, xv. 341 and Leunclavius, *Hist. Mus.*, 334) so-called after the district of Dewelu (Houtsma, *Recueil* etc., iii. 104 *et seq.*) to distinguish it from other Ḳaraḥiṣārs in Asia Minor, 30 miles S.W. of Ḳaiṣariya, is frequently mentioned in Saldjūḳ history (Houtsma, *Recueil*, iv. passim), at a later period belonged to the kingdom of the Banī Artena (cf. Max van Berchem, *Matériaux*, etc., 3rd Part., p. 41 and 48) and then to the Karamanoghlu, and was taken in 794 (1391-1392) by Bāyazīd I (Nashri, *loc. cit.*); on the conquest of Karamania by Meḥemmed II in 1474, it fell to the Ottomans by voluntary surrender (Sa'd al-Dīn, i. 550). At the end of the xviith century the district of Deweli Ḳaraḥiṣār formed a judicial division (*ḳaḍā*) of Ḳaiṣariya (*Djihānnumā*, p. 620), but now it is merely a *nāḥiye* of the Ḳaḍā of Indjesu, in the Sandjaḳ of Kaiṣariya in the Wilāyet of Angora, while the district of Dewelu, as in the time of Ḥādjdjī Khalīfa, still forms a separate Ḳaḍā (capital: Ewerek). Only a few ruins remain of the ancient fortifications of Deweli Ḳaraḥiṣār; the town which is noted for its orchards contains a few hundred houses and lies at the foot of the hills in the midst of gardens (Kinneir, *Journey*, p. 109; Hamilton, ii. 284). In the neighbourhood, 2 miles S.W. of Deweli Ḳaraḥiṣār, are the ruins of Zindjibar Ḳal'esi, which is thought to be the ancient Nora.

(Aḥmed Wafīk Lehdje, p. 580, Cuinet, *Turquie d'Asie*, i. 304, 320 both give quite confused and erroneous accounts). (J. H. MORDTMANN.)

DĒWĪ (DHAWĪ). [See DHIŪ.]

DEWSHIRME (Gr. Παιδομάζωμα "collecting boys") is the name applied to the forcible pressing of Christian children to recruit the Janissary regiments, and for service in the Imperial palaces; the practice is said to have been first introduced by Sulṭān Orkhān (*Ta'rīkh-i Ṣāf*, of Tashköprüzāde Kemāl, i. 8 and 21; *'Ālī ta'rīkhi*, i. 13 *et seq.*, 33 *et seq.*), but it is probable that there has been some confusion with the creation of the corps of Janissaries out of the *pençe* contribution of prisoners-of-war, attributed to this Sulṭān; a reliable authority, Bartholomaeus de Jano, writes in the year 1438 that Murād II (1421—1451), created the *decima puerorum super quod prius nunquam fuerat*, while, according to the Turkish sources quoted, this Sulṭān only reintroduced the practice after it had fallen into disuse during the decline of the Empire. In any case it is certain that Dewshirme existed under Murād II (Zinkeisen, iv. 166, note 2). Originally they appear to have been held only every five years (Spandugino, *Comm.*, ed. Florence 1551, p. 123; Verantius in the *Mon. Hung. Hist.* ii. Ser., ii. 303; Georgievis, *De Turcorum Moribus*, ed. Helmstadt 1671, p. 27; Wenner, *Reysebuch*, p. 74), which is perhaps connected with the census; in the xvith century, more often every four, three years or even according to some annually; in the xviith century the intervals gradually became longer until the practice was dropped.

Conscription was practised mainly in the European parts of the Empire with a Christian population (Greece, Macedonia, Albania, Servia, Bosnia and Herzegovina, and Bulgaria); Constantinople with Galata and some other towns, e. g. Nauplia, as well as the islands of the Archipelago, notably Chios and Rhodes, were exempt from this levy of boys; the same is also asserted of the Armenians (see Thevet, *Cosmogr. Univ.*, 799 vs.; La Boulaye le Gouz, *Voy.*, p. 50; the contrary is maintained by Kočibej, p. 27, text = p. 191 of the translation and Wild, p. 215). As soon as an imperial firman ordered the levy, the Janissary officer appointed to the task, usually a *Yayabashi*, but sometimes also an officer of higher rank, went with a number of *sürüdji* ("drivers") to the district allotted him and had the boys of 10—15 years of age produced by the Christian protojeros (elder of the village), according to a list prepared by the latter, so that he might be able to chose those best fitted for service; the original practice was to take one out of every five boys (Thevet, *l. c.*, p. 818), those who were married being exempted. But even by the xvith century gross abuses had crept in; not only was it possible to purchase exemption, but also non-Christian children, Jews, Turks and Gypsies, were smuggled in and the practice, which had become like a modern African slave raid (see the description in Thevet *l. c.* and Verantius and the folk-song in Arabantinos, Ἠπειρωτικά, p. 218), gradually fell into disrepute with both rulers and subjects; the leaders of the levy frequently atoned for their extortions with the loss of their rank and sometimes even with death (Salāniki, p. 263 *et seq.*; Roe, *Negotiations*, p. 534).

The number of recruits thus pressed into the service (*'Adjemoghlān*) is variously given; it varies from 2000 to 12,000; these were first of all brought to the capital and there allotted; some were reserved for service in the Imperial gardens (*bostāndji*, q. v., p. 765) and for the serais provided for their training in Constantinople, Galata and Adrianople (cf. v. Hammer, *Gesch. d. Osm. Reiches*, v. 461 on this point); the others were handed over to Pashas and other dignitaries, artisans, land-owners etc. to be trained and to make themselves useful.

After a few years (five according to Kočibej), during which they acquired the necessary physique and had become quite assimilated to the Turks in religion, language and education, the latter were again collected together to obtain practice in the use of weapons in their barracks in Constantinople; they did not enter the Janissary regiments until the latter's ranks were being filled up, which was usually done every seven years. Those brought up in the Imperial Serais entered the ranks of the pages of the Imperial household in Constantinople as far as they were

fitted for it, where they were educated for the personal service of the Sulṭān, or for the higher branches of service in the court; those who left the palace, were placed in the civil service. In this way many viziers, grand viziers, and other dignitaries of the Sublime Porte rose in the xv[th] and xvi[th] centuries from the ranks of its Christian subjects.

The conditions described were radically altered in the second half of the xvi[th] century.

By the time of Sulaimān I (Zinkeisen, iii. 247; ʿAlī, *loc. cit.*) "foreign" i. e. non-Christian elements had begun to find a place among the ʿAdjemoghlān; under Murād III, in 1582, there was a great Janissary-levy by which all sorts of vagabonds found a place in the corps (Koči̇̄bej, p. 57, and following him Djewdet, ix. 196, cf. *Taʾrīkh-i Sāf, loc. cit.*). Thenceforth Turks by birth and sons of Janissaries were allowed to enlist in greater numbers and ultimately *Dewshirme* fell into disuse, or was only practiced at long intervals and exclusively in Europe. Aḥmad I was the first to abolish it (Lithgow, *Adventures and Peregrinations*, p. 106, Glasgow, 1906); Kantemir, p. 54 says the same of Murād IV while according to v. Hammer, v. 244, the levy of 1637-1638 was the last of its kind. This is not correct. As late as 1651 the Grand Vizier had to promise the refractory Janissaries that in future only the children of Janissaries should be allowed to enter their corps (Ricaut, *Present State of the Ottoman Empire*, in the appendix to Grimstone-Knolles, p. 7), and if the positive assertions in v. Hammer, vii. 555 *et seq.* and vi. 299 (based on the *Reports* of the Venetian bailo and of the Imperial Resident) may be trusted, there were again *dewshirmes* in 1664 and 1674; in the 3[rd] article of the treaty with Poland in 1671 also it was expressly stated that the province of Podolia ceded to the Porte should be exempt from *dewshirme* (Rashīd, i. 73ʳ of the folio ed.). The accounts of European travellers of the second half of the xvii[th] century up till about 1675 and Ewliyā Čelebi, *Travels*, ii. 1, p. 210 likewise speak of the pressing of boys as a practice still in vogue in their time (cf. Tavernier, *Nouv. Rel. du Serrail du Grand Seigneur*, iii. 29; Smith, *De Moribus Turcarum*, p. 81 of the Oxford edition 1674, and *De Eccl. Graecae Statu hodierno*, p. 13; La Boulaye le Gouz, p. 48 *et seq.*; Ricaut *loc. cit.*, p. 19 and *Pr. State of the Greek Church*, p. 22) Aḥmad III again as late as 1703 ordered a levy of 1000 Christian children, but it does not appear to have carried out (v. Hammer, vii. 91); and certainly the attempt was never again made.

Bibliography: The chief source is Zinkeisen, *Gesch. des Osm. Reichs.* iii. 215—231; iv. 166, but he was unable to use the Oriental historians and the Venetian reports not printed in his time and overlooked a number of European travellers — e. g. *Turcograecia*, p. 193 *et seq.*, Tavernier's *Relation*, Ricaut, Smith.

(J. H. Mordtmann.)

DEY, a title borne by the rulers of Algiers and Tunis. The word دائى in Turkish signifies a maternal uncle. According to a legend reported by Venture de Paradis (*Alger au XVIII[e] siècle. Rev. Africaine* 1896, p. 257) the father of the Barbarossas used to enjoin his sons to obey Khair al-Dīn, saying, "He will be your *Dey*". In reality this word seems to have been originally applied to a subaltern in the Janissaries. At Tunis towards the end of the xvi[th] century, it denoted the chief of each of the 40 sections into whom Sinān-Pasha had divided the militia. In 1591 these 40 deys elected one of their number to command the army along with the Agha. The Dey thus chosen soon became the actual head of the government and substituted his authority for that of the Pasha representing the Porte. But since the latter half of the xvii[th] century the Beys, who held lower commands in the army, tended to supplant the Deys. At the beginning of the xviii[th] century Ibrāhīm Bey assumed the title of *Dey*, and this title itself was definitely abolished by Ḥusain b. ʿAlī in 1705. [See the article TUNISIA].

The elevation of the deys was in Algiers, as in Tunis the result of a revolution. Tired of the anarchical rule of the Aghas, the Raʾīs or Corsair captains substituted for them in 1671 a chief appointed for life designated by the name of Dey. At first elected by the assembly of *raʾīs*, the Deys were chosen, after 1689, by the officers of the army. Thirty Deys ruled in succession from 1671—1830. Of this number 14 reached their position by the assassination of their predecessors. In this case the election was a mere sham, the candidate being chosen beforehand and installed by violence. No qualification as regards origin or capacity was necessary to fill the office of Dey. The humblest and most ignorant of the Janissaries could aspire to this dignity; but in fact, most of the Deys before their election had exercised the functions of Khaznadji, Agha or Ōdjat al-Khail. [See the articles ALGIERS and ALGERIA].

Limited in theory by the control of the Dīwān the power of the deys was in reality absolute. The Dey chose his ministers or "Powers", elected as he thought fit the beys of the provinces, administered justice and negotiated with foreign states. He received no emoluments other than the high pay of the Janissaries (50 large piastres a month and mess allowance) but also claimed investiture fees from beys and other officers, had a share in the prizes taken by the Corsairs, received presents from consuls on their taking up their duties and presents from European sovereigns on the conclusion or renewal of treaties of peace, he could enrich himself by partnership with Muslim or Jewish merchants. He had his own treasury apart from that of the State. Most of the Deys amassed considerable fortunes which however were confiscated to the public treasury when the Dey met his death by violence. The might of the Deys was less formidable and their power less stable than one would at first believe. They were really obliged to consult the desires of the military under penalty of being forced to abdicate or to expose themselves to assassination. Very stringent rules regulated their private life. The Dey subsequent to his election was separated from his family, no woman could gain access to his palace except in public audience; he was only allowed to spend in his own house the afternoon of Thursday and the night from Thursday to Friday. A Spanish historian Juan Cano thus describes the Dey of Algiers: "a rich man but not master of his riches, a father without children, a husband without wife, a despot without liberty, a king of slaves and the slave of his subjects".

Bibliography: [See *Bibliography* to ALGIERS and ALGERIA].

(G. Yver.)

DHAHAB, gold, is among metals as the sun among the planets. It is formed by the most perfect amalgamation of the purest sulphur and the finest quicksilver so that it is easily smelted by fire but is not consumed nor does it became rusty no matter how long it may lie in the ground. It is soft, yellow with a tinge of red, bright, sweet to taste, pleasant to smell and exceedingly heavy. It is the magnet of quicksilver and sinks in it; quicksilver deprives it of its colour. Gold may be cast or wrought with the hammer, beaten into thin leaves or drawn out into threads; the finest gold dust may also be used for writing purposes. For making coins and articles of ornament it is combined with silver and copper.

Its costliness is due not to its rarity for it is found in large quantities and is being constantly obtained from mines, but is due to the fact that every one who obtains any, buries it in the ground so that more is buried in the earth than is current among men. As to the importance of gold as a standard of value, Ḳazwīnī informs us that it is the greatest proof of God's grace and the foundation of commerce among men. For perhaps a man who has clothes, has no corn while the man who has corn does not require clothes so that some medium of exchange is necessary which will be accepted as the standard of value. God has therefore created dīnārs and dirhems and threatens those who bury treasures of gold or silver with severe punishment as they render God's wisdom and foresight futile. Rich men who use vessels of gold instead of those of wood or copper are also liable to be severely punished.

In medicine gold is said to be particularly effective in diseases of the eye, melancholia, palpitation of the heart, alopecia, etc. A hole pierced in the ear with a golden needle does not fill up; cauterisation with gold is considered peculiarly effective. The notices of the places where gold is found in the geographers have not yet been collected; many are mentioned by Dimashḳī. Gold is usually found in sandy districts and in soft rocks, generally in the equatorial zone; in colder regions it is only found at a great depth. An account of the manner in which gold was obtained from ʿAllāḳī in Nubia is given by Idrīsī [q. v.]. According to him the goldseekers go by night to the district, seek out a definite area for themselves and note the glittering of the specks of gold in the sand. They mark the spot and come back to it in the morning. They then take the gold-bearing sand, carry it to the springs which are there and wash it in wooden pans; they then take out the gold dust, collect it with the help of quicksilver (*yuʾallifūhu bi 'l-zibaḳ*) and smelt it. Traders then come and carry the gold into foreign countries.

AL-**DHAHABĪ**, Shams al-Dīn Abū ʿAbd Allāh Muḥammad b. Aḥmad b. ʿOthmān b. Ḳaimāz b. ʿAbd Allāh al-Turkumānī al-Fāriḳī al-Dimishḳī al-Shāfiʿī, an Arab author, was born at Maiyāfāriḳīn on the 1st or 3rd Rabīʿ II 673 (= 5th or 7th October 1274) and died at Damascus in the night of Sunday—Monday 3rd Dhu 'l-Kaʿda 748 (3-4 February 1348). He was buried at the Bāb al-Ṣaghīr (the numerical value of his name al-Dhahabī gives the date of his death). Muḥammad b. Aḥmad b. Iyās gives 753 (18 February 1352—5th February 1353) as the year of his death.

In 690 (1291) — according to others at the age of 18 — he began his studies in Tradition at Damascus under the direction of ʿOmar b. Ḳawwās, Aḥmad b. Hibat Allāh b. ʿAsākir etc.; in Baʿalbek with ʿAbd al-Khāliḳ b. ʿOlwān, Zainab bint ʿOmar b. Kindī; in Ḥalab with Sonḳar al-Zainī; in Nābulus with al-ʿImād b. Badrān; in Mecca with al-Tūzarī; in Alexandria with Abu 'l-Ḥasan ʿAlī b. Aḥmad al-ʿIrāḳī, Abu 'l-Ḥasan Yaḥyā b. Aḥmad al-Ṣawwāf; and lastly in Cairo with Ibn Manẓūr al-Ifrīḳī, the author of the *Lisān al-ʿArab*, and particularly with Shaikh al-Islām Ibn Daḳīḳ al-ʿĪd, who is known to have exercised some discrimination in choosing the pupils to whom he would teach *Ḥadīth*. He also received *idjāza* from Abū Zakariyā Ibn al-Ṣairafī, Ibn Abi 'l-Khair, al-Ḳāsim al-Irbilī, etc.

Among his pupils are specially mentioned ʿAbd al-Wahhāb al-Subkī author of the *Ṭabaḳāt al-Shāfiʿiya*. He was a friend of the latter's father, Taḳī al-Dīn al-Subkī, who was stronger than he in Shāfiʿī law.

He became Professor of *Ḥadīth* at the Madrasa Umm al-Ṣāliḥ in Damascus but did not succeed his teacher Yūsuf al-Mizzī (died 742 = 1341) in a similar position at the Ashrafiya, as the founder of the chair had made certain conditions regarding the beliefs (*madhhab*) of the professor, which he could not subscribe to.

Al-Dhahabī has the reputation of a scholar of the first rank in history and *Ḥadīth* sciences. Nevertheless his contemporaries, Abu 'l-Fidāʾ and Ibn al-Wardī, while recognising that he was a traditionist and historian of a high order, say that being struck by blindness in 743 (6th June 1342—25th May 1343) — according to others in 741 — and seeing his end approaching he compiled biographies of some of his contemporaries while they were still alive from information supplied by enthusiastic young men who gathered round him. Not being able to verify their statements himself, he has tarnished the good reputation of certain individuals, though quite unwittingly.

The following works by him have been published: 1. *Tadhkirat* (not *Ṭabaḳāt*) *al-Ḥuffāẓ*, 4 vols. Ḥaidarābād, n. d., a collection of biographies of those who knew the traditions by heart, divided into 21 classes (*Ṭabaḳāt*) of unequal length; in an appendix he gives brief biographies of some of his teachers. This work has been abridged and continued by Suyūṭī under the title *Ṭabaḳāt al-Ḥuffāẓ*, published by Wüstenfeld with the Latin title *Liber Classium Virorum qui Korani et Traditionum Cognitione excelluerunt* (Göttingen 1833). — 2. *al-Mushtabih fī Asmāʾ al-Ridjāl*, alphabetical dictionary of proper names and *Kunyas*, which appear mainly in works on Ḥadīth and might easily be confused, ed. by de Jong (Leiden 1881). — 3. *Mīzān al-Iʿtidāl fī Naḳd* (var.: *Tarādjim*) *al-Ridjāl*, alphabetical dictionary of apocryphal traditionists or those suspected of

being so, of weak authorities, etc. publ. at Lucknow in 1301 (1884) and at Cairo 1325. — 4. *Tadjrīd Asmā' al-Ṣaḥāba*, a dictionary of the companions of the Prophet (Ḥaidarābād 1315). — 5. *al-Ṭibb al-Nabawī* (var.: *Ṭibb al-Nabī*), also ascribed to Suyūṭī transl. into French by Perron with the title *La Médecine du Prophète* (Algiers 1860) and edited in Arabic on the margin of the *Tashīl al-Manāfi'* by Ibrāhīm b. 'Abd al-Raḥmān al-Azraḳ (Cairo 1308); the work is divided into three chapters: *a*) principles of medecine, *b*) medecines and foods, *c*) treatment of diseases.

Further works by him are accessible only in manuscript: 1. *a*) *Ta'rīkh al-Islām*, a great history of Islām to the year 700, divided into periods of 10 years, each of which comprises a *Ṭabaḳa* of persons in alphabethical order; a certain number of volumes of this work are to be found in various European libraries; *b*) an appendix covering the years 701—740 (Leiden 765). According to 'Abd al-Wahhāb al-Subkī, author of the *Ṭabaḳāt al-Shāfi'iya*, this would be an excellent work if it were free from a certain biass; but Kamāl al-Dīn al-Zamlakānī, who read it through volume by volume, found it a magnificent work.

Al-Dhahabī took up the same subject again and treated it in four distinct works: *a*) *al-Akhbār al-siyāsiya 'an al-Duwal al-islāmiya*, also briefly called *Ta'rīkh Duwal al-Islām* and sometimes also *al-Ta'rīkh al-ṣaghīr*, a political history of Islām till 716 with an appendix on the years 716—740; another edition of the same work completed in Dhu 'l-Ḳa'da 715 = March 1316 is called *Mukhtaṣar al-'Ibar fī Khabar man ghabar* (var.: *'abar*) or *Kitāb al-'Ibar fī Akhbār al-Bashar mimman 'abar* and also *al-Ta'rīkh al-awsaṭ*; there are MSS. in European libraries. — *b*) *Ta'rīkh al-Nubalā'* (or *Siyar al-Ashrāf*), a history of distinguished individuals. — *c*) *Tadhkirat al-Ḥuffāẓ* — *d*) *Ṭabaḳāt al-Ḳurrā'* (or *Kitāb Ma'rifat al-Ḳurrā' al-kibār 'ala 'l-Ṭabaḳāt wal-A'ṣār*), biographies of readers of the Ḳor'ān, divided into *Ṭabaḳāt*.

2. *Mukhtaṣar li-Ta'rīkh Baghdād li 'bn al-Dubaithī*, a synopsis of Ibn al-Dubaithī's history of Baghdād. — 3. *Mukhtaṣar Akhbār al-Naḥwiyīn li 'bn al-Ḳifṭī*, synopsis of Ibn al-Ḳifṭī's *History of the Grammarians*. — 4. *Tadhhīb Tahdhīb al-Kamāl fī Asmā' al-Ridjāl*, an improved edition of the *Tahdhīb al-Kamāl fī Asmā' al-Ridjāl* of Abū 'Abd Allāh Muḥammad b. Maḥmūd b. al-Ḥasan b. al-Nadjdjār Muḥibb al-Dīn al-Shāfi'ī (died 5th Sha'bān 643 = 27th December 1245), an alphabetical dictionary of the transmittors of *Ḥadīth* mainly quoted in the six collections. — 5. *al-Kāshif fī Ma'rifat Asmā' al-Ridjāl*, synopsis of the preceding; 6. *al-Mushtarik fī 'l-Kunā*, dictionary of names only used in the *kunā*. — 7. *al-Muḳtanā fī Sard al-Kunā*, dictionary of *kunā*. — 8. *Mu'djam*, a biographical collection of his masters to the number of over 1300, of which a synopsis or supplement is to be found at the end of his *Tadhkirat al-Ḥuffāẓ*. — 9. *Manẓūma fī Asmā' al-Ḥuffāẓ*. — 10. *al-Mūḳiẓa*, a treatise on the different sciences of *Ḥadīth*. — 11. *Kitāb al-'Ulūw*, a treatise on the sublimity of God. — 12. *al-Kabā'ir wa Bayān al-Maḥārim*, of deadly sins and an account of forbidden things. — 13. *al-Mughnī fi 'l-Ḍu'afā'*, of unreliable "weak" authorities on the Ḥadīth; 14. *Tashīḥ al-Khaṭṭ li Ahl al-Khamīs*, on traditionists who are supposed to be of good authority. — 15. *Risāla fī mā yudhamm wa yu'āb fī kull Ṭā'ifa*. — 16. *Mufākharat al-Mishmish wal-Tūt*, superiority of the apricot to the mulberry. — 17. *Mukhtaṣar al-Mustadrak*, extract from the *Mustadrak 'ala 'l-Ṣaḥīḥain* of Muḥammad b. 'Abd Allāh b. Muḥammad al-Ḥākim al-Nisābūrī, which is a supplement to Bukhārī's *Ṣaḥīḥ* and to that of Muslim, following the principles laid down by these authorities on the choice of Ḥadīth. — 18. *Wird* (Vollers, Cat. of the Library of the Univ. Leipzig, 252).

(MOH. BEN CHENEB.)

DHĀKĀ (DACCA) (from the *ḍhāk* tree, *Butea frondosa*), historic capital of Eastern Bengal, giving its name to a district; area, 2,781 sq.m.; pop. (1911), 2,960,402 (having increased by 12 %, during the previous decade), of whom more than three-fifths are Musalmans. It contains two older capitals, now mere ruins: Bikrampur, the traditional centre of two Hindu dynasties and still the home of many high-caste Hindus; and Sōnārgāon, the residence of Musalman governors and kings for three centuries after the conquest by 'Alā' al-Dīn in 1296 A. D. Situated at the junction of the Ganges and Brahmaputra rivers, it is a centre of the jute trade, the principal mart being Nārāyanganḍj.

Dhākā city stands on the Burhiganga, an old channel of the Ganges: pop. (1911), 108,551, having increased steadily by 54 % since 1872. It first appears in history in 1608, when Shaikh Islām Khān, governor of Bengal under Djahāngīr, moved the capital hither from Rādjmaḥal, in order to protect the frontier from raids by Arakan and Portuguese pirates, and called it Djahāngīrnagar, by which name it appears in Muhammadan chronicles. Dhākā was, in fact, a naval station, lands being granted to sailors and marines on *nawāra* or boat tenure; and boat-building remains to this day a staple industry. The most famous governors were Mīr Djumla and Shāyista Khān. The former made Dhākā the head-quarters for his unsuccessful river campaign into Assam; the latter has left his name to a well-known style of local architecture. In 1704, Murshid Ḳulī Khān transferred his

residence, and with it the seat of government, to Murshidābād, so that Dhākā only remained the capital of Bengal for a century. Local administration was then vested in a *nā'ib* or deputy, the last of whose descendants died in 1845, when the title of Nawwāb of Dhākā became extinct. The title of Nawwāb, without any territorial jurisdiction, has since been revived by the British in favour of a Muḥammadan family who originally gained their wealth by trade and are now large land owners. To one of them, Sir 'Abd al-Ghanī, is due the waterworks of the city; and to his son, Sir Aḥsan Allāh, the electric installation. The present representative, Nawwāb Sir Salīm Allāh, ranks as the leader of the Musulman community in Eastern Bengal. In 1905, on the formation of the province of Eastern Bengal and Assam, Dhākā was selected as the head-quarters of the Local Government; and it is understood that it will still be the occasional residence of the Governor of Bengal as reconstituted.

The name of Dhākā became known in Europe as early as the xvii^th cent. for its manufacture of muslins of exceptional fineness, and factories for trade were founded here by the English, Dutch, and French. The industry still survives, but not for export. More important now is the weaving and embroidering of fabrics, which are in request throughout the Muḥammadan world for turbans and other articles of apparel. Embroidery, cotton-bleaching, jewellery, gold and silver work, shell-carving are also important industries. Among three colleges may be specially mentioned the Madrasa, founded in 1874 with an endowment from the Muḥsin Fund, which has two well-attended departments — Arabic and Anglo-Persian.

The buildings of the Muḥammadan governors of Dhākā have almost all fallen to ruins, through the influence of the climate and neglect. The old port has entirely disappeared. The Lāl Bāgh, which was never completed, contains within its walls a beautiful tomb of Pari Bībī, daughter of Shāyista Khān and wife of a son of Awrangzēb. Rent for the Lāl Bāgh is still paid to a descendant of Shāyista Khān. More characteristic are the Baṛā and Čhōṭā (large and small) Kaṭrās, two massive buildings originally built for palaces but now put to base uses. The two oldest mosques bear date 1456 and 1458 A. D. Mention may also be made of the Satgumbaz mosque, built by Shāyista Khān; and of the Husainī Dālān, where the last Nawwābs lie buried, and where the Muḥarram is still celebrated with great pomp.

Bibliography: James Taylor, *Topography and Statistics of Dacca* (Calcutta, 1840); F. B. Bradley-Birt, *The Romance of an Eastern Capital* (1906); Saiyid Awlād Ḥasan, *Antiquities of Dacca* (Dacca, 1904); *Bengal District Gazetteer*, s. v. (Calcutta, 1910); *Ta'rīkh-i-Nuṣratjangī* (*Memoirs of the Asiatic Society of Bengal*, Vol. ii. N°. 6.) (Calcutta, 1908). (J. S. COTTON.)

DHĀL, the ninth letter of the usual Arabic alphabet (numerical value 700; cf. the article ABDJAD). The letter is a variant of DĀL. In Old Arabic it was pronounced as a voiced interdental or postdental spirant; now as a rule it is a voiced dental explosive (= Dāl). Cf. A. Schaade, *Sībawaihi's Lautlehre*, index. (A. SCHAADE.)

DHAMĀR (DHIMĀR, DAMAR, the דמרם of the Sabaean inscriptions), a **district** (*mikhlāf*) and **town** in **South Arabia**, to the south of Ṣan'ā. The district of Dhamār was very fertile and had rich cornfields, splendid gardens and many ancient citadels and palaces. On account of its fertility it was called the Miṣr of Yaman. The horses of Dhamār were famed throughout Yaman for their noble pedigree.

Amongst places which are mentioned as belonging to the district of Dhamār are the following: Adra'a, Balad 'Ans, Baraddūn, al-Darb, Dalān and Dhamārān (the women of these two places had the reputation of being the most beautiful in all South Arabia), Dhū Djurub, al-Talta', al-Tunan, Thamar, Rakhama (Hamdānī mentions a Rudjma), al-Sam'āniya, Samsbān, Shawkān, al-'Adjala, al-'Ashsha, al-Kaṭāiṭ, Ḳa'ra, Knubba, Mukhdara, al-Malla al-'Ulyā and al-Malla al-Suflā, Nahrān and al-Yafā'; among **Wādīs**: Banā, Khubān, Surba or Sumba (a large Wādī, with many water-mills), Shurād and Māwā; among **mountains**: Isbīl (near it on the black hill of 'Uṣiy was a hot spring called Ḥammām Sulaimān, "Sulaimān's bath", where people sought relief from leprosy) and Ṣaid (a high mountain with the citadel Samāra); among **citadels**: Bar', Hayāwa, Dathar, al-Kaba'a, 'Awadān, 'Uyāna, al-Kawna, Hirrān, Bainūn and Hakir.

Not far from Dhamār there were popularly believed to be remains of the throne of Bilḳīs (*'Arsh Bilḳīs*), consisting of several pillars near a large stream which one could only cross at the risk of his life. The explorer Niebuhr, who visited Dhamār, could find no traces of it.

The town of Dhamār used to be the **head-quarters of the Zaidiya Sect** and had a famous Madrasa attended by 500 students, from whose numbers were produced many famous scholars. Its inhabitants included many Jews and Banians. After the fall of the kingdom of the Zaidite Imāms of Ṣan'ā, it also lost its importance and now enjoys but a miserable existence.

AL-**DHAMMĪYA**, i. e. "**the Blamers**" a **Shī'ī sect** who accused Muḥammad of having claimed for himself the honour due to 'Alī, because in their opinion Muḥammad ought rather to be regarded as the messenger of the divine 'Alī. They are followers of a certain 'Ilbā (the form is not certain) b. Dhirā' al-Sadūsī, of whom nothing farther is known. In another connection the followers of Abū Hāshim (see the Art. DJUBBĀ'Ī) according to al-Baghdādī, ed. Muh. Badr, p. 160, are called Dhammīya.

DHANAB (A.), "Tail", the name of the star α in the constellation of Cygnus (Deneb), properly *Dhanab al-Dadjādja* to distinguish it from *Dhanab al-Asad* = β in the constellation of Leo.

DHAR, state in Central India, under a Marāṭhā ruler; area, 1,775 sq.m.; pop. (1901), 142,115, of whom 9 % were Musalmans. The greater part lies upon the fertile plateau of Mālwā, including the historic fortress of Māndū. The town of Dhār — pop. (1901), 17,792 — is a very ancient place, having been the capital of the Paramāra Rādjpūts, from whom the present chief claims descent. It was occupied by 'Alā' al-Dīn in 1300 A. D., and became known as Pīrān Dhār from the large number of saints buried here. In 1399, Dilāwar Khān, Ghōrī, the governor from Dihlī, founded the independent kingdom of Mālwā, the capital of which was moved to Māndū by his son. The fort, which still stands, is said to have been built in the time of Muḥammad b. Taghlaḳ (1325—1351). Two mosques are constructed out of remains of Hindu temples; one of these, built by Dilāwar Khān, is known as the Lāṭh Masdjid from an iron pillar, now broken into several pieces, which resembles the more famous iron pillar at Dihlī. An inscription on it records the visit of the emperor Akbar to Dhār in 1598. The other is popularly called "Rādjā Bhodj's School", because the floor is paved with slabs inscribed with rules of Sanskrit grammar. On the back of the Miḥrāb is a portion of a Sanskrit play, and on two pillars a curious epitome of Sanskrit inflexional terminations, cut so as to resemble a snake. Among the mausoleums are those of 'Abd Allāh Shāh Cangal, who is said to have converted the Hindu Rādjā to Islām before the Musalman conquest; and of Shaikh Kamāl al-Dīn, with an inscription in Kufic characters on a blue tile, recording its erection in 1457.

Bibliography: *Central India Gazetteer*, Vol. v. pp. 389—515; *Journal of the Bombay Branch of the Royal Asiatic Society*, xix. N°. 2, and xxi, pp. 332—354; *Archaeological Survey of India. Annual Report 1903-1904*, p. 43 sq. (Calcutta, 1906). (J. S. COTTON.)

DHARRA, a word meaning something very small such as an ant or a speck of dust, which is used by Muḥammad in the Ḳor'ān to indicate the perfection of various qualities of God. For example the perfection of his justice: "God will not wrong any one even by the weight of a *dharra*" (iv. 44, and cf. xcix, 7-8); the perfection of his knowledge: "The weight of a *dharra*, on the earth or in the heavens, would not escape your Lord" (x. 62, and cf. xxxiv. 3 and vi. 59); the greatness of his power: "call upon those whom you believe to exist besides God; they have no power in heaven nor on the earth, not even as much as the weight of a *dharra*" (xxxiv. 20).

According to Zamakhsharī's commentary on Sūra iv. 44, *dharra* is a small ant; the variant reading *namla* "ant", is actually found in this passage in stead of *dharra*; according to Ibn 'Abbās, the *dharra* is what one obtains by dipping his hand into dust and then blowing upon it.

The word "atom" best translates the term. But the word *dharra* is not used by Arab writers to express the notion of an atom in the philosophic sense; they use rather: *djuz'*, "part". On the philosophical atom see the references in the article DJAWHAR. (B. CARRA DE VAUX.)

DHARWAR, the southernmost district of the Bombay Presidency of India, lies between 14.17 — 15.50 degrees North Latitude, and 74.48 — 76 degrees East Longitude. Owing to its remote position, it remained for long free from Muḥammadan control; but after the capture of the Fort of Belgaum from Vidjayanagar by the Bahmanī King, Humāyūn Shāh, in 1472 A. D., most of Dharwar also came under the Bahmanī rulers and passed on their fall to the 'Ādil Shāhī kings of Bīdjāpūr. For a time the country passed again under Vidjayanagar, but from 1575 to the destruction of their house by the Emperor Awrangzēb in 1686 it remained under the Bīdjāpūr rulers. It was afterwards under the Niẓām of Ḥaidarābād, and then under Ḥaidar 'Alī of Mysore, and much fierce fighting took place in it between the latter and the Marāṭhās. The last and the British besieged Dharwar Fort in 1790 and captured it from Tīpū Sāhib's Governor Badr al-Zamān Khān. On the fall of the Marāṭhās the district passed under British rule in 1818. The Muḥammadans in the district number rather over 100,000 and form 12 % of the population; in Dharwar City they form nearly 25 of the inhabitants. There are a few small djāgīrdārs among them. The west of the district is hilly and wooded; the east is a treeless plain of black cotton soil.

DHAT. [See DHŪ.]

DHAW. [See DAW.]

DHAWĪ. [See DHŪ.]

DHĪ. [See DHŪ.]

AL-**DHI'ĀB** (Dhi'āb, "wolf") a South Arabian tribe. Their land lies between the territory of the Lower 'Awāliḳ [q. v.] and the Lower Wāḥidī [q. v.]. There are also considerable settlements of the Dhi'āb in the country of the Lower Wāḥidī itself, the villages of which are mostly occupied by them. The soil is unfertile and mostly prairie-like pasture land. In the east of the district is a mountain of some size, the Djebel Ḥamrā (over 4000 feet high). The chief place is the fishing village of Ḥawra (al-'Ulyā) with an important harbour.

The Dhi'āb are a very wild, warlike tribe of robbers and are therefore feared throughout South Arabia. They are Ḳabā'il (*free*, independent tribes) and are considered as genuine Ḥimyars; their slogan (*nakhwa*, 'ezwa) is: *anā dhīb* (*dhīb*) *Ḥamyar* (*Ḥimyar*) "I am the wolf of the Ḥimyars". They have no common Sulṭān, and the various branches of the tribe are ruled by Shaikhs, called Abū ("father"), whom they only heed in case of war. The most influential Shaikh of the Dhi'āb lives in 'Argha ('Orgha, 'Irgha).

Bibliography: v. Maltzan, *Reise nach Südarabien* (Braunschweig 1873), p. 224, 235—238; Comte de Landberg, *Arabica*, iv. (Leiden 1897), p. 19 *et seq.*, v. (ibid. 1898), p. 230 *et seq.* (J. SCHLEIFER.)

DHI'B, the wolf, is described as extremely malignant, quarrelsome and cunning. When a large number of wolves are together, no one separates from the flock as they do not trust one another; when one becomes weak or is wounded it is eaten by the others. When asleep they keep the right and left eye open alternately to keep a watch on one another. When a wolf is not a match for an opponent, it howls till others come

to its help; but when one becomes ill, it separates from the others, because it knows they will devour it when they see it is ill. When a wolf has designs on a flock of sheep, it howls so that the dog hears and runs in the direction of the sound; the wolf then goes to the other side, where there is no dog and carries off the sheep by seizing it behind the head and lashing it with its tail so that the sheep runs away with it. The wolf is particularly fond of making its raids just before sunrise, when shepherd and dog are both tired with watching. When a wolf runs across a man's path from the right, the man will be the victor but if it comes from the left, he is overcome by the wolf. Other wild animals like the lion and the panther only attack man when they are old and no longer able to hunt, while the wolf is always ready to attack man. It can go for a long time without food; its stomach is able to digest a bone but not a date-stone. Ḳazwīnī and Ibn al-Baiṭār mention the uses of parts of the wolf in medicine or for superstitious purposes while Damīrī gives a host of legends and stories.

DHIKR in the mind (*bil-ḳalb*) means "remembrance", and with the tongue (*bil-lisān*), "mentioning", "relating", then, as a religious technical term (pronounced *zikr*), the glorifying of Allāh with certain fixed phrases, repeated in a ritual order, either aloud or in the mind, with peculiar breathings and physical movements. When these are pronounced aloud, it is a *dhikr djalī*, when inwardly, a *dhikr khafī*. There is much dispute as to which is of the higher value. This practice is based ultimately on Ḳur'ān xxxiii. 41. "O ye who believe, remember (or glorify) Allāh with much remembering (or glorifying)". A tradition from Muḥammad is also frequently quoted: "There sits not a company remembering (or glorifying) Allāh, but the angels surround them and the (divine) mercy covers them, and Allāh Most High remembers (or glorifies) them among those who are with him." For the early development of the practice, individually and in company, of such *zikrs* see Goldziher in *Wiener Zeitschr.* xiii. pp. 35 *et seq.* When, then, the later derwish fraternities arose and their ritual became fixed, an essential part of each *ṭarīḳa* was its *zikr*. These consist of the repetition a great number of times of such phrases as *lā 'ilāha 'illa 'llāh*, *subḥāna-'llāh*, *al-ḥamdu lillāh*, *Allāhu 'akbar*, *'astaghfiru 'llāh* and the different names of Allāh. Spiritual songs, often indistinguishable from love songs, may be introduced, as also dancing and playing on different kinds of drums and pipes. At the regular Friday service (*ḥadra*) in the *takiya* or *zāwiya*, which all derwishes are expected to attend, the ritual consists especially of the formula *lā 'ilāha 'illa 'llāh*, called the *dhikr al-djalāla*, and of the *ḥizb* [q. v.], or "office" in the technical sense, of the order, which is made up of extended selections from the Ḳur'ān and of other prayers. A simpler *dhikr* is that of *awḳāt* ("hours" in the technical sense), formulae to be repeated after each regular *ṣalāt*, or at least twice daily. Another term used in this connection is *wird*, explained by Ṣūfīs as meaning "access", "arrival" (with Allāh), and applied to a short invocation, drawn up by a founder of a fraternity, the recitation of which is now a pious work. Both *ḥizb* and *wird* are otherwise used to signify portions of the Ḳur'ān or of prayer recited at particular times (Lane, *Lexicon*, sub *ḥizb* and *wird*). Each fraternity has a *dhikr*, or ritual, of its own, constructed and imposed by its founder, but these can be modified freely by the *shaikh* or *muḳaddam*. They are given under the separate fraternities. For 18 usages of the word *dhikr* which theologians have found in the Ḳur'ān, and for further description of its meaning and value with followers of the mystical path (*sālikūn*) see *Dict. of techn. terms*, i. 512 *et seq.* For descriptions of actual *zikrs* see Lane's *Modern Egyptians* by index and the present writer's *Aspects of Islam*, pp. 159 *et seq.* For an attempt to clear the *zikr* of superstitious elements, see *Kitāb al-ta'līm wal-irshād*, pp. 63 *et seq.*, the manual for derwish shaikhs and their pupils drawn up under the direction of the present Shaykh al-Bakrī.

Macdonald, *Religious Attitude and Life in Islām* (Chicago, 1909) by index under *Darwish* and *Dhikr*. (D. B. MACDONALD).

DHIMMA. According to Muslim canon law on the conquest of a non-Muslim country by Muslims, the population which does not embrace Islām and which is not enslaved is guaranteed life, liberty and, in a modified sense, property. They are, therefore, called *Ahl al-dhimma*, "People of the covenant or obligation", or simply *al-Dhimma* or *Dhimmīs* — the *dhimma* involving temporal rights from Muslims and duties towards Muslims. If, however, they have been captured in arms, they may be killed or enslaved or ransomed or exchanged or simply set free. The wives and children of combatants in any case must become slaves. But such a *dhimma* is, in strictness, open only to a "People of Scripture" (*Ahl kitāb*), thus to Jews, Christians and Sabeans, which has been interpreted to cover Zoroastrians. All others, classed roughly as *Dahrīs*, or materialists, and as idolaters, must be killed or enslaved. But practically this distinction has fallen to the ground, and Muslim states have found themselves compelled to tolerate other than People of Scripture. Each adult, male, free, sane *Dhimmī* must pay a poll-tax (*djizya* q. v.) of an amount which is fixed in the agreement. His real estate either becomes a *waḳf* for the whole body of Muslims, but of which he continues to have the use, or he holds it still as his own. In either event he pays on it and its crops a land-tax (*kharādj*, q. v.) which, in the first case, inheres in the land and must be paid even though the land comes into the possession of a Muslim; but, in the second case, on the owner's being a Muslim, falls. He is liable also to other exactions for the maintenance of the Muslim armies. He must distinguish himself from believers by dress, not riding on horseback or carrying weapons, and by a generally respectful attitude towards Muslims. He is also under certain legal disabilities with regard

to testimony in law-courts, protection under criminal law and in marriage. Of course all these points have been and are enforced with very varying degrees of rigour. On the other hand, the Muslims guarantee them security to life and property, protection in the exercise of their religion and defence against others. They may repair and even rebuild existing churches, but not erect new ones on new sites. Nor in the exercise of their worship may they use an offensive publicity. Their life, public and private, must be of a quiet, inoffensive nature. And they are not citizens of the Muslim state. Rather, each non-Muslim community governs itself under its responsible head — rabbi, bishop, etc. — who is its link of connection with the Muslim government.

II), (Chicago, 1908); Māwardī, *Aḥkām al-sulṭānīya* (Cairo, 1298), pp. 121 *et seq.*; Balādhorī, *Futūḥ* (ed. de Goeje), p. 447 *et seq.* on *kharādj*.

(D. B. MACDONALD.)

DHIRĀʿ, primarily the part of the arm from the elbow to the end of the middle finger: then the measure — a cubit. Containing six *ḳabaḍāt* (hand-breadths) the measure is called *Dhirāʿ al-ʿāmma* (the cubit of the common people, the common cubit). Containing seven it is named *Dhirāʿ al-malik*, or king's cubit, so called because the Dhirāʿ of one of the Kisrās was seven hand-breadths. Also the instrument, of wood or iron, with which the length of the dhirāʿ is measured.

Dhirāʿ again is used of the forelegs of cows, sheep and goats, i. e. the part above the *karāʿ*; and the forelegs of camels, horses, mules and asses, i. e. the part above the *waẓīf*. The brand put upon this part of the leg is also called *Dhirāʿ*, and is said to have been employed by the Banū Thaʿlaba and the Banū Mālik b. Saʿd. Lastly Dhirāʿ is the name of one of the stars in the Gemini (*al-Djawzāʾ*).

(A. S. FULTON.)

DHU (A.) with a following genitive, "lord" or "owner" e.g. *Dhu 'l-Riyāsatain* "owner of the two powers" (the sword and the pen), an epithet of al-Faḍl b. Sahl [q. v.], *Dhu 'l-Wizāratain*, lord of the two Wazirates, a title among the Arabs of Spain, *Dhu 'l-Yamīnain*, he of the two right hands, an epithet of Ṭāhir b. al-Ḥusain [q. v.]; also "the man of" to express membership, e. g. in clan names of South Arabia, cf. Kampffmeier in *Zeitschr. der Deutsch. Morgenl. Gesell.*, liv. 624; often also in the plural, *Dhawū*, *Dawī*: cf. Snouck Hurgronje, *Mekka* I., 112 *et seq.* The word is derived from the demonstrative pronoun *dhā* and along with the functions of a noun has adopted the inflexion of one: Gen. *dhī*, acc. *dhā*. The feminine is *dhāt*, which not only means the "(female) owner" or "mistress", but also has the meaning of "being" and in this meaning has given rise to new words like *dhātī*, *dhātīya* "pertaining to being". The plural in classical Arabic is *ulū*, *ulī* (besides *dhawū*, see above). A number of compounds follow.

DHU 'L-FAḲĀR (A.) the name of the famous sword, which Muḥammad obtained as booty in the battle of Badr; it previously belonged to an infidel named Munabbih b. al-Ḥadjdjādj. The name of the sword is connected with the expression *Saif Mufaḳḳar* "sword with the notch". It is mentioned in several *ḥadīths*, which have been collected, for example by Ibn Saʿd, ii. 2 (near the end; not yet printed) among the *Shamāʾil* in the section *fī Suyūf al-Nabī*. According to one of these traditions the sword bore an inscription referring to the blood-money which ended with the words *lā yuḳtal muslim bi-kāfir* "no Muslim shall be slain for an unbeliever". Its excellence was proverbial in the Ḥidjāz: there was a saying, *lā saif illā Dhu 'l-Faḳār*. These words are a very popular inscription to this day throughout the Muḥammadan world on the beautifully engraved swords of the middle ages. The sword passed from Muḥammad to ʿAlī and was afterwards in the possession of the ʿAbbāsid Caliphs. It certainly was originally two-edged like all ancient Arab swords. Later when swords with only one edge were the rule, this sword was imagined to have had two points. It frequently appears in this form as an ornament in art, cf. the reproduction on the accompanying plate.

Dhu 'l-Faḳār finally also became a man's name, which is found more particularly among Shīʿīs.

(E. MITTWOCH.)

DHU 'L-ḤIDJDJA, literally "Owner of the Pilgrimage", is the last month of the Muḥammadan year, so called because the Pilgrimage to Mecca (Ḥadjdj) and the religious ceremonies associated therewith are performed in it, occupying the seventh, eighth and tenth days of the month. In no other month can a visit to the sacred city have the merits of a pilgrimage.

(A. S. FULTON.)

DHU 'L-ḲAʿDA, "Owner of the Truce"; the eleventh month of the Muḥammadan year, so called because during that month the ancient Arabs waged no warfare, but engaged in peaceful occupations. (A. S. FULTON.)

DHU 'L-ḲADR, a Turkoman dynasty, which ruled for about a century and a half in Malaṭya and Albistān, and was founded about the middle of the xiv^{th} century. Zain al-Dīn Karadja b. Dhu 'l-Ḳadr is said to have been the first of the line; he was succeeded by his son Khalīl (780?, 782?—788 A. H.). Karadja conquered Albistān, Khalīl Marʿash, Malaṭya, Kharput and Behesnī, but the authorities disagree as to the date of these conquests; both fell in battle with the Egyptian governors of Damascus and Aleppo. Khalīl was succeeded by his brother Sūlī Beg (788—800); he defeated the Egyptians, was recognised by them as lord of Albistān and finally murdered by an emissary of Sulṭān Barḳūḳ's. His nephew, Nāṣir al-Dīn Muḥammad, son of Khalīl, lord of Sīs, took over the reins of government (800—846 A. H.); within the first period of his reign falls the expulsion of Ḳāḍī Burhān al-Dīn, ruler of Siwās, and the conquest of Malaṭya and Behesnī by Bāyazīd I; Nāṣir al-Dīn had married a daughter of Ḳāḍī Burhān al-Dīn and after the latter's death he gave his brother-in-law Zain al-ʿĀbidīn a kindly reception (ʿĀshiḳ-Pashazāde, p. 54). Tīmūrlank, whose army had been harassed by the Turkomans during the siege of Siwās, occupied Albistān and the land of the Dhu 'l-Ḳadrīya, stormed Malaṭya and Behesnī and

laid the whole country waste, whereupon the Dhu 'l-Ḳadroghlu submitted to him (Sharaf al-Dīn, ed. Petis de la Croix, v. c. 16); on his return from Syria, in the beginning of 1401, he suddenly fell upon the Dhu 'l-Ḳadr Turkomans who were leading a nomadic existence around Tadmur and drove off their herds of cattle (Sharaf al-Dīn, *op. cit.*, v. 28). After Tīmūr's withdrawal we find Nāṣir al-Dīn in alliance with Sulṭān Meḥemmed Čelebi who had married one of his daughters (Leuncl. *Hist.*, 412); his son Sulaimān Beg in 815 A. H. accompanied Meḥemmed Čelebi on his campaign against the latter's brother Mūsā Čelebi (Sa'd al-Dīn, i. 264; Leuncl., *Hist.*, 452 *et seq.*). At a later period we find him involved in a struggle with the Karamanoghlu and the Ramaḍanoghlu; Sulṭān al-Mu'aiyad supported him and granted him Ḳaiṣarīya in 882 A. H.; Murād IV. afterwards conquered this town and handed it over to the Dhu 'l-Ḳadroghlu. Nāṣir al-Dīn died in 846 after reigning over 44 years. Bertrandon de la Broquière, who journeyed through Asia Minor in 1432, found Turkomans of the Dhu 'l-Ḳadroghlu at Ḥamā, (p. 102) and in another passage, (p. 119) he mentions that this prince had at his disposal "30,000 hommes d'armes Turquemans".

Nāṣir al-Dīn was succeeded by his son Sulaimān Beg (846—858), who had been Beg of Malaṭya during his father's reign. In 853 (1449) he gave his daughter Sitti Khātūn to Meḥemmed, afterwards the third Sulṭān of that name (Sa'd al-Dīn, i. 398 *et seq.*; Dukas, 224). As Dukas tells us, Sulṭān Murād II. wished this alliance in order to have an ally in the prince of Dhu 'l-Ḳadr against the Karamanoghlu and the Ḳara Yūsuf.

His successor was his son Malik Arslān (858—870 A. H.). In his reign Uzun Ḥasan seized Kharpūt; he was murdered in 870, at the instigation of his brother Shāhbudaḳ by a Fidā'ī in Mar'ash.

After his death his brother Shāhbudaḳ was installed by the Mamlūk Sulṭān Ḳā'it Bāi while Sulṭān Meḥemmed II. granted another son of Sulaimān Beg, Shāhsuwār, dominion over the tribes of Dhu 'l-Ḳadr and Bozoḳlï. Shāhbudaḳ fled to Egypt in 877 and left the throne to Shāhsuwār who was finally taken by the Egyptians in 877 and executed. Shāhbudaḳ did not however long enjoy his power; another brother 'Alā' al-Dawla, supported by Sulṭān Meḥemmed II. rose against him in 884 (Sa'd al-Dīn, i. 570 *et seq.* and ii. 163) and drove him out of his kingdom; Shāhbudaḳ was imprisoned by the Egyptians whom 'Alā' al-Dawla had been able to win to their side, and when in 895 he tried with the help of Bāyazīd II. to regain the throne from 'Alā' al-Dawla, he was defeated by him, handed over to the Egyptians and executed by them. Henceforth 'Alā' al-Dawla remained at peace with the Ottomans; his daughter 'Ā'isha Khātūn was the wife of Bāyazīd II. (Tashköprüzāde Kamāl, i. 60) to whom she bore the future Sulṭān Selīm I. in 1467 A. D. On the other hand he came in conflict with Shāh Ismā'īl of Tabrīz, whom he had refused the hand of his daughter Beglu Khātūn; he had also taken the town of Diyārbakr after the fall of the Aḳ-ḳoyunlu. In 913 (1507) Shāh Ismā'īl attacked 'Alā' al-Dawla in his own dominions, inflicted a severe defeat on him and deprived him of Diyārbakr and Kharpūt (Sa'd al-Dīn, ii. 130; Leuncl., *Hist.*, 652 *et seq.*; v. Hammer, *Gesch. des Osm. Reiches*, ii. 345); one of his sons and two grandsons fell into the hands of the Persians and were put to death by them.

Selīm I finally destroyed the power of 'Alā' al-Dawla. On his return from the Persian campaign in 921 (1515), Khādim Sinān Pasha was sent on a punitive expedition against the Dhu 'l-Ḳadr chief, who was thought to have taken up a hostile attitude to the Ottomans; on the 29th Rabī' II = 12th June a battle was fought between Sinān Pasha and the aged Turkoman 'Alā' al-Dawla, (he is said to have 90 years of age); his head and those of his four sons and thirty Turkoman princes were sent to the Sulṭān as trophies of victory (Farīdūn, i. 362; Sa'd al-Dīn, ii. 293—297; v. Hammer, *Gesch. des Osm. Reiches*, ii. 425 *et seq.*). 'Alībeg son of Shāhsuwār and grandson of Sulaimānbeg was granted the throne of the Dhu 'l-Ḳadr in place of 'Alā' al-Dawla; he had in his time fled before 'Alā' al-Dawla to Bāyazīd II. and distinguished himself in Selīm's campaign against Shāh Ismā'īl. He afterwards accompanied Selīm I. on his Egyptian expedition and in the reign of Sulaimān I suppressed the rebellion of Djanbardī Ghazālī. He was then misrepresented to the Sulṭān by Farhād Pasha; Farhād Pasha entrusted with the task of chastising him invited him to meet him in his camp at Ortuḳābād and had him and his four sons put to death, (year 928; cf. Leuncl., *Hist.*, 759 *et seq.*); the land of the Dhu 'l-Ḳadrīya was made a Beglerbeylik. Two grandsons of 'Alā' al-Dawla, 'Alībeg and Meḥemmed Khān, sons of Shāhrukh, who had escaped to Shāh Ismā'īl, afterwards came to Sulaimān I. and received governorships from him; Meḥemmed Khān died in 977 in Rumelia (on him, cf. Ewliyā, *Travels*, i. 1, 86 = i. 170 of the Oriental edition). 'Abd al-Razzāḳ Beg, a brother of 'Alā' al-Dawla, was brought a prisoner with his two sons to Constantinople in 1515, but his fate is unknown.

Under Ottoman suzerainty the Dhu 'l-Ḳadroghlu enjoyed the privileges of a mediatised ruling house (e. g. in the *Curialia*; cf. Ewliyā, *loc. cit.*) and appear in the xviith century with the Ḳizilaḥmedli of Sinope and the Khāns of the Krim among the "famiglie del Regio sangue" (Sagredo, *Memorie Istoriche*, p. 1068 of the Venetian edition of 1677).

The name Dhu 'l-Ḳadr — Dukas writes Τουργατίρης (224; cf. Surgadiroli in Bertrandon de la Broquière, Durcadurli in Sagredo); Chalkokondyles and the *Historia Politica* confuse Dhu 'l-Ḳadr with the Turgud Turkomans of Tasheli (Cilicia) and sometimes write Τουργούτης for Dhu 'l-Ḳadr, and sometimes Τουρκατυρλίδες for Turgudlu — has remained attached to the Turkoman tribes of Mar'ash; the former Eyālet Dhu 'l-Ḳadrīya comprised the Sandjāḳs of Mar'ash, Malaṭya, 'Aintāb, Kars-Dhu 'l-Ḳadrīya and Sumeisāṭ ('Ain 'Alī, *Ḳawānīn risālesi*, p. 22), with 2169 fiefs (*tīmār* and *ziāmet*), which turned out 5500 men ('Ain 'Alī, *loc. cit.* 50). The Eyālet was also known by the name of land of 'Alā' al-Dawla.

Reiches*, i. 175—179 (based mainly on the *Nukhbet al-Tawārīkh* in the more complete as yet unprinted edition); Ch. Schefer, preface to Bertrandon de la Broquière, *Voyage*, p. lix. *et seq.* (following Munedjdjimbāshi).

Dhu 'l-Faḳār.

Representation of 'Alī with the sword Dhu 'l-Faḳār on a mirror in the possession of Prof. M. Sobernheim, Berlin.

ZAIN AL-DĪN ḲARADJA (+ 780).

1. Khalīl 780—788.
2. Sūlibeg 788—800. (Son, fights with Nāṣir al-Dīn Meḥemmed: ʿĀlī, *Künh*).
3. Ibrāhīm (*a.* 788 Lord of Kharpūt: ʿĀlī, *Künh*; *a.* 819 sent to Meḥemmed I.: Feridūn, i. 157).
4. ʿĪsā
5. ʿOthmān (about 788: ʿĀlī, *Künh*).

Nāṣir al-Dīn Meḥemmed, married a daughter of Ḳāḍī Burhān al-Dīn of Siwās. 788 Lord of Siwās; reg. 800—846.
2. Ḥamza + 840 H. (Sidjill-i ʿOthmānī).

1. Suleimānbeg 846—858.
2. فياض + after 840 (Sidjill-i ʿOthmānī).
3. daughter, married Meḥemmed I.

1. Malik Arslān 858—870.
2. Shāhbudaḳ 870—872; 877—884; + after 895. — Shāhkobād (889 taken prisoner and blinded by ʿAlā' al-Dawla: ʿĀlī).
3. Shāhsuwār 872—877. — ʿAlī Beg 921—928. — 1. Sarī Arslān, 2. Dīwāne Weled (*a.* 928 executed with two other brothers: ʿĀlī).
4. ʿAlā' al-Dawla 884—921.
5. ʿAbd al-Razzāḳ (921 banished to Constantinople).
6. Sittī Khātūn, married Meḥemmed II. (853).

1. Shāhrokh (Lord of Kirshehri *a.* 905: Saʿd al-Dīn, ii. 63 and 105).
2. Suleimānbeg (Lord of Bozokli; *a.* slain by ʿAlībeg 920: Saʿd al-Dīn, ii. 287).
3. ʿĀ'ishe Khātūn (married Bāyazīd II. before 1467).
4. Beglukhātūn (sought as wife by Shāh Ismāʿīl).

1. Meḥemmed Khān (+ about 977).
2. ʿAlībeg (about 940; + in Pāsin). — Karakhān (ʿĀlī, *Fuṣūl* etc., fol. 102). — Djaʿfar Beg. (Sandjāḳbeg of Čorum, about 1000 H. in Kaisarīye, ʿĀlī, *Fuṣūl* etc. fol. 102).

Note: A place cannot be found for the Dhu 'l-Ḳadr Oghlu Ḥasanbeg, who is mentioned about 830 H. in the history of Yürgeč Pasha (cf. v. Hammer, *op. cit.*, i. 426 *et seq.*) in Leuncl., *Hist.*, 538 and ʿAshiḳpashazāde (p. 82). — That the Shāhsuwār Pasha, + 997 H., so often mentioned in Hungarian history, was descended from the Dhu 'l-Ḳadr Oghlu, has been assumed by v. Hammer, *op. cit.*, ii. 673 without good reason. (J. H. MORDTMANN.)

DHU ḲĀR, the name of a stream in the land of the tribe of Bakr b. Wā'il [q. v., p. 604] between Wāsiṭ and Kūfa. A battle bears its name which was fought between this Arab tribe and the Persians in which the latter were defeated. It is one of the best known and most celebrated of the *Aiyām al-ʿArab* [q. v., p. 218]. Tradition varies as to the date of the battle. According to some it took place on the day the Prophet was born, according to most authorities however it was not fought till after the battle of Badr [q. v., p. 559] and Muḥammad is related to have said of it "the day was the first day the Arabs had won their rights from the Persians and through me they have been victorious". In many accounts two battles of Dhū Ḳār are distinguished. The battle is sometimes also called after other places near Dhū Ḳār, at which there was also fighting. — The old accounts of the *Yawm Dhī Ḳār* gradually became much elaborated with new material — just as happened with the accounts of the battles between the Bakr and the Taghlib. Thus arose the popular romance of the *Kitāb Ḥarb Banī Shaibān maʿa Kisrā Anūshirwān*, (printed, Bombay, 1305).

Bibliography: Ṭabarī, *Annales*, i. 1015-1016; 1028—1037; Ibn ʿAbd Rabbihi, *al-ʿIḳd al-farīd* (Būlāḳ 1302), iii. 115—119; al-Bakrī, *Geogr. Wörterb.*, ed. by Ferd. Wüstenfeld (Göttingen 1877), ii. 723-724; Maidānī, *Madjmaʿ al-Amthāl* (Cairo 1284), ii. 325 — cf. G. W. Freytag, *Arabum Proverbia* (Bonn 1843), iii. 557 —; Yāḳūt (ed. Wüstenfeld), iv. 10—12; Mittwoch, *Proelia Arabum Paganorum*..... (Diss. Berlin 1899), p. 8. (E. MITTWOCH.)

DHU 'L-ḲARNAIN, the "two-horned", a name always given to the individuals cited below, more particularly to the third. The two horns go back to an old mythological idea. Naram-Sin was for example represented as Adad with 2 horns (on the stele of Susa; cf. *Fouilles à Suse*, i. pl. x.). The two horns of Jupiter Ammon are well known. In Arabic, the name Dhu 'l-Ḳarnain, the true meaning of which was not known to the Arabs

and which they therefore interpreted in the most varied and often quite ridiculous fashion, is borne by the following persons:

1. al-Mundhir al-Akbar b. Mā' al-Samā', the grandfather of al-Nu'mān b. al-Mundhir. He is said to have worn two long curled locks on his forehead and therefore to have received the name Dhu 'l-Karnain. According to Ibn Duraid's explanation he is the Dhu 'l-Karnain who is referred to in verse lx. 3 of Imru'a 'l-Kais (Ahlwardt, *Six Dīwans*, p. ١٥٨)

ayadda masāhaa dhi 'l-Karnaini hatta
tawalla 'āridu 'l-maliki 'l-humāmi

Winckler sees a thunder-god in this Dhu 'l-Karnain.

2. The South Arabian king Tubba' al-Akran or Dhu 'l-Karnain. According to the South Arabian interpretation he is the Dhu 'l-Karnain mentioned in the Korān (cf. under 3).

3. Alexander the Great is by far the most frequently referred to as Dhu 'l-Karnain. He is mentioned by this name even in the Korān (Sūra, xviii. 82 *et seq.*), after the original in the Syriac legend which arose in the viith century A. D., in which Alexander says to God: "I know that thou hast caused horns to grow upon my head, so that I may crush the kingdoms of the world with them". The Syriac legend is, as Nöldeke has shown, the source of the "Two-Horned" in the Korān. For the details of this story and the accounts of Alexander the Great in the rest of Arabic literature see the article ISKANDAR. Among the explanations which the Arabs give of the name Dhu 'l-Karnain as applied to Alexander, I may mention the following: Alexander had two hornlike fleshy growths on his forehead; he had two beautiful locks (*karn* = *dhu'āba*, see above) on his forehead; he was of noble descent on his father's as well as his mother's side; two generations (*karn*) passed away during his lifetime; he was endowed with knowledge of the outer and inner world; he penetrated into the regions of light and of darkness.

4. 'Alī b. Abī Tālib more rarely bears the name Dhu 'l-Karnain.

4. *Kāmūs* s. v. *krn*. (E. MITTWOCH.)

DHU 'L-KIFL is an individual mentioned in the Korān 21, 85, 38, 48, in connection with a series of prophets, whose identity is wrapped in uncertainty. The Muslim commentators have only a very hazy conception of him and hesitatingly identify him with various people, chiefly Biblical personages like Joshua, Elijah, Zachariah, or Ezekiel. Dhu 'l-Kifl is a name of the prophet just as four other prophets have two names (Ya'kūb: Isrā'īl; Yūnus: Dhu 'l-Nūn; 'Isā: al-Masīḥ; Muhammad: Aḥmad). The view is more definitely advanced (Ṭabarī, *Annales*, i. 364, Mudjīr al-Dīn, *al-Uns al-Djalīl*, p. 68), that Dhu 'l-Kifl is an epithet of Bishr (according to some, e. g. *Tādj al-'Arūs*: Bashīr), a son of Aiyūb, whom God chose as a prophet to convert a heathen people (or King Kin'ān) in Shām, where he spent his whole life and died at the age of 75. Ibn Iyās's story that the sons of Aiyūb waged war against the heathen king Lām b. Da'ām to whom they declined to give their sister in marriage and that Bishr was taken prisoner, stands quite alone. As his brothers declined to ransom him, the king threw him upon a funeral pyre; but the angel of God protected him from a fiery death in the same way as Abraham had been protected from the fire with which he was threatened by Nimrod. Lām thereupon became converted with all his people. The accepted collections of Hadīths make not the slightest mention of Dhu 'l-Kifl, a proof that Hadīth criticism places no value on the manifold legends about this individual. The Kuṣṣāṣ have therefore been all the more industrious in finding motives for the name of this figure, which is quite colourless in tradition, by etymological inventions, all of which are connected with various meanings of the word *Kifl* and the verbal stem *kfl*. First with the meaning "pledge" or "security" of the word *Kifl*; Dhu 'l-Kifl is said to have pledged himself to the Prophet Elisha (whose cousin, *ibn 'Amm*, he was according to some — Baiḍāwī —), to whom he proposed himself as successor as leader of the people of Israel, to fulfil three conditions: to fast by day, to spend the night in pious devotions and never to fall into a passion. In spite of the temptations of Satan he fulfilled these conditions. In the legends of Bashīr he gives the heathen king Kin'ān a written guarantee that the king will attain Paradise if he becomes converted or to be a guarantee for the payment of the ransom to Lām. Other legends are connected with the meaning of *Kifl* as "double". Dhu 'l-Kifl enjoyed a double measure of God's rewards because he had done a double share of pious works. The name is connected with *Takaffala* in the meaning of "to attend to the maintenance of anyone", in a legend according to which its bearer maintained 70 (or 100) Israelites (or prophets) who were persecuted by a cruel king; in this story A. Geiger (*Was hat Moh. aus dem Judent. aufgenommen?* 2nd ed. Leipzig 1902, p. 192) has rightly recognised an echo of the story of Obadiah (I. Kings, 18, 4). *Kifl* is also the name of a garment (connected with the meaning of "doubled"), a cloak of double thickness: the prophet wore a garment of this kind which it has been sought to connect with II Kings, ii. 8 (Elijah, *waypiglōm*) (*Ein Muhammedanischer Katechismus*, by Meḥmed Mes'ūd, ed. by F. C. Andreas, Potsdam 1910).

Besides this Dhu 'l-Kifl a different saint of the same name is mentioned (Ibn al-Athīr, *Muraṣṣa'*, ed. C. F. Seybold, p. 190, l. 4 from the foot, *et seq.*), whose legend is however connected by Tha'labī with the prophet Dhu 'l-Kifl. This Dhu 'l-Kifl was originally a sinful man, who took advantage of the indigent position of a certain virtuous woman to tempt her to sin, but was restrained from actually sinning by her apparent compliance and converted to a virtuous life. He therefore was doubly (*kifl*) rewarded by God on the principle that a converted sinner is of more value in the eyes of God than

a pious man who never sins (*al-Ṭā'iʿ ʿind Allāh aḥsan min al-ʿĀbid*; cf. Bab. Talmūd, Berākhōth, 34b; Matthew, xviii. 3; Luke, xv. 7); a type which often appears again with the latter moral application in edifying tales of the East (e.g. the Jewish of Nathān De-Ṣūsīthā, the Muḥammadan of Dā'ūd al-Anṭākī, *Tazyīn al-Aswāḳ bi-Tafṣīl Ashwāḳ al-ʿUshshāḳ* [lith. Cairo 1279 H.], p. 354; in part also in *Sindban*, ed. Baethgen, in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, lxv. 287). It is clear from the stories quoted here that the Muslims are not at all agreed on the character of Dhu 'l-Kifl: whether he was a prophet or merely a pious servant of God (*ʿAbd ṣāliḥ*). The champions of the first view rely solely on the circumstance that Dhu 'l-Kifl has received a place in Sūra xxi (*Sūrat al-Anbiyā'*).

Muslim local tradition has located tombs and holy places of Dhu 'l-Kifl at various places in Muḥammadan territory from Palestine to Balkh. See the references to these places in R. Basset, *Nédromah et les Traras* (Paris 1901) and my notes in the *Revue de l'Histoire des Relig.*, xlv. (1902), p. 219. To two of these places in particular the memory of Dhu 'l-Kifl is more seriously attached by Muḥammadan tradition. One, the erstwhile association of which has now, according to Clermont Ganneau's account (*Archaeological Researches in Palestine*, ii. 308), been quite forgotten, is a *Ḳubba* of *Nebi Kafl* in Kafil Ḥāris (from Kafr Ḥ.; the name is also used in the earlier form in Mudjīr al-Dīn, *al-Uns al-Djalīl*, p. 68, 7 and *Tādj al-ʿArūs*, viii. 99, 15) near Nablus, in the district of which the graves of many prophets are located (cf. *Zeitschr. d. Deutsch. Pal.-Ver.*, ii. 15). In this case the identification of Dhu 'l-Kifl with Bishr, the son of Aiyūb (see above) was proposed; the Samaritans ascribe it to Kālēb, the companion of Joshua, son of Nūn. Of greater importance down to recent times was the tomb of Dhu 'l-Kifl in Kafil (Massignon prefers the pronunciation Kifil) formerly Bēt (Bīr) Mallāḥa, on the left bank of the Hindīya Canal, south of Ḥille in Mesopotamia (in the Wilāyet of Baghdād, Liwā: Kerbelā; Ḳaḍā: al-Hindīya) in which districts the tombs of many saints were located and honoured, without a doubt first by the Jews, (Yāḳūt, ii. 594). One of the latter certainly is the grave of Ezekiel which has been a highly revered object of pilgrimage from ancient times. On its importance among the Jews, see the sources quoted in the *Jewish Encyclopedia*, v. 316, among which the account of the Regensburg traveller Petachjah (xiith century) also gives an interesting account of the reverence paid to the tomb by Muslims (*Tour du Monde ou Voyages du Rabbin Pétachya de Ratisbonne* .... par. E. Carmoly, Paris 1831, p. 45 *et seq.*). With the readiness with which the Muslims always adopted the tombs of saints of other creeds (see *Revue de l'Histoire des Relig.*, *loc. cit.*, p. 214) they have also taken this sacred place of Judaism within the sphere of their reverence and connected it with the mysterious Dhu 'l-Kifl. This has also brought about a change in the original place name. During the reign of Uldjaitu Khudābenda (700 = 1300) the fanatic *Naḳīb al-Ashrāf* Tādj al-Dīn Abu 'l-Faḍl made an attempt to forbid the Jews access to the sanctuary founded by them and proclaimed it from the chancery as a place accessible to Muslims alone. This proclamation gave the vizier Rashīd al-Dīn an excuse to overthrow this rival and bring about his execution (Quatremère, *Histoire des Mongols de la Perse*, Paris 1836, p. xxiv *et seq.*)

Orients*, ed. by H. Grothe, vii. 53-54 (where a photograph of the Chefil is given). — Illustrations of the tomb from various periods: The earliest is in Uri b. Simeon of Biel's (1563), *Yichūs hā-Ābōth* (Venice 1659) from a drawing by an unknown artist made in 1536 (the tomb is here located on the bank of the Tigris); this view is reproduced by Joh. Henr. Hottinger in *Cippi Hebraici* (Heidelberg 1662) on p. 83 and E. Carmoly, *Itinéraires de la Terre Sainte* (Bruxelles 1847), p. 459; Loftus, *Travels and Residence in Chaldaea and Susiana* (London 1857, reproduced in the *Jewish Encyclop.*, v. 315); most recent is Ismāʿīl Ḥaḳḳī Bey Bābān Zāde, *De Stamboul à Bagdad*, in the *Revue du Monde Musulm.*, (1911) xiv. 253, 257.

(I. GOLDZIHER.)

DHU 'L-NŪN, ABU 'L-FAIḌ B. IBRĀHĪM AL-MIṢRĪ, one of the most celebrated ascetics of early Ṣūfism was a native of Akhmīm, born of Nubian parents; his real name was Thawbān but he is usually called Dhu 'l-Nūn the Egyptian. He lived in Egypt and died at Djīza (Ghizeh) in 245 = 860. He is numbered among the "Polestars" (*Ḳuṭb*) and the "*Ayārūn*, i. e. "hidden saints" (cf. Bāyazīd al-Bisṭāmī); his name is followed by the invocation: "may God sanctify his hidden state". Cf. this formula in the title of one of the articles of Book II. of the *Mathnawī* of Rūmī. He is said to have lived unknown and his great sanctity was only revealed at his death. On the night of his death sixty-nine people dreamed that they heard Muḥammad say: "I have just met Dhu 'l-Nūn the friend of God". It is evident however that this lack of recognition signifies only that his sanctity was disputed and not that he lived in obscurity for we find from the lives of the Ṣūfīs that he had disciples in his lifetime; his biographers say also that he had great influence over the people of Egypt, so much so that the envious called him a *zindīḳ* and denounced him to the Caliph Mutawakkil. The latter sum-

moned him to Baghdād and at first threw him into prison, but afterwards, impressed by his patience and overcome by his eloquence, sent him back in honour to Egypt. This incident shows the suspicion which Ṣūfism aroused in its early days. According to the *Nafaḥāt al-Uns* Dhu 'l-Nūn was the first Shaikh who openly professed the Ṣūfī doctrine.

In Book II of the *Mathnawī* of Djalāl al-Dīn Rūmī occurs a long passage referring to these suspicions or to the astonishment aroused by the doctrine of Dhu 'l-Nūn; his friends considered him a madman and had him confined. "When power is in the hands of the dissolute, says the poet, Dhu 'l-Nūn is necessarily in prison". In this passage the ascetic is the symbol of spiritual knowledge despised by the vulgar who do not understand it.

Many sayings are ascribed to Dhu 'l-Nūn, for example the following: "The man of knowledge (*ʿārif*) becomes more humble every day because he approaches each moment nearer his Lord".

"Mystic knowledge (*maʿrifa*) is the communication which God makes of his spiritual light to the depths of our hearts".

The surname Dhu 'l-Nūn which signifies „the man with the fish" is applied to the prophet Jonah in Ḳorʾān, xxi, 87.

Wilson, London, 1910), ii. 121—128; cf. also works dealing with the history of Ṣūfism, like the *Nefaḥāt* of Djāmī, and the Memorial of Saints (*Tadhkira-i awliyā*) of Ferīd al-Dīn ʿAṭṭār.

(B. CARRA DE VAUX.)

DHU 'L-NŪN. The BANŪ DHI 'L-NŪN were an influential Berber family of the Huwāra tribe, who migrated into Spain at quite an early period where, during the rebellions against Muḥammad I. (238—273 = 852—886) and ʿAbdallāh (275—300 = 888—912) Amīrs of Córdoba, they played a part as leaders of a robber band of rebels, northeast of Toledo in Shantaberiya (Santaver on the Guadiela), Webdha (Huete) and Uḳlīsh (Uclés). After the fall of the Caliphate of Córdoba in the first quarter of the xi[th] century the first independent king of Toledo of the new dynasty, Yaʿīsh b. Muḥammad b. Yaʿīsh was overthrown in 427 (1035-1036) by Ismāʿīl al-Ẓāfir b. ʿAbd al-Raḥmān b. ʿĀmir b. Muṭarrif b. Dhi 'l-Nūn, who reigned till 429 (1037). He was succeeded by his son Yaḥyā al-Maʾmūn (429—467 = 1037—1074) the greatest figure in the dynasty, who enjoyed a long reign and made temporary conquests on all sides from the centre of Spain; he was succeeded by his weak grandson Yaḥyā al-Ḳādir b. Ismāʿīl b. Yaḥyā who only reigned at Toledo from 467—478 (1074—1085) in which latter year he won the kingdom of Valencia from the feeble hands of the last ʿĀmirid, with the help of Alfonso VI. of Castile to whom he had lost Toledo, and ruled his new kingdom till his death in 1092 when it became a republic under Ibn Djaḥḥāf (1092—1094). The splendour, extravagance and luxury of the Banū Dhi 'l-Nūn became proverbial: *Iʿdhār dhunnūnī* "a Dhunnūnian feast" (like a Lucullan banquet).

Bibliography: Dozy, *Histoire des Musulmans d'Espagne*, ii. 260; iv. 5, 302; A. Vives, *Monedas de las Dinastías Arábigo-Españolas*, p. 170—179 (the chronology differs somewhat from that adopted by Dozy); Maḳḳarī, *Nafḥ al-Ṭīb* i. 288; ii. 672 *et seq.*, 748.

(C. F. SEYBOLD.)

DHU 'L-NŪN BEG ARGHŪN was the founder of the Arghūn dynasty [q. v.] of Sind. He was at first Governor of Ghōr and Sīstān under Ḥusain Baiḳarā of Herāt, and made himself practically independent at Ḳandahār. He began to extend his power southwards into Sind with the assistance of his son Shāh Bēg. He was killed in 913 (1507) in a battle against Shaibānī near Herāt. [See the art. AFGHĀNISTĀN, pp. 166-167.]

(M. LONGWORTH DAMES.)

DHU 'L-RUMMA, an Arab poet of the tribe of Banū ʿAdī. His proper name was Ghailān b. Uḳba b. Masʿūd (or Buhaish). His mother was called Ẓabya and belonged to the Banū Asad. He was a contemporary of Djarīr and Farazdaḳ and in the feud between these two poets took the side of al-Farazdaḳ but without in any way distinguishing himself. He also wrote satires on the tribe of Imruʾ al-Ḳais, who found a champion in the poet Hishām. As the latter could only write *radjaz* verses, with which he could not hold his own against the more elaborate metres of Dhu 'l-Rumma, al-Farazdaḳ had to come to his aid but afterwards went over to Dhu 'l-Rumma's side. The latter also became a panegyrist of Bilāl b. Abī Barda, grandson of Abū Mūsā 'l-Ashʿarī. The latter had, as every one knows, played a by no means honourable part at Adhruḥ but this did not of course hinder our poet from representing Abū Mūsā's conduct at Adhruḥ as a credit to his descendants. Dhu 'l-Rumma's love-poems were at first dedicated to a Beduin named Maiya; Dhu 'l-Rumma and Maiya are one of the celebrated pairs of lovers among the Arabs. Afterwards when she harshly rejected him, by her husband's orders, it is said, he turned his attention to a certain Kharḳāʾ but died soon afterwards —, according to one authority, of small pox. The year of his death is uncertain. Ibn Khallikān says 117 (735-736); elsewhere 101 (719-720) is given. The *Kitāb al-Aghānī* says in one passage: "he died in the Caliphate of ʿAbd al-Malik". This could not be later than 86 (705). But as the Bilāl who has been mentioned as Dhu 'l-Rumma's patron, as we know from Ṭabarī, only became chief of police in Baṣra in 109, Ḳāḍī in 111, and deputy-governor in 118 (which office he held till 120), this early date for the poet's death is obviously wrong. Probably in the *Kitāb al-Aghānī* we ought to read Hishām b. ʿAbd al-Malik instead of simply ʿAbd al-Malik as has actually to be done in another passage. If this suggestion is correct there only remains the date 117 which would quite suit Dhu 'l-Rumma's relations with Bilāl. All authorities are agreed that he died in the prime of life ("40 years of age") and was buried in the desert not far from Baṣra.

This story of his burial in the desert is perhaps a myth; but it certainly is entirely in keeping with the character of the poet. Dhu 'l-Rumma was a thorough Beduin: in appearance, habits and ideals and by no means least in his style of poetry. According to Arab critics his great strength lay in his mastery of simile. Ḥammād al-Rāwiya regards him as equal to Imruʾ al-Ḳais in this respect. He was particularly skilled in describing

"sand, noonday heat, desert, water, camel-lice and snakes" (Ibn Ḳutaiba); and his descriptions of nature are always described as very remarkable. Abū 'Amr says he was the last *Shi'r* (i. e. Ḳaṣīdas) poet, as Ru'ba had been the last of the Radjaz poets. But he lacked the power to write effective panegyrics and biting satires. This was doubly disadvantageous to him. At one time the Arab literati denied him the rank of a classic (*faḥl*); indeed they were on the whole inclined to deny him the credit of being a poet of genius (*mufliḳ*) (Aṣma'ī's verdict); but then — and this was probably still more unpleasant for him — throughout his life he was poor, although he was a notorious sponger and "often came among the country people as well as to Kūfa and Baṣra to take part in wedding feasts" (*Aghānī*). To complete this sketch of his character we must add that he plagiarised the works of his predecessors and even of his contemporaries in the most shameless fashion. Ru'ba in particular bitterly complained of him in this respect; he is even said to have simply appropriated whole poems by his brothers. On the other hand it is right to point out that al-Farazdaḳ stole certain verses from Dhu 'l-Rumma, because "he was more worthy to have written them", and that the Arabs of this period were, if possible, even more lax in their regard for the ownership of literary products than at the present day.

On the whole Dhu 'l-Rumma was less a poet than a clever maker of verse and a compiler. That he was not a born poet, he himself acknowledged, according to the Arab authorities. We are also told that he was able to write; he is actually said to have concealed the fact because it was considered a disgrace among the Beduins (or perhaps rather among the poets of the old school?). He had further a considerable knowledge of the ancient poetry and lexicography, as he showed on more than one occasion. He used to settle the genuineness or falsity of poems, the meaning of rare words, etc. As an authority on the vocabulary of the Beduins he plays an important part in the Arab lexicographers. Yāḳūt likewise frequently quotes him in his geographic dictionary on account of the many place-names which occur in his poems.

(A. SCHAADE.)

DHU 'L-SHARĀ, an ancient Arab deity. According to the Arab tradition he was a god who owned a reserved grazing-ground (*ḥimā*) among the Dawsites (Wüstenfeld, *Genealogische Tabellen*, 10, 20) with a hollow into which the water trickled down from the rocks, which is in agreement with the fact that the name 'Abd Dhu 'l-Sharā is found in this tribe. According to al-Kalbī (Wüstenfeld, 10, 14) also, this deity was worshipped among the related Banū 'l-Ḥārith; cf. also Lane, s. v., according to whom the site of his cult was al-Sarāt. We meet with Dhu 'l-Sharā (Dusares) on more historical ground as the chief god of the Nabataeans, in whose inscriptions from Petra, the land east of Jordan and as far as al-Ḥidjr he is often mentioned. His chief sanctuary was in Petra where a large black, quadrangular unhewn stone was dedicated to him in a splendid temple. He had another important sanctuary in Soada which was called Dionysias after him. His festival was celebrated here in August which is certainly connected with the fact that he was identified with Dionysos as the god of fertility, particularly of the vintage. In Petra and Elusa, on the other hand, his festival, according to Epiphanius, fell on the 25th day of December on which day "the virgin called Χααβου in Arabic and Dusares born of her (τοῦτ' ἔστιν μονογενῆ τοῦ δεσπότου) were worshipped with Arabic hymns". How much reliance is to be placed on this statement is however uncertain, even the meaning of the word Χααβου being doubtful. It naturally reminds one of the Arabic *ka'āb*, "a young maiden with breasts developed"; but it is also possible to connect it with *ka'b* "cube" (cf. the Ka'ba in Mecca) according to which interpretation the god was thought to have been born from the stone.

As the compound form shows, Dhu 'l-Sharā is not a real name but an epithet of a god, whose actual name and original character is still unknown to us on account of the meagreness of our sources. That he was the sun-god, worshipped by the Nabataeans (Strabo, xvi, 4, 26), is only a possibility. He certainly only acquired his Dionysian character in a civilised land, in which connection it is important to note that so early a writer as Herodotos (iii. 8) identifies the Arab god Orotal with Dionysos. One may even ask whether the god who bore this epithet was everywhere the same. The answer to this question depends on the meaning of the epithet and at this point so many possible solutions offer themselves that it is scarcely possible to come to a definite conclusion. The lexicographers give the following meanings for Sharā': district, road or mountain. As they give as an example of the first meaning Sharā' (Ashrā') 'l-Ḥaram, "the neighbourhood of a sanctuary", the name might be interpreted as: owner of such a district, which could of course, be applied to various gods. The word appears also, however, as a place-name with or without the article (cf. Steph. Byzant, 237, 22: Δουσάρη, σκόπελος καὶ κορυφὴ ὑψηλοτάτη Ἀραβίας, and according to the geographers was applied amongst other places to a hill in the land of the Ṭā'ites and a place near Mecca, where according to the *Dīwān* of the Hudhailites (ed. Wellhausen, 276, 22), water was to be had and gazelles to be found. A place called Sharā is also frequently mentioned where many lions were to be met with (e. g. *Kāmil*, ed. Wright, 33, 12; 54, 3; 56, 4). The place near Mecca could most readily be identified as the Dawsite Dhu 'l-Sharā' (cf. *Bibl. Geogr. Arab.*, vii, 316). It is on the other hand more natural to connect the god of the Nabataeans with the district of al-Sharā(t) which practically coincides with the ancient Edom although, in spite of the equation proposed by Lagarde, it is still somewhat risky to identify Sharā and Sharāt

without very careful consideration. Finally Eduard Meyer's suggestion must be mentioned, that the feminine deity Shrt, who appears in an inscription of Boṣrā, has been evolved from Sharā, which was originally a place or a fetish (just as in older times the wife of Abraham, Sarai-Sara); he also thinks it possible that the word Sharā as the name of places, where the deity was worshipped, might be derived from the name Dhu 'l-Sharā.

DHUBĀB, flies, gnats, etc. There are numerous kinds; they are produced in putrescent substances, particularly the dung of animals. They have no eyelids on account of the smallness of their eyes but in compensation they have two hands with which they may constantly be seen washing their eyes. They also have a proboscis, which they stretch out when they want to lick blood and withdraw when they have sucked it all up. They hum and buzz like a reed which is blown into. They are unable to run as they have no joints like ants and lice; the soles of their feet are rough so that they cannot hang on to smooth things. Flies wage war on midges therefore the latter do not come out by day; they only come out when the flies have gone to rest. If flies did not drive away the midges, it would be intolerable to live in houses. When an animal is wounded, the flies fall upon it and bring about its death unless it is able to keep the wound clean by licking it. The flies deposit their excrement in the wound and worms come out of it; it is of two colours like that of birds and looks black on a white ground and vice versa. There are different kinds according to the different animals. They are only found in large numbers near putrescent matter; they like the heat of the sun and also increase by copulation. Flies are also produced in beans and only the husks are left when they fly out. Their uses in medecine are numerous and are detailed by Ḳazwīnī, Damīrī and Ibn al-Baiṭār.

DHUBYĀN was the son of Baghīḍ b. Raith b. Ghaṭafān b. Sa'd b. Ḳais 'Ailān. He was the brother of 'Abs and Anmār, and the father of Fazāra, Sa'd and Ḥārithat al-Baḳ'ā'. The pasture grounds of the tribe of Dhubyān lay to the east of Madīna where they dwelt along with the rest of the descendants of Ghaṭafān, between the Ḥidjāz and Adjā and Salmā, the mountains of the Banū Ṭaiy, from whom Dhubyān was separated by the Wādī 'l-Rakba. The two main branches of Ghaṭafān were Ashdja' and Baghīḍ, the principal centre of the latter tribes being Sharabba and Rabadha, some 130 Arabian miles east-by-north from Madīna. For the suggested etymologies of the name see the *Lisān al-'Arab* (*sub voce*).

History: The tribes of Dhubyān come upon the scene in connection with the famous war of the Horse-race. When Ḳais b. Zuhair became chief of 'Abs, Dhubyān obeyed Ḥudhaifa b. Badr of Fazāra, who was the most important person in the whole of Ghaṭafān. It was a quarrel between these two that gave rise to the war of Dāḥis and Ghabrā' between the two brother tribes which lasted for forty years. The war was complicated by the simultaneous breaking out of a feud between the tribes of Tamīm and 'Āmir b. Ṣa'ṣa'a (see art. ḲAIS). 'Abs becoming guests of the latter tribe, Dhubyān cast in their lot with Tamīm, together with Asad who were in alliance with Dhubyān, and Ḍabba and the Ribāb who were connected with Tamīm. These allies were routed on the day of Djabala which Caussin de Perceval dates 579 A. D. 'Abs next quarrelled with their hosts the Banū 'Āmir and wished to return once more into the Ghaṭafān country. Through the good offices of Ḥārith b. 'Awf and Ḥārim (or Khāridja) b. Sinān peace was restored, and Sharabba became the chief seat of 'Abs (cf. the *Mu'allaḳa* of Zuhair).

After the conclusion of the war between Dhubyān and 'Abs a feud broke out between the now reunited Ghaṭafān and Khaṣafa. Of Ghaṭafān, Ashdja', 'Abdallāh b. Ghaṭafān, 'Abs and Dhubyān took part, and of Khaṣafa, the Banū Djusham, Banū Naṣr, Banū 'Āmir (branches of Hawāzin) and the Banū Sulaim, brother tribe to Hawāzin. After lasting for half-a-dozen years the feud came gradually to an end when the power of Muḥammad began to make itself felt (see art. GHAṬAFĀN).

In the eighth year of the Hidjra Muḥammad invited Dhubyān to accept Islām. They killed his messenger, but Ḥārith b. 'Awf (cf. above) paid the bloodwit, and the tribe some time after professed the new faith. In the apostasy which followed the death of Muḥammad, Fazāra and other branches of Dhubyān fell away under their chief 'Uyaina b. Ḥiṣn. In the subsequent attack of the Bedawī tribes upon Madīna all Ghaṭafān except Ashdja' took part. They gathered at Abraḳ in the district of Rabadha which belonged to Dhubyān. Their attack failed and they were in turn driven back by Abū Bakr, and on the return of Usāma from Syria, finally dislodged, Rabadha being attached to the territory of Muslims. They fell back upon Ṭulaiḥa, who in turn retired to Buzākha, Ghaṭafān following. In the battle which ensued Ghaṭafān, and especially Fazāra, bore the brunt of the fighting; but they were completely defeated by Khālid b. al-Walīd. Ghaṭafān submitted once more to Islām, and, except for certain proscribed persons who had killed the Muslims of the tribe, were pardoned. 'Uyaina was pardoned also by Abū Bakr. Dhubyān is mentioned as taking part in the battle of Mardj Rāhiṭ in the year 65 A. H. between the supporters of Marwān the Umaiyad and those of Ibn Zubair (Ṭabarī, ii. 485). Doughty mentions a small tribe called Dhubyān (Zubbian) dwelling in al-Ḥidjr.

ḌIBĀB, an Arab tribe, belonging to the Maʿaddite group. They were the descendants of Muʿāwiya b. Kilāb, who was called al-Ḍibāb because of three of his sons (Ḍibāb, Ḍabb and Muḍibb). Their genealogy is: Muʿāwiya b. Kilāb b. Rabīʿa b. ʿAmr b. Ṣaʿṣaʿa b. Muʿāwiya b. Bakr b. Hawāzin.

They dwelled in the district of Ḥima Ḍariya in the Nadjd territory.

The following settlements of the Ḍibāb are mentioned: Djazʿ Banī Kūz, Dāra Djuldjul and Ṭulūḥ; mountains: Akhzam, al-Djawshaniya, Dhāt Ārām, al-Yahmūm (a large black hill), Kabsha (with Dāra al-Kabasht), al-Khanzara (a large mountain with Dāra Khanzara), Numaira Baidān, Shuʿabā (a large mountain, one day's journey in length) and Zuhlūl (a black hill with ore deposits), etc.

The following were Wādīs of the Ḍibāb: Dhu 'l-Djadāʾir, al-Raiyān (in common with the Djaʿfar b. Kilāb), Hadb Ghawl, Ḳādim and Turaba (a large W. with palmgroves and cornfields, in common with the Hilāl and ʿĀmir b. Rabīʿa); watering-places: Arṭā, al-Aswara, al-Baradān (near Dāra Djuldjul), Buthān, Thuraiyā, al-Djifār, al-Ghadīr, Ḳurāḳira, al-Khiṣāfa, al-Shubairima, Ṣufaiya, Maʿrūf and Manīy, etc.

(J. SCHLEIFER.)

DĪBĀDJ, a variegated silk cloth (satin). Dībādj is an Arabicised form of the Persian *dīvā* or *dībā*, which means a coloured cloth in which warp and woof are both made of silk (*abrīshum*, Arabic *ibrīsam*). *Dībādj* probably first entered Arabic through the Aramaic; in any case the word was known by Muḥammad's time, for it appears in a poem by Ḥassān b. Thābit (*Kitāb al-Aghānī*, iv. 17, 1 according to Fraenkel, *Aram. Fremdwörter*, p. 41). The derivation from *dīwbaf* = *nisādjat al-djinn* = "cloth of the spirits" (*Tādj al-ʿArūs*) is of course a popular etymology.

In spite of the interdiction of the wearing of silk, dībādj was frequently used in the East in the middle ages as a material for masculine dress. It was especially used for robes of honour. At the Fāṭimid court in Cairo there was a separate *dār al-dībādj* (Maḳrīzī, *Khiṭaṭ*, i. 464; cf. Karabacek, *Die Pers. Nadelmalerei Susandschird*, p. 84), in which this material was supposed to be manufactured but was probably only made up. The fabric itself as well as the name came from Sāsānian Persia; the frequent description of dībādj as Khusrawānī is probably not merely a picturesque epithet but a direct reference to its origin. Dībādj was certainly a highly prized article of commerce, on which the *Kitāb al-Ishāra fī Maḥāsin al-Tidjāra* of Abu 'l-Faḍl Djaʿfar b. ʿAlī al-Dimashḳī (Cairo 1318), p. 25, says: "There are several kinds of Dībādj, some of which are used for clothing and some for hanging up and spreading out [as carpets]. The best quality is that which is beautifully dyed, the designs (pattern) on which are neatly arranged, the silk fine and the web thick, the colour shining, the weight heavy, and which has remained free from traces of fire during the process of smoothing (*fī djandaratihi*, probably a finishing process). The poorest quality is that which possesses the opposite qualities. The quality used for cutting out for clothes should measure 120, that for spreading out and hanging up 200 spans (*shibr*) the piece (*thawb*). It may however be more or less; but if it is not sufficient to make a garment, it is a most serious fault, for it cannot be cut up and it is difficult to find a use for it. Even when one finds a similar piece, it is hardly possible to obtain permission to cut a piece out of it to make up the necessary amount". Numerous pieces of silk preserved in our museums may be claimed to be dībādj.

On account of its beautiful appearance and its popularity the name *dībādj* or *dībādja* has been transferred to all sorts of other things; for example the preface to a poem or book is called *dībādja* on account of its florid style; the same name is given to the grain of a wood or of a stone. (Idrīsī's glossary); for other meanings see the dictionaries. In certain connections *dībādj* and the words connected with it have come to mean beautiful, brilliant, elegant. *Dībādj al-Ḳurʾān* is a name used by Ibn Masʿūd for Sūras xl—xlvi, the so-called *ḥawāmīm*, which take their name from the mystic letters حم which introduce them.

(C. H. BECKER.)

DĪBĀN, now more correctly pronounced DHIBĀN (Yāḳūt, ii. 717: Dhibyān; Khalīl al-Ẓāhirī, ed. Ravaisse, p. 120, 9: Dībyān; Ibn Faḍlallāh al-ʿUmarī, *Taʿrīf* (Cairo 1312), p. 194, 15: Dībādj), an ancient site in Moab, the Dībōn of the Old Testament, on the Roman road, which is however known to have been used as late as the Mamlūk period, between Ḥusbān and al-Rabba, became famous in 1868 as a result of the discovery there of the inscription of King Mēshaʿ (the Moabite Stone). — Cf. A. Musil, *Arabia Petraea*, i. 376 *et seq.*

DIʿBIL (as a noun means "an old she-camel"), the pen-name of a famous Arab poet of the ʿAbbāsid period. His real name, according to the *Kitāb al-Aghānī* was Muḥammad while other authorities say it was al-Ḥasan or ʿAbd al-Raḥmān. His *kunya* was Abū ʿAlī or Abū Djaʿfar. His ancestor Razīn was a client of ʿAbd Allāh b. Khalaf the Khuzāʿī who was secretary to the Caliph ʿOmar b. al-Khaṭṭāb.

Diʿbil was born in 148 (765); his birthplace is unknown. His family was settled in Baghdād but originally belonged to Kūfa, though some say to Karkīsiya (Circesia). The poet certainly spent his youth in Kūfa. As the result of an unfortunate escapade he had to remain in concealment for a considerable period and wandered about the country in the company of all sorts of rogues and vagabonds. He then appears to have settled in Baghdād. Here he made the acquaintance of the poet Muslim b. al-Walīd who introduced him to poetry. By a fortunate chance he came to the court of Hārūn al-Rashīd.

The following facts are definitely known regarding Di'bil's further career at the courts of Hārūn and al-Amīn. He was first for a period prefect of the town of Simindjān in Ṭukhāristān, a nāḥiya (district) of Khurāsān. As his immediate superiors, Yāḳūt (*Mu'djam*, s. v. Simindjān) mentions two persons: al-'Abbās b. Dja'far and Muḥammad b. al-Ash'ath. Probably these two individuals are in reality only one, viz., the al-'Abbās b. Dja'far b.(?) Muḥammad b. al-Ash'ath, mentioned by Ṭabarī (iii. 609 and 612). This man (apparently a member of the same clan as Di'bil) was governor of Khurāsān from 173—175 (789—792) in the reign of Hārūn al-Rashīd. The period of Di'bil's prefecture should most likely be placed in the same period. — Shortly before 200 (815-816) he made the pilgrimage and proceeded to Egypt to his fellow-tribesman al-Muṭṭalib b. 'Abd Allāh, who was governor there from 198 to Ramaḍān 200 (813—April-May 816). He wrote panegyrics on him and was handsomely rewarded and appointed prefect of Uswān (Assouan). But he lost the favour of his benefactor and was soon dismissed because of lampoons on him (which probably however were composed at an earlier period).

Soon afterwards he appears to have been again in the 'Irāḳ. For when al-Ma'mūn's uncle the singer and aesthete Ibrāhīm b. al-Mahdī was chosen Caliph during the absence of the Caliph in Khurāsān by members and clients of the family of 'Abbās in Baghdād (25th Dhu 'l-Ḥidjdja 201 = 14th July 817), Di'bil wrote bitter lampoons on him and the 'Abbāsids in general: "If Ibrāhīm is strong enough to bear the burden of the Caliphate, then Mukhāriḳ, Zulzul and Māriḳ (three professional singers) are qualified to succeed him". "How is it possible — it surely cannot be — that one profligate should inherit the Caliphate from another". Ibrāhīm was naturally enraged at being classed with "strolling people" and when he had again submitted to his nephew al-Ma'mūn and obtained the latter's pardon, he demanded that Di'bil should be punished in the severest fashion. But the Caliph, as can easily be understood, took such a thorough if malicious delight in these verses that he forgave the poet everything that he had said against himself and his family, even a verse in which he prided himself on belonging to the same tribe as his brother's executioner (Ma'mūn's general Ṭāhir b. al-Ḥusain, the conqueror of Baghdād).

This story is by no means improbable. But the rising of the Baghdād 'Abbāsids and the proclamation of Ibrāhīm had its origin in the fact that during his sojourn in Khurāsān al-Ma'mūn had appointed the eighth Shī'ite Imām 'Alī b. Mūsā 'l-Riḍā [see 'ALĪ AL-RIḌĀ] as his successor. Di'bil was a thorough going Shī'ite throughout his life. He wrote panegyrics on 'Alī al-Riḍā and was rewarded by him with a robe, which he preserved as a relic. He is also said to have received from him 10,000 dirhems which the Imām had ordered to be struck in his own name (*Aghānī*, xviii. 42 *et seq.*). Ma'mūn's possibly only feigned friendship to the 'Alids may have induced Di'bil to make his peace with this ruler. In any case in the period following he wrote several panegyrics on the 'Abbāsids. 'Abd Allāh b. Ṭāhir is said to have recited one of them to the Caliph.

Di'bil maintained himself in the Caliph's favour for a considerable period, possibly the latter saw in him a useful tool. Nor was he injured by the enmity of Ibrāhīm b. al-Mahdī, who was again reconciled to the Caliph, nor of the Mu'tazilite Ḳāḍī Aḥmad b. Abī Du'ād, while the Caliph simply took a delight in Di'bil's biting lampoons on his secretary 'Abū 'Abbād. But 'Alī al-Riḍā died at the end of Ṣafar 203 (Aug.-Sept. 817) and on the 29th Dhu 'l-Ḳa'da 207 (15th April 823) the 'Alid national flag of green was replaced by the black of the 'Abbāsids. This is the latest date then (207 = 823) at which Di'bil can have returned to his hostile attitude to the 'Abbāsids. To this date or possibly a little later may be placed a poem in which Di'bil describes Hārūn al-Rashīd as the worst of men and the 'Abbāsids as a whole as even more unworthy of the throne than the Umaiyads.

Shortly before this breach of friendly relations with the 'Abbāsid court another feud had begun, which was to occupy the attention of a great part of Baghdād society for years if not for decades: Di'bil's quarrel with the poet Abū Sa'd al-Makhzūmī. The latter lauded the North Arabians (Nizārites) and poured scorn upon the South Arabians (Ḳaḥṭānites), while Di'bil was the reverse. While Abū Sa'd for long exercised a certain moderation in his lampoons and at the same time could not break away from the forms of the old Beduin *ḳaṣīda*, Di'bil assailed him with the vilest abuse and expressed it in the language of the gutter. It thus came about that only scholars cared for Abū Sa'd's poems, while on the other hand his opponent's verses were sung by the youth of Baghdād as street-ballads to which Di'bil himself contributed his share. This feud lasted into the reign of al-Ma'mūn's successor, al-Mu'taṣim; for a poem by Abū Sa'd has survived in which he endeavours in the last verse to draw this Caliph into the feud against Di'bil.

Al-Mu'taṣim himself, the eighth 'Abbāsid Caliph, received a severe chastisement from Di'bil on his accession and on his death the poet is said to have exclaimed "a Caliph has died whom no one laments and another has succeeded whom no one rejoices in". The Vizier Muḥammad b. 'Abd al-Malik al-Zaiyāt on this occasion wrote an elegy on al-Mu'taṣim. Di'bil thereupon replied with an incredibly unmeasured lampoon in which he called after the late Caliph: "Go to Hell and torment; I have never regarded thee as anything else than a devil". Al-Mutawakkil, finally, the last Caliph whom he survived, was accused by him in a lampoon of pederasty. The viziers and other officials of the Caliph naturally did not come off any better than their masters.

Di'bil's end befitted his attitude throughout his life. He was barbarously punished for a lampoon on the North Arabians by the then prefect of Baṣra, al-Isḥāḳ b. al-'Abbās. After his release he fled to al-Ahwāz and is there said to have been treacherously murdered in the village of al-Ṭīb in 246 (860-861) at the instigation of a certain Mālik b. Ṭawḳ, whom he had irritated by a particularly cruel lampoon. The details of this story of his murder appear highly suspicious. It may more reasonably be presumed that he died as a result of the ill-treatment he had received in Baṣra; he was then 98 (Muḥammadan) years of age.

It is striking evidence of the importance attached to Di'bil's poems that the above men-

tioned prefect of Baṣra commissioned a North Arabian poet, Abu 'l-Dalfā' to reply to the lampoons of Di'bil and Ibn Abī 'Uyaina in a poem which he published under the title of *al-Kaṣīda al-Dāmigha*, the "crushing Kaṣīda". — That Di'bil's fellow-tribesmen, the Banū Khuzā'a, were proud of their poetical champion is only natural.

If we critically examine Di'bil's poems we can only credit a few with any high poetic merit. Only a few isolated pieces have a noble theme (e. g. his farewell to Muslim b. al-Walīd and the lament on his cousin: *Aghānī*, xviii, 47 and 54); some are pleasant little trifles (we may particularly mention the "Locus-poem" in Ibn Kutaiba, *Kitāb al-Shi'r*, ed. de Goeje, p. 541; it might well be in the *Mudjūn* of Abū Nuwās); the great majority are venomous pamphlets and scurrilous songs that were sung in the streets. These are nevertheless particularly interesting to us on account of the wealth of historical references which frequently afford a fairly safe clue to the dating of the poem in which they occur (which is by no means usual in Arabic poems), and contribute all sorts of little details to our knowledge of the historical personages mentioned in them. We need hardly point out that one must not believe every thing that Di'bil says about his victims. Cf. also the article AL-KUMAIT.

Di'bil's *Dīwān* unfortunately does not appear to have survived in its entirety. Presumably his too great popularity — which in this case means popularity with the mob — has prevented serious philologists from exhaustively studying this poet.

DIDJLA (without the article) is the Arabic form of the name of the Tigris, called (I)DIGNAT-(I)DIGLAT in Babylonian, חִדֶּקֶל in Hebrew and ܕܩܠܬ in Syriac.

According to the Arab geographers the Tigris rises north of Maiyāfāriḳīn (= Tigranokerta) at Holūris, a place celebrated in history on account of the massacre of 'Alī the Armenian there in 249 (863) (see Tomaschek, *Sasun*, p. 23), out of a dark cavern beneath the Ḥiṣn Dhi 'l-Ḳarnain. It is the grotto at the source that is here referred to (according to Belck in the *Verhandlungen der Berl. Ges. für Anthropologie*, 1900, p. 459), the subterranean course of the Tigris nearly a mile in length, near Ilidja (Holūris = Illyrisis = Elegerda = Ilidja: see Lehmann-Haupt, *op. cit.* p. 523, Herzfeld in *Memnon*, i. 133), at the entrance to which rise the remains of a "Chaldaean" citadel, to the neighbourhood of which the name of Dhu 'l-Ḳarnain is still attached. (See Lehmann-Haupt, i. 439).

Ibn Serapion, Muḳaddasī, and Yāḳūt are our chief authorities on the upper course of the Tigris and its tributaries and have left us a wealth of statements which do not however entirely agree and cannot always be verified. Yāḳūt seems to have used the best sources. He mentions a Nahr al-Kilāb "Dog River" as the first tributary, which is probably identical with the Nahr al-Dhi'b "Wolf River" of Muḳaddasī. As he describes it as coming from the district of Shimshāṭ (see Iṣṭakhrī, p. 75; Ghazarian, *Armenien unter Arab. Herrschaft*, p. 72; Huntington in the *Verhandlungen der Berl. Ges. für Anthrop.*, 1900, p. 149), it seems clear that he is referring to the Arghana-Su. Next come below Diyār Bakr [q. v.] the Wādī Ṣalb (= al-Rams of Muḳaddasī? — probably the modern Ambar-Čai), the Wādī Sātīdamā (certainly the Batman-Su, perhaps al-Maṣūliyāt of Muḳaddasī; cf. Marquart, *Ērānšahr*, p. 141 *et seq.*, 161), and next the Wādī 'l-Sarbaṭ (called Nahr al-Dhi'b by Ibn Serapion), the river of Arzan [q. v., p. 472]. At the bend in the Tigris at Tell Fāfān (the modern Till, the Tila of the Assyrians; see Lehmann-Haupt, i. 337 *et seq.*) the Wādī 'l-Zarm, also called the Bohtān-Su or Eastern Tigris, a considerable stream, which has been augmented by the waters of the Bidlis-Čai, (cf. M. Hartmann, *Bohtān*, p. 65 *et seq.*), joins its western sister-river from Diyār Bakr.

The name of the next tributary, which Yāḳūt writes Nahr Yarnā, should according to Andreas in M. Hartmann, *Bohtān*, p. 131, be read Nahr Baznā which would be derived from the name of the Bashnawī tribe of Kurds. To what modern stream it corresponds is as uncertain as in the case of the Nahr Bā'ināthā, which is next mentioned (thereon cf. M. Hartmann, *op. cit.*, p. 31 and 136 *et seq.*). The identification of the latter with Ibn Serapion's Bāsānfā (*J. R. A. S.* 1895, p. 262, 263 *et seq.*) is not certain, especially as this author's account contains obvious errors. The identification of Bāsānfā with the western tributary called Saffān by Mas'ūdī, *Tanbīh*, p. 54, 10 (cf. Ṣāfān Dere in von Oppenheim, ii. 158) is on the other hand more probable as is that of the two names with the Sapphe of Ptolemy etc. (but cf. M. Hartmann, p. 101, note 1; and also p. 99 *et seq.*, 133). Yāḳūt's next tributary, al-Būyār, is quite uncertain while the name Wādī Dūsha has clearly survived in the present Nahr Dūsh, Nerdūsh etc. (M. Hartmann, *op. cit.*, p. 65 and 146).

The Arab geographers have not very much to tell us about the Khābūr al-Ḥasanīya which rises in al-Zawazān, joins the Tigris north of Faishābūr and forms the southern boundary of Bohtān; mention may be made however of the world-famous Ḳanṭarat Sindja which, according to Muḳaddasī (p. 139 and 147), led across the river of al-Ḥasanīya (= Zākhō?) (cf. M. Hartmann, *op. cit.*, p. 39, 70 *et seq.*; on the modern bridge cf. Miss G. L. Bell, *Amurath*, p. 287 and 289 and illustration 181; Preusser, *Nordmesop. Baudenkmäler*, p. 22 *et seq.*). After a brief reference, without giving it a name, to the Abū Marya, the stream which flows into the Tigris from the west at Beled = Eski-Mosul (cf. von Oppenheim, ii. 159 and 165), Yāḳūt proceeds without further mention in this passage of al-Mawṣil [q. v.] at once to the al-Zāb al-A'ẓam, the Upper Zāb, which, rising in the district of Mushanghar and flowing through the Haftōn country past Zargūn and Bābaghīsh (cf. Hoffmann, *Auszüge aus Syrischen Akten Persischer Märtyrer*, p. 227 *et seq.*, 233 *et seq.*), discharges its waters into the Tigris above the now vanished al-Ḥadītha.

The town of al-Sinn (see Herzfeld in *Memnon*, i. 232), at the confluence with the Little or Lower Zāb (cf. Hoffmann, *op. cit.*, p. 254 *et seq.*) which rises in the district of Shahrazūr, likewise no longer finds a place on our maps.

Augmented by the waters of the latter, the Tigris at the modern al-Fatḥa finally breaks through the Djebel Ḥamrīn (earlier Bārimmā, q. v., p. 660) which has so long been constraining its course to the right. The al-Tharthār which branched off from the Nahr al-Hirmās which rises at Naṣībīn is said to have reached the Tigris via al-Ḥaḍr [q. v.] above Takrīt (cf. Herzfeld in *Memnon*, i. 218 *et seq.*). By Yāḳūt's time this watercourse which now disappears in the steppe was no longer perennial; and it is at least doubtful if the channel which formerly connected the Euphrates and the Tigris ever was, as Yāḳūt, i. 921 says, actually navigable.

The great canal system of Babylonia practically begins at al-Mu'taṣim's capital Sāmarrā [q. v.]. A vast network of channels breaks away from the Euphrates and the Tigris, bearing the waters of the Euphrates to the Tigris in the upper part and those of the Tigris to the Euphrates in the lower part. This canal system which dates from the remotest antiquity, has been subjected to great alterations in course of time not only by the movements or neglect of the dwellers on its banks but also by the working of the waters themselves. Streck in his *Die alte Landschaft Babylonien* has fully discussed the problems, many of which can never be completely solved, mainly on a basis of Ibn Serapion's account. It is on his results that the following brief survey of the picture given us by the Arab geographers is based.

Not far below Takrīt the Nahr al-Isḥāḳī branched off to the west from the Tigris and, after irrigating the district of Ṭīrhān, again joined the main stream below Sāmarrā. Immediately below the point of junction on the same side of the main river the important Nahr Dudjail, watering the district of the same name, left the Tigris; the waters of the Euphrates canal of the same name appear to have mingled with it before it returned to the main stream south of 'Ukbara, which then flowed farther west in the riverbed now called Shuṭaiṭ (cf. Streck, *op. cit.*, p. 24, 33, 220 *et seq.*, 226 *et seq.*). The alteration in the course of the Tigris, traces of which we find as early as the x[th] century, appears by al-Mustanṣir's time (1226—1242 A. D.) to have come to a definite conclusion; it impedes a proper understanding of the ancient accounts in a most unusual fashion (but cf. also Herzfeld in *Memnon*, i. 134 *et seq.*). Not far from the beginning of the river Isḥāḳ, at Dūr, the Tigris sent out eastwards the Kaṭūl-Tāmarrā-Nahrawān canal which ran for a considerable distance parallel to the Tigris, receiving the waters of the al-Adhaim and the Diyāla [q. v.] from the mountains on the east till it returned to the river at Djardjarāya, or perhaps not till Mādharāya (see Streck *op. cit.*, p. 298, 300 and 310 *et seq.*).

In the interval the Tigris received on the west bank four large canals from the Euphrates, the Nahr 'Īsā (the modern Nahr Ṣaḳlāwīya) below Baghdād, the Nahr Ṣarṣar (Abū Gharaib) above al-Madā'in, the Nahr al-Malik (Radwānīya, see also Herzfeld in *Memnon*, i. 134) below this town and lastly the Nahr Kūthā (Nahr Ibrāhīm) which ends ten miles below al-Madā'in. Here also the exact location of these canals is rendered difficult by the alteration in the course of the Tigris, the bed of which has been shifting westwards since 1000—1200 A. D. (see Streck, *op. cit.*, p. 292).

While Ibn Serapion regards the channel now known as the Hindīya canal as the main bed of the Euphrates, the Nahr Sūrā (corresponding to a portion of the present main stream), bears, according to him, the name al-Ṣarāt al-Kabīra as far as the town of al-Nīl, where it takes the name of Nahr al-Nīl (cf. the modern Shaṭṭ al-Nīl) and finally flows into the Tigris as the Nahr Sābus (= Lower Zāb Canal: cf. Streck, p. 314) at the village of this name, via al-Nu'māniya, where it is connected with the Tigris by the Upper Zāb Canal (cf. de Goeje in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxxix, 8). With the Nahr Sābus we reach the Shaṭṭ al-Ḥai, which was regarded by the mediaeval Arabs as the Tigris proper, while the modern Tigris, which separates from it at Mādharāya (approximately Kūt al-'Amāra) was then of no particular importance. The Tigris of the Arabs, after passing through Wāsiṭ (on the site of the latter cf. H. Wagner in the *Göttinger Nachrichten*, *Phil. Hist. Kl.*, 1902, p. 271 *et seq.*) and sending off a series of canals, fell at al-Kaṭr into the swamps of al-Baṭā'iḥ [q. v., p. 675 *et seq.*], the various lakes of which were connected by channels navigable by small boats and finally poured their waters into the Nahr Abi 'l-Asad. The latter joined the Didjla al-'Awrā, the "Blind" Tigris (see Streck, p. 41; and Herzfeld in *Memnon*, i. 135), which apparently corresponded to the present lower course of the Tigris. According to Ibn Rusta, p. 94, at one time ships from the sea used to sail up the latter and reached the Tigris of the Arabs above Wāsiṭ at Khaizurānīya — possibly by the Fam al-Ṣilḥ Canal (= Apamea on the Sellas? — Fam, a popular abbreviation of Fāmiya near Wāsiṭ cf. Yāḳūt's account iii. 847 [see Herzfeld in *Memnon*, i. 140], combined with the passage from Stephanus cited by Herzfeld, *ibid.*, p. 136 [?]) — till breaches in the embankments made further advance impossible by this route and only the western channel through the swamps remained.

In the final part of its course the river now known as Didjla al-'Awrā (= Shaṭṭ al-'Arab) again sent off innumerable channels; of the nine main canals on the west bank only two may be mentioned here, as connecting al-Baṣra with the river, the Nahr Ma'ḳil and Nahr al-Obolla; the most important on the east side was the Nahr Bayān, which formed a navigable connection of the lower Tigris with the Dudjail al-Ahwāz, now called the Kārūn. 'Abbadān [q. v., p. 7], where beacons guided ships by night, was the town at its mouth; by the xiv[th] century it appears to have quite lost its importance as a seaport owing to the advance of the coast-line.

The preceding survey of the course of the Tigris, according to the accounts of the mediaeval Arab geographers, naturally only gives the main outlines. Reference has several times been made to the undoubted alterations in the course of the bed of the river and to their supposed date. No absolute certainty is possible regarding the details of these changes. It is an open question at what date the Tigris sent its main stream east-

wards after reaching Kūt al-ʿAmāra. Streck, *op. cit.*, p. 312, believes that the beginning of this movement should be placed at the close of the ʿAbbāsid Caliphate. We are equally poorly acquainted with the details of the growth of the Delta of Shaṭṭ al-ʿArab, before the mouth of which at Fāo a mud bank renders navigation difficult.

That the river was of great importance from the earliest times as a trade-route as well as an irrigator of the Babylonian plains, is evident. Traffic is still maintained on the river below Diyār Bakr by the same peculiar rafts supported by inflated hides that we find reproduced in the Assyrian friezes. English and, since Midḥat Pasha's time, Turkish steamers also ply between Baghdād and Baṣra which since the xiiith (?) century has come to be directly on the Shaṭṭ al-ʿArab and forms the limit of the sea traffic. The restoration of the ancient irrigation system, which is now utterly ruined has often been proposed in the last century and, thanks to Willcocks' untiring activity, has now passed beyond the preparatory stages; but the execution of his colossal scheme seems to be faced by almost insuperable difficulties.

(R. HARTMANN.)

DIH (P.), a village (Old Pers. *dahyu*). Dihḳān, Arabicized form of the Persian *dih-gān* "head of a village, a member of the rural nobility". According to Masʿūdī the dihḳāns were divided into five classes, distinguished from one another by their dress (*Murūdj*, ii. 241); the Arabs used to seek their advice on agricultural matters (*ibid.*, v. 337). In the *Shāh-Nāmah*, Firdawsī represents them as depositories of oral tradition regarding the deeds of the ancient kings of Persia (ed. Mohl, viii. *et seq.*). M. C. Inostrancev's Sassanian studies (*Sasanidskie Etiudi*) have shown that there were other sources than the dihḳāns for the preservation of the Iranian epic (illustrated rolls which were studied in the castle of Djiss near Arradjān in Fārs). These landed proprietors acted as municipal authorities and were responsible for the payment of the land-tax. Even at the present day, in Turkestan, farmers are called *dihḳān* (*Revue du Monde Musulman*, xiii. 1911, p. 568).

(CL. HUART.)

DIHḲĀN is a name used for the settled Persian-speaking population in Balōčistān and Southern Afghānistān. Another form of the name is Dēhwār, both names meaning "Villagers". They are related to the Tādjīks and Sarts, and form part of the old stationary Iranian population dwelling in permanent homes as distinguished from the nomadic races.

(M. LONGWORTH DAMES.)

AL-**DIHLAWĪ**, NŪR AL-ḤAḲḲ B. ʿABD AL-ḤAḲḲ, was a pupil and disciple of his father *q. v.*, p. 39. He passed his early days in Dihlī as a religious teacher but his literary fame and piety induced the Emperor Shāh-Djahān to honour him with the responsible post of Ḳāḍī in Akbarābād. He died in Dihlī at an advanced age of ninety, A. H. 1073, A. D. 1662.

(M. HIDAYET HOSAIN.)

AL-**DIHLAWĪ**, WALĪ ALLĀH, whose real name was ḲUṬB AL-DĪN AḤMAD B. ʿABD AL-RAḤĪM, was the most celebrated traditionist and theologian of his time in India. From his autobiography, entitled *al-Djuzʾ al-laṭīf fī tardjamat al-ʿabd al-ḍaʿīf*, we learn that he was born in 1114 A. H. (1702 A. D.), that he entered the Naḳshbandī Order, of which his father was a spiritual guide, at the age of 15, and 2 years later succeeded his father in this office. At the age of 43 he made the pilgrimage to Mecca, where he remained for 2 years, occupying himself especially in the study of Ḥadīth. On his return to Dihlī he devoted himself to literary pursuits, and wrote a large number of works, dealing with Ḥadīth and other branches of Muslim theology.

(M. HIDAYET HOSAIN.)

DIHLĪ, (the capital of the early Muḥammadan Kings of India from 602 A. H., and of the Mughal Emperors from 1053, and, since the 12th December 1911 A. D., redesignated as the seat of the Imperial Government of India by His Imperial Majesty King George V at the Durbar held there by him on that date), is situated in latitude 28.38 N., and longitude 77.13 E. on the right bank of the river Djumna, some 120 miles from the point where that stream leaves the Siwalik hills, and stands on the eastern edge of a narrow plain about 8 miles broad at its base and tapering to a point 15 miles further north, where the last outspurs of the Arawalli Mountains, which bound it to the west, end on the river 2 miles above the city, and by their

position at this point protect the plain from erosion. The population of the city in 1911 was 233,000, of whom $^2/_3$ are Muḥammadans. In modern times it has been signalised by the assault and capture of the city in September 1857 A. D. after the outbreak of the Native Army, and the rebellion of the descendants of the House of Tīmūr, and by four great Durbars held at it, the first on the 1st January 1877 on the occasion of the assumption of the Imperial Title by the Queen Empress Victoria, and the last held as above stated by the King Emperor George. Dihlī is the centre of six railway lines, and of the largest body of trade in North India, and in the future proposed for it, will doubtless rise rapidly to the rank of an Imperial city in all respects.

The oldest of the many cities known as Dihlī, usually said to have been seven in number, was the city of Rai Pithōra or the Prithwī Rādjā, a prince of Čawhān Rādjpūt descent, from whom it was captured by Ḳuṭb al-dīn Aibak, lieutenant of Shihāb al-dīn Ghōrī in 589 A. H. In 602 A. H. the conqueror became an independent King, and the first of the Slave or Turkī dynasty of Dihlī, which ruled till 689. By him and by the Emperor Altamsh (Īltutmish), who succeeded in 607, were constructed the magnificent minār and tower of victory 258 feet high, known as the Ḳuṭb Minār, the famous Ḳuṭb al-Islām mosque made out of the materials furnished by Djain temples destroyed on the spot, the graceful screen of lofty arches on the west side of the mosque, and the richly decorated tomb of the last emperor. Inside the mosque is the famous iron pillar erected at this spot by a Tomar predecessor of the Prithwī Rādjā. The second King of the next, the Khaldjī dynasty, ʿAlā al-Dīn, added the beautiful ʿAlāī Darwāzah, or porch of approach, and proposed a great extension of the mosque, and the construction of a second enormous minār, but these never got beyond the stage of inception. His tomb at the southwest corner of the enclosure, and that of the Emperor Balban (died 686 A. H.), which lies $^1/_2$ mile to the southeast of it, are now complete ruins. Outside the enclosure of the city to the southwest is the shrine of the Čishtī Saint Ḳuṭb al-dīn Ḳākī (died 632 A. H.), round which are the graves of some of the latest Emperors of Dihlī, and other notable persons. The Sulṭān Raẓiya, daughter of Altamsh (Īltutmish) who reigned three years from 634 A. D., was the only female ruler among the Kings and Emperors of Dihlī.

The second capital Sīrī was built by ʿAlā al-dīn Khaldjī (695—715 A. H.) two miles north of the first, and the space enclosed by the walls connecting the two, and known as Djahān-panāh, is reckoned as the third city. This was the Dihlī captured by the Mughal Tīmūr Lang in 800 A. H.; the only remains in and near it, date from the time of the following dynasty. One of these, the Khirkī mosque, is interesting as being entirely roofed over like the mosques at Gulbarga and Cordova. The Taghlaḳ kings founded two capitals, Taghlaḳābād and Fīrōzābād. The first, which lies 4 miles to the southeast of Sīrī, is an utter ruin, but the immensely high sombre walls of the city and citadel are still visible for many a mile round, and the tomb of the founder (died 725 A. H.) still stands in the fortified enclosure in the lake, now dry, which once protected it: it probably suggested the arrangement of the tomb of Shēr Shāh at Sasarām (died 952 A. H.) The site of the fifth capital was selected by the Emperor Fīrōz Shāh (752—790) some five miles north of Sīrī. This was probably much larger than the Mughal Dihlī, and extended northwards well into the southern quarters of that capital, and southwards to nearly the tomb of Humāyūn. The Kalān, (or Kālī) Masdjid, south of the great Djāmiʿ Masdjid of Shāhdjahān, is of that date; while west of the present city is the very sacred enclosure of the Ḳadam Sharīf, containing the tomb of the Emperor's son, Prince Fatḥ Khān, killed fighting against the Mughals; and on the ridge above Dihlī are ruins of the Royal Hunting seat of Kūshk-i Shikār, called from its commanding position Djahānnumā, in which was placed a stone *lāṭh* (pillar) of the Emperor Asoka. In the fortress, Kōṭila, of the city the Emperor erected another stone *lāṭh*; close to the fortress on the south side was the Djāmiʿ Masdjid, which excited the admiration of Tīmūr. The Emperor Fīrōz Shāh who died in 790 A. H., is buried in a fine domed tomb on the edge of the great tank of Ḥawḍ ʿAlāī, constructed by ʿAlā al-dīn, which lies two miles west of Sīrī. After the destruction of Dihlī by Tīmūr, the authority of the Dihlī rulers became very circumstricted, and after temporary Saiyid and Lōdī capitals at Kilokrī and Mubārakpur, south and southeast of Fīrōzābād, the last rulers of the second dynasty transferred the seat of power to Agra, and there the Mughal conqueror, Bābar, and his son, Humāyūn, resided. After Shēr Shāh the Paṭhān interrex, had driven out the latter, he built the Purāna Ḳila at Dihlī, south of the citadel of Fīrōzābād, and constructed the fine mosque with its beautiful polychromatic decorations there. After his restoration in 962 A. H., Humāyūn resided at Dihlī and met his death by an accident in the Purāna Ḳilʿa, known usually as the Fort of Indrapat. His imposing mausoleum erected by his widow, Ḥādjdjī Bēgam, and his son, Akbar, stands in a garden enclosure a mile to the south, and is the first great architectural achievement of the Mughals in India. The building stands on a fine platform, and is surmounted by a white marble dome which rises above the large central chamber: it is built mainly of red sandstone sparingly relieved with marble inlay and decoration. Close to the mausoleum are the tomb and mosque of ʿĪsā Khān (954 A. H.), the mausoleum (ruined) of the great Mughal noble known as Khānān Khān, son of the famous Bairām Khān who recovered the Empire of India for the young Akbar, and the shrine of Niẓām al-dīn Čishtī (died 724 A. H.). The tomb of the Saint and some Imperial graves here, and the Djāmiʿ Khāns mosque of date anterior to the shrine, are of much interest and beauty. Four miles to the west of these is the tomb of Ṣafdar Djang, the second Nawwāb Wazīr of Oudh (died 1167 A. H.) one of the last Mughal works showing any architectural ambition; and on either side of the road leading to this, we find tombs of the Saiyid and Lōdī Kings, who ruled at Dihlī from 817 to 849 and 849 to 899 A. H.

The Emperor Akbar (963—1014 A. H.) preferred Agra to Dihlī for his capital, and his son, Djahāngīr, preferred Lahore and Kashmīr, when he left Agra. It was to the Emperor Shāhdjahān, who had already constructed the beautiful buildings in the Agra Fort, that the last Imperial

Dihlī, Shāhdjahānābād, owes its creation. His splendid palace there, the Lāl Ḳil'a or Red Fort, was built between 1048 and 1058 A. H.; the grand Djāmi' Masdjid was completed a year or so later; and the other principal mosques of the city, the walls, and the chief palaces were raised during the next eight years. Though not, with the exception perhaps of the Djāmi' Masdjid, of such perfection of simple beauty as the Mōtī Masdjid or Tādj of Agra, the striking walls of the palace-fort at Dihlī made of red sandstone, the two grand entrance gates to it, the Naḳḳār Khāna or music gallery, the spacious Dīwān-i 'Āmm and the elaborately decorated white marble Dīwān-i Khāṣṣ in it, will ever rank among the great architectural and decorative achievements of the world. The Djāmi' Masdjid is one of the few great mosques in the world which is beautifully designed exteriorily as well as interiorily — the enclosed court measures 450 feet each way. The works subsequent to 1070 A. H. showed a sudden and marked decadence. The tomb of Ṣafdar Djang (see above) is one instance of this, and the mausoleum of Ghāzī al-dīn Khān (c. 1165 A. H.) is another, though a less pronounced failure. The reason of this was no doubt that Dihlī ceased to be a truly Imperial capital within fifty years of its creation. The Emperor Awrangzēb, who deposed his father before the original works were wholly completed, left it in 1690 A. D. for the Dakhan and never returned; and at the time of the death of his son, Bahādur Shāh, in 1712, the real power of the Mughal Imperial dynasty was practically gone. Whatever respect it retained was broken by the invasion of the Persian King Nādir Shāh in 1153, and was finally shattered by the sack of Aḥmad Shāh Durrānī in 1170. After this second agony the Djāṭs, Rohilla Paṭhāns and Mahrattas all held possession of Dihlī in turn, and the Emperor Shāh 'Ālam II was a refugee from his titular capital for no less than ten years. Finally in 1803 A. D. the British took possession of the place, and the titular kingship of Dihlī ended in 1858, the last titular King Bahādur Shāh II dying at Rangoon in 1862.

Fortunately Dihlī was visited during the culminating period of its glory by a number of European travellers, and Bernier and Tavernier among these have left full and interesting accounts of the glories of the city and the state and magnificence of the Court. Many prominent features of the former, especially the palaces of the nobles, have disappeared since 1857 A. D., and the main street, the Čāndnī Čauk, leading to the Palace has lost all its oriental attributes and attractiveness. It may be hoped, however, that in its new future as an Imperial city, Shāhdjahānābād will recover much of what it has lost in these respects.

DIḤYA (also DAḤYA) b. KHALĪFA, a Kalbite, who became a companion of Muḥammad after the battle of Uḥud according to Muslim tradition or according to reliable authorities not till after the siege of Medina by the Ḳuraishites. The rest of his *nasab* is variously given and is as uncertain as all else that we know regarding this mysterious personage. He was a rich merchant of pleasant and distinguished appearance, a friend and apparently also a commercial partner of Muḥammad's. The latter compared him to the angel Gabriel and gave credence to the story that the latter had several times assumed Diḥya's features. Whenever Diḥya's caravan reached Medina, all the town ran to meet him leaving the Prophet unattended. It is possibly to this that a passage in the Ḳor'ān (lxii. 9—11) refers. As a Kalbite he must have been perfectly acquainted with the districts bordering on the Syrian *limes*. His business allowed him to go about everywhere freely without arousing any suspicions and he therefore served Muḥammad as a secret agent. According to the *Sīra* he was entrusted with a mission to Heraclius to demand that the latter should adopt Islām. There is no reason to accept this story as true, adorned as it is with legendary details. But in the course of his business journeys Diḥya was able to negotiate with a descendant of the ancient Djafnid Amīrs or with the Shaikhs of the desert areas of Syria and soon afterwards we find the Arabs of these regions entering into relations with Medina. Muḥammad was about to marry Diḥya's sister when death prevented him.

Diḥya commanded a small body of troops at the battle of Yarmūk and continued to play a part though a secondary one in the conquest of Syria; he is said to have been entrusted with the task of capturing Palmyra. Henceforth his career relapses into the mystery which shrouds the earlier part of his life. Possibly he went to Egypt as an isolated reference to him states. It is surprising not to find him playing an active part or even mentioned in the reign of Mu'āwiya, the friend of the Kalbites and diplomats. He is said to have died about the middle of this Caliph's reign in the year 50 = 670 — quite an arbitrary date — and to have been buried at Mizza near Damascus. We do not know if he left any children, the contrary is the more probable. Diḥya was selected by the editors of the *Sīra* along with Ibn al-Ḥaḍramī, 'Amr ibn al-'Āṣ, etc. as typical of those innumerable secret agents, employed by Muḥammad to further his policy throughout Arabia and the lands bordering on it. When Diḥya's caravan was in danger or had been plundered by the Beduins, Muḥammad wasted no time in organising an expedition to relieve him or retake their booty from the robbers. In spite of all the efforts of the Traditionists Diḥya remains a legendary and almost mythical personage. (Cf. the article DJUDHĀM).

DĪK, the cock. He is the most sensual and self-satisfied of birds; of feeble intelligence, as he cannot find his way to his hen-house when he falls from a wall, he deserves praise for his impartial treatment of the hens. When he wishes one of them to come to him, he throws a grain of corn to her; but he only does this so long as he is young and lascivious. In the night he collects his people around him in a safe place and keeps watch at the door against enemies. He lays one egg in his whole lifetime, the cock's egg (*baiḍatu 'l-ʿuḳr*). He proclaims the dawn and it is one of his most remarkable characteristics that he apportions his crowing correctly to the different hours of the night, whether the night is 15 or 9 hours long. The explanation of this is that, according to the Prophet, God created a cock — to be more accurate, a white cock, whose wings are set with emeralds and pearls, or an angel in the form of a cock — beneath his throne, who flaps his wings when the night is at an end and proclaims the praise of God. All the cocks on earth hear this and answer by likewise flapping their wings and crowing.

There are various kinds of cocks; white cocks possess particularly remarkable powers as lions flee before them and they protect the house; Satan cannot enter a house where there is a white cock. Ḳazwīnī and Damīrī give numerous details regarding the medical application of various parts of the body of the cock but the word is not found in Leclerc's edition of Ibn al-Baiṭār.

Bibliography: Ḳazwīnī, *ʿAdjāʾib al-Makhlūḳāt* (ed. Wüstenfeld), i. 412; Damīrī, *Ḥayāt al-Ḥayawān* (ed. Cairo), i. 288. (J. RUSKA.)

DĪK AL-DJINN, ("Cock of the Demons"), a name of the Arabic poet of Syria ʿABD AL-SALĀM B. RAGHBĀN. His ancestor Tamīm had adopted Islām at Muʾta [q. v.] from Ḥabīb b. Maslama al-Fihrī, who became prefect of Ḳinnasrīn near Ḥalab (Aleppo) under Abū ʿUbaida in the year 15 (636-637). Dīk al-Djinn was born in 161 (777-778), spent most of his life in Ḥimṣ (Emesa) and died in 235 (849-850) or 236 in the Caliphate of Mutawakkil. According to his nephew Abū Wahb (*Aghānī*, xii, 142) he was "a frivolous good-for-nothing, bent only on eating and drinking and other enjoyments, a dissipator of his inheritance". He was paid for his poems by the two Hāshimids Aḥmad and Djaʿfar b. ʿAlī. In addition to panegyrics on them, occasional lampoons and elegies on al-Ḥusain b. ʿAlī b. Abī Ṭālib — the poet was a moderate Shīʿite — he also wrote erotic poems in the decadent taste of his period. For example a topical poem by him has survived (*Aghānī*, xii, 146) which shows a peculiar mixture of Syrian-Arab coarseness and Persian vice. They are verses to a beautiful boy, whom he had made overtures to in vain, and who had then been brutally violated by others. "Thou didst not even allow me caresses and kisses; now thou hast had to submit to saddle and bridle being placed on thee (by others)". The Arab accounts of him say that he did not feel himself the equal of other contemporary poets, particularly Abū Nawās, and illustrate this by the following anecdote: Abū Nawās visited Dīk al-Djinn when he was going to his patron al-Khaṣīb in Egypt but the Syrian hesitated at first to receive the distinguished Baghdād poet.

The few fragments of Dīk al-Djinn's poems that have survived to us owe their principal interest to the fact that he champions the equality of his countrymen in the narrower sense, the Arabicised Syrians, with the Arabs proper and sometimes also inveighs against the rivalry between North and South Arabians. The fact that he never left the narrow limits of his Syrian fatherland and never went to the ʿIrāḳ nor anywhere else to importune the great ones of the empire with poems, may be due not merely to his particularistic attitude but also to a sense of his inferiority as a poet.

Bibliography: *Aghānī*, xii. 142—149; Ibn Khallikān (ed. Wüstenfeld), N°. 394; transl. by de Slane, ii. 133; Goldziher, *Muhammedanische Studien* i. 156. (A. SCHAADE.)

DIKKA, The platform, borne upon pillars and surrounded by a parapet, which stands opposite the miḥrāb of a mosque. It is placed either in the front or in the centre of the portico. Also a long wooden seat or sofa placed along the wall of a room.

Used vulgarly for *tikka*, it denotes a running string tied round the body to fasten the drawers (*libās*) in Muslim attire. The ends of this string or band are usually ornamented but are concealed by the outer dress. (A. S. FULTON.)

DILĀWAR KHĀN, a name of ʿAMĪD SHĀH DĀʾŪD (a descendant of Shihāb al-Dīn Ghōrī), who was appointed governor of Mālwa by Muḥammad Shāh IV. of Dihlī (792—795 A. H.). In 801 he received his suzerain Maḥmūd II. of Dihlī, who had fled before Tīmūr, with due honour in Dhār, but in 804 he made himself independent of Dihlī. He thus became the founder of the first independent Muḥammadan dynasty of Mālwa, which became extinct with his grandson in 839. He reigned as king in Dhār from 804—808, but does not seem to have struck coins in his name. Two inscriptions of his period have however been preserved on the Djāmiʿ Masdjid (now called the Lāt Masdjid) built by him in Dhār. He died in 808 and the story goes that he was poisoned by his son Hoshang.

DILĀWAR PASHA, a Kroat by birth, brought up in the Imperial palace, after leaving the Serāi became successively governor of Cyprus, Baghdād, Diyārbakr, Rumeli and after again being governor of Diyārbakr took part in the campaign against Poland in 1621. During the siege of Chocim he was appointed Grand Vizier on the 1st Dhu 'l-Ḳaʿda 1030 = 17th September 1621; on the revolt of the Janissaries against Sulṭān ʿOsmān II in May 1622 the rebels demanded his execution; the Sulṭān handed him over and the Janissaries cut him to pieces (on the 8th Radjab 1031 = 19th May 1622). The English ambassador Roe

(*Negotiations*, 24) describes him as an earnest, able and moderate man.

DIMOTIKA (türk. DIMETOḲA), the ancient Διδυμοτεῖχος, a town in Rūmili, in the province and sandjaḳ of Adrianople, 26 miles south of the latter town, near the confluence of the Ḳizil-Deli-Čāi and the Maritza; it is the capital of a ḳaḍā and a station on the Dede-Aghač railway. The population is 8707, mainly Muḥammadans. It has an ancient fortress now in ruins, seven large mosques and a reservoir which has now been converted into a prison. It was taken in 763 (1362) by Murād I. who built a palace there. Charles XII made it his headquarters from February 1713 to October 1714. — The ḳaḍā of Dimotika comprises 4 nāḥiya (Ḳuleli-burghaz, Ḳaradja-khalil, Ṣaltiḳ and Ḳara-kilisā) and 42 villages and has a population of 26,551, the great majority of whom are Orthodox Greeks. In addition to vegetables, tobacco and the vine are cultivated.

DĪN. Behind the chaos of meanings given by the Arabic lexicographers under the form *dīn* (see, for example, Lane, *Lexicon*, p. 944) lie three separate words. There is (i.) an Aramaic-Hebrew loanword meaning "judgment"; (ii.) a genuine Arabic word meaning "custom", "usage" which is cognate to (i), being related as the Hebrew *mishpāṭ* to *shāphaṭ*; (iii.) an entirely distinct Persian word meaning "religion". See Nöldeke in *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxxvii, p. 534, note 2, and for the Persian word, derived from *daēnā*, *Grundr. d. iran. Phil.*, I, 1, pp. 107, 270; I, 2, pp. 26, 170; II, p. 644. Vollers contested the existence of *dīn* as a genuine Arabic word and, showing that the Persian *dīn*, religion" was already in use in Arabic in pre-Islamic times, held that the meaning "custom", "usage" was derived from it (*Zeitschr. f. Assyr.* xiv. p. 351). This confusion naturally involved the Muslim exegetes of the Ḳurʾān in endless difficulties. Thus, for example, in *Māliki Yawmi 'l-Dīn* (i. 3; cf. Baiḍāwī, Rāzī and Ṭabarī, i. p. 51), they mostly recognized a necessary meaning of "reckoning", "recompense", yet were in great doubt how to reach it. But under one or other of these three meanings all the Ḳurʾānic passages can be brought. Theologically, *dīn* is defined as a divine institution (*waḍʿ ilāhī*) which guides rational beings, by their choosing it, to salvation here and hereafter, and which covers both articles of belief and actions (*Dict. of Tech. Terms*, p. 503). It thus means "religion" in the broadest sense and is so vague that it was felt necessary to define its difference from *milla* [q. v.] "religious community", *madhhab* [q. v.] "school of canon law" and *sharīʿa* [q. v.] "system of divine law." It may mean any religion, but is used peculiarly for Islām, "the religion with Allāh" (Ḳur. iii. 17). It covers three things: *Islām* in its five elements, Witnessing to the Unity of Allāh and to the prophetship of Muḥammad, Worship, Poor-rate, Fasting, Pilgrimage; *Īmān*, Faith; *Iḥsān*, Rightdoing. These three make up the *dīn* of Muslims; see the tradition of how Muḥammad answered Gabriel's questions (Shahrastānī, ed. Cureton, p. 27). Similarly, all religions, as opposed to intellectual, knowledge, meaning what is gained by prophets through major inspiration (*waḥy*) and by saints through minor inspiration (*ilhām*) and received by others on authority from them, can be called *al-ʿulūm al-dīnīya*.

DĪNADJPUR, district in Eastern Bengal, India: area, 3,946 sq. m.; pop. (1911), 1,687,863, of whom about one half are Muḥammadans. At the beginning of the 15th cent. A. D., Rādjā Kāns, a Hindu landowner of Dīnadjpūr, defeated the Muḥammadan king of Bengal and seized the throne, on which he was succeeded by his son and grandson, Djalāl al-Dīn Muḥammad and Shams al-Dīn Aḥmad (1414—1442 A. D.). The tomb of a pīr named Nekmard is frequented by pilgrims, and is also the scene of an annual cattle fair, at which the attendance reaches 100,000 persons.

DĪNĀR, from the Greek-Latin *denarius* (*aureus*) the name of the unit of gold currency of early Islām. Why the Arabs called the gold piece *dīnār* is not quite clear from Greek or Latin inscriptions or literary sources. Pliny once (*Hist. Nat.* lib. xxxiii. § 13) calls the aureus *denarius*, and we frequently find the expression *denarius aureus* or δηνάριον χρυσοῦν, in the east as well as the equation δηνάριον = νόμισμα χρυσοῦν but the Arabic and Syriac name *dīnār* seems to point to the fact that in Syria the gold coin (after the reform of the currency by Constantine I. 309—319) was usually called simply δηνάριον.

The Arabs knew and used this Roman gold coin before Islām (*Ḳorʾān*, iii. 68). All Muslim Traditionists agree that the currency reforms of the Caliph ʿAbd al-Malik which were effected in 77 (696) left the standard gold coin unaltered. The exact weight of this coin may be readily

ascertained from the great exactness with which the **earliest** reformed dīnārs were struck; the dīnār is thus found to weigh **4.25** grammes (66 grains). This corresponds exactly to the actual weight of the contemporary Byzantine solidus which was again based on the later Attic drachm of $4._{25}$. The Egyptian glass-weights (*ṣandjat* q. v.) enable us to test this. As gold coins in the East have always passed by **weight** and **not by tale**, the weight of the current dīnār at times differed considerably from the legal weight of $4._{25}$. (The contrary assertion in Muḳaddasī, ed. de Goeje, p. 240 is only exceptionally true).

The oldest dated dīnār known to us dates from the year 76 (695) and still bears the Byzantine type (figure of the Caliph); a similar piece is dated 77; in the same year appear the reformed dīnārs of ʿAbd al-Malik. These new coins, unlike the dirhams [q. v.] do not bear the mint; it is practically certain that the Umaiyads struck gold coins only in Damascus and Cairo and after 100 (718) in Cordova also. After the fall of the Umaiyads the chief mint for gold seems to have still for a period been Damascus, but in 146 (763), it was transferred to the newly founded Baghdād. In the reign of Maʾmūn (198—218 = 813—833) the mintage of gold was decentralised and a new type, similar to that of the dirhem prescribed; after 212 (827) gold was struck in the most important of the provincial capitals. The secondary dynasties also made no alteration in the dīnār; only in South Arabia was another standard ($2._{97}$ grammes) (46 grains) used.

In Baghdād the last dīnār was struck soon after the fall of the ʿAbbāsids; the word dīnār disappears from these gold coins about 661 (1262). In Egypt the last dīnārs were struck in the reign of Saif al-Dīn Ḥādjdjī (747 = 1346). Perhaps as early as the reign of al-Ashraf Shaʿbān (764—778 = 1362—1376) but more probably not till that of al-Ashraf Barsbey (825—842 = 1421—1438), a new gold coin was introduced, the *ashrafī* ($3._{47}$ grammes = $53._5$ grains) which displaced the dīnār throughout Eastern Asia. The dīnār, which had never really gained a proper footing there, disappears from India in the reign of Nāṣir al-Dīn Maḥmūd (644—664 = 1246—1265), who introduced the national gold tanka ($11._{34}$ grammes = 176 grains) as the official standard coin. In the Maghrib dīnārs were struck to the end of the fifth century but the reckoning by dīnārs remained in use till a much later period.

Multiples and subdivisions of the dīnār were at all times in use: ʿAbd al-Malik appears to have introduced the triens (*thulth*) of $1._{40}$ grammes (22 grains) as may be presumed from a piece of the year 92. In the Fāṭimid period the quarter dīnār (approx. 1 gramme = $15._5$ grains), was a common coin while in Sicily it was almost exclusively struck and survived into the modern period as the *tari d'oro*.

The standard was always very high, the gold being as pure as the technical processes rendered possible.

In the history of Mediterranean commerce the dīnār plays an important part and was imitated by many Christian rulers under the name of *bezant sarrasinat*.

In Law the legal dīnār is still one of $4._{25}$ (66). In finding an equivalent for amounts given by Arab authors the dīnār must always be taken as $4._{25}$ (66) fine gold unless another value is expressly stated.

(See also the articles DIRHAM, FALS, and NUMISMATICS).

DĪNAWAR (often also less correctly written DAINAWAR), in the middle ages one of the most important **towns of Djibāl** (Media), now in ruins. Its exact location is according to the latest road-map by Th. Strauss (see *Bibl.*): 48° 25′ East Long. (Greenw.) and 34° 35′ N. Lat. Dīnawar lies on the direct line between Kengawer (Kanguwār) in the S. E. and Kirmānshāh (Karmīsīn) in the S. W. and is almost equally distant from both, namely 30—32 miles. It lies on the northeast edge of a fertile plain some 5000 feet above sea-level, watered by the Āb-i Dīnawar. This river, which takes its name from the town, enters a narrow ravine (Teng-i D. = Pass of D.) at the southwest corner of the plateau, which afterwards opens out into a broad valley, and finally joins the Djamas-āb which belongs to the Karkhā watershed. When Ibn Khurdādhbih (ed. de Goeje, p. 176) says that the Nahr al-Sūs = Karkhā rises in the neighbourhood of Dīnawar, he is obviously considering the Āb-i Dīnawar as its real source.

The foundation of Dīnawar, which appears also in Syriac sources (as Dīnahwar), dates from the pre-Muḥammadan period; in the days of ʿOmar it was the most populous town in the district of Hamadhān. Immediately after the decisive battle of Nihāwand (c. 21 = 642) it was surrendered to the Arabs by the Persian governor. In Muʿāwiya's reign it received the new name of Māh al-Kūfa, because the taxes raised from it were applied for the benefit of the citizens of Kūfa, more particularly for payment of the garrison there. In the administrative division of the Caliph's empire Māh al-Kūfa appears not only as the official name of

the town of Dīnawar but also as that of an administrative division of Djibāl with two districts: Dīnawar, comprising the upper lands and Ḳarmīsīn the lower. In the west, Māh al-Kūfa was bounded by the district of Ḥulwān, in the east by that of Hamadhān, in the south by Māsabadhān and in the north by Ādharbaidjān, thereon cf. Ḳudāma in *Bibl. Geogr. Arab.* (ed. de Goeje), vi. 243 *et seq.* As to the word Māh, this is not to be explained, as do the Arab authors, as a Persian noun equivalent to the Arab *ḳaṣba* = "town, capital"; Māh rather corresponds in form and meaning to the ancient Māda = "Media". All geographical names which are undoubtedly compounded with Māh and can be fairly definitely located (cf. for example, Māh al-Baṣra = Nihāwand, a name similar in origin to Māh al-Kūfa) belong to Media. Māh al-Kūfa is therefore to be interpreted as: Media of Kūfa, i. e. that part of Media which belongs to K.; on Māh cf. particularly Nöldeke in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxxi. 559 *et seq.* and in his *Gesch. der Perser und Araber zur Zeit der Sasaniden* (1879), p. 103, 2; J. Marquart, *Ērānšahr* (Berlin, 1901), p. 18-19.

Dīnawar likewise enjoyed considerable prosperity in the Umaiyad and ʿAbbāsid periods. When Ibn Ḥawḳal wrote (iv^{th} = x^{th} century) it was only about one third less than Hamadhān. Muḳaddasī praises its well built bazaars and the rich orchards around the town; he also, as does Ḳazwīnī, makes particular mention of the excellent cheese manufactured there. The population was a mixture of Persians and Arabs; as Masʿūdī (*op. cit.*, iii. 253) tells us, the Kurdish tribe of Shūhadjān also led a nomadic life in the country round. The confusion that broke out in the last years of al-Muḳtadir's reign brought ruin to the town. When the rebellious general Mardāwīdj of Gīlān seized the whole province of Djibāl after defeating the troops sent against him by the Caliph, Dīnawar also fell into his hands (319 = 931) and several thousands (the figures vary from 7000 to 25,000) of the inhabitants perished soon afterwards. Ḥasanwaih (Ḥasanūyah) a prince of the Kurds living in this region founded a small independent kingdom of which the capital was Dīnawar and was able to retain possession of it for almost 50 years (till his death in 369 = 979). In the viii^{th} (xiv^{th}) century the town was still inhabited, according to Mustawfī. Its doom seems to have been sealed amid the horrors of the Mongol invasion under Tīmūr.

The present ruins of Dīnawar, which are quite uninhabited, were last visited by de Morgan and Th. Strauss. Strauss (*op. cit.*) gives the following brief account of them: "The site of Dīnawar is only indicated by mounds of earth, which have several times been ransacked in the search for coins; numerous finds are still made, especially by peasants tilling the fields". According to the same traveller, traces can still be seen in many places in the above mentioned Teng-i Dīnawar of an ancient road hewn out of the rock, which probably connected Dīnawar with Baghdād.

(M. STRECK.)

AL-DĪNAWARĪ, ABŪ ḤANĪFA AḤMAD B. DĀʾŪD, Arabic philologist and scientist, probably born in the first decade of the 3rd century of the Hidjra at Dīnawar in the Persian ʿIrāḳ, received his education in philology from the father of Ibn al-Sikkīt, the Kūfa grammarian, and from the latter also; in 235 he stayed in Iṣpahān to make astronomical observations, which he recorded in his *Kitāb al-Raṣad*. He afterwards seems to have spent most of his time in his native town where his observatory was pointed out for several centuries later. The dates given for the year of his death vary; but the 26th Djumādā I. 282 = 24th July 895 appears the most reliable. His literary activity, like that of Djāḥiẓ, with whom he has often been compared, combined entertainment with instruction. Only his *Kitāb al-Akhbār al-Ṭiwāl* has survived in its entirety; it selects those periods of the history of the world for which Tradition affords material for an exhaustive survey. It also devotes particular attention to matters of special interest to Persians. He therefore gives a full account of the history of Alexander, of the Sāsānids, the conquest of the ʿIrāḳ by the Arabs with a detailed description of the battle of Ḳādisiya, the battles between ʿAlī and Muʿāwiya and the Khāridjis, the death of Ḥusain, the risings of the Azraḳīs and of Mukhtār, the fall of the Umaiyads and the intrigues of the ʿAlids, particularly in Khorāsān in a brief history of the Caliphs (cf. W. Guirgass's edition, Leiden 1888; pref. varr. and index by I. Kratchkovsky, ibid. 1912). His famous *Flora* (*K. al-Nabāt*), the original of which is lost but numerous extracts have been preserved in the lexicographers, particularly Ibn Sīda, and also in Ibn al-Baiṭār, was of much greater importance to science. Like the much less comprehensive works with similar titles by Abū Zaid and Aṣmaʿī, it was the result of a philological study of the old poets and was intended to explain the numerous plants mentioned by them. It was therefore confined to the flora of Arabia but included also plants which had been brought from foreign countries and acclimatised there. His clear and exhaustive descriptions, for which he was possibly somewhat indebted to older works, were not based on his own observations but were compiled from information obtained by him or his predecessors from Arabs of the desert. As the latter were very keen observers of all that surrounded them and had the power of accurate description, they had a terminology for plants and their parts which was almost scientific in its precision. Besides the descriptions of plants, which have for the most part alone survived, the work, which was still accessible to the author of the *Khizānat al-Adab* in six large volumes, in addition to numerous illustrative quotations from the poets, must have contained many philological and

historical excursus on the latter. It began with a detailed account of the kinds of soil and formations of Arabia, its climate and distribution of water, and the general conditions necessary for the growth of plants. It then proceeded to treat of the classification of plants in general and the morphological structure of the individual plants. The main portion of the work treated of the individual plants in three groups: plants cultivated for food, wild plants and plants with edible fruits. The second group dealt with the plants in it first according to their places in which they are found, then according to their nature, and partly according to their commercial value. The work, on which ʿAlī b. Ḥamza al-Baṣrī wrote a trifling criticism, dealing only with points of philology, in a section of his *K. al-Tanbīhāt ʿalā Aghlāṭ al-Ruwāt*, became the main authority on plant-names for later lexicographers.

ḌIRGHĀM ("Lion") a vizier of the last Fāṭimid al-ʿĀḍid [q. v., p. 137]; his full name was ABU 'L-ASHBĀL AL-ḌIRGHĀM B. ʿĀMIR B. SAWWĀR. As to his origin, his pure Arab blood is emphasised and his epithets al-Lakhmī al-Mundhirī also seem to point to his descent from the ancient rulers of Ḥīra. He had risen from the corps of the Barḳiya and was one of the confidants of Ṭalāʾiʿ b. Ruzzīk [q. v.], who appointed him generalissimo in 553 = 1158. In the same year he defeated the Christians near Ghazza. In spite of his close relations with the Banū Ruzzīk he was one of Shāwar's [q. v.] chief allies in bringing about the fall of Ruzzīk b. Ṭalāʾiʿ, whose teacher he had actually been in all knightly arts. Under the new vizier he received the office of *Ṣāḥib al-Bāb* but apparently did not consider that his treachery had been sufficiently rewarded, as he rose against Shāwar nine months later (Ramaḍān 558 = Aug. 1163), drove him out of the country, put his son Taiy to death and seized the vizierate. The Caliph confirmed him in this position and granted him the title of *al-Malik al-Manṣūr*; his previous title of *Fāris al-Muslimīn* passed to his brother Nāṣir al-Dīn. Fortune did not long favour Ḍirghām. His attempt to make an alliance with Nūr al-Dīn, with whom Shāwar had taken refuge, was a failure; the hostile attitude of the Barḳiya in Egypt drove the jealous vizier to dreadful deeds of cruelty, which deprived the land of its bravest spirits. The invasion of Amalrich I, king of Jerusalem, who was going to compel by force of arms the payment of the tribute previously promised him, brought further trouble. He inflicted heavy losses on the Egyptians at Bilbais and only retired when Ḍirghām resorted to the desperate measure of breaking down the embankments and flooding the country. But soon news reached the vizier of the success of the efforts of his enemy Shāwar in inducing Nūr al-Dīn to undertake a campaign against Egypt and now too late he sought to make a permanent alliance with Amalrich by promises, which meant a considerable humiliation of Egyptian power; Shīrkūh, Saladin and Shāwar invaded the country, Nāṣir al-Dīn and his army, most of the leaders of which had been won over to the enemy, suffered a severe defeat at Bilbais and soon afterwards Shāwar entered Fusṭāṭ. Ḍirghām's adherents gradually melted away; he forfeited the last remnants of his former popularity when he raided the funds of the Waḳf for orphans to replenish his resources; in vain also he implored the help of the Caliph. When finally, abandoned by every one, he fled, he was murdered by a mob at the tomb of the Saiyida Nafīsa (Radjab or Ramaḍān 559 = May-June or July-August 1164). His head was cut off and carried through the streets of Cairo; his body was not buried till three days later near the Birkat al-Fīl and a dome erected over the grave.

Ḍirghām is unanimously described as a brilliant and powerful personality. His extraordinary skill in all manly sports is particularly emphasised; he was a remarkably brave man, a friend to learning, an excellent poet and calligrapher.

DIRHAM. 1. A unit of the silver coinage in the Arab monetary system. The name (*Gr. δραχμή, Pers.: diram*) was in use from ancient times, while the coin to which it was applied was borrowed by the Arabs from the Persians. The derivation of the legal weight of the dirham is more difficult than that of the dinar, as the dirhams were not struck very accurately. The definition of the legal dirham is very variously given by the historians, but all agree that the weight of the dirham was to that of the mithḳāl as 7 : 10. But since mithḳāl [q. v.] has many meanings, this equation can only have a meaning if the mithḳāl is the legal dinar, i. e. the Meccan mithḳāl of 4.25 grammes. We thus obtain as the most probable weight, **2.97** grammes, which best agrees with the extant coins and glass weights as well as with the coin-weights of the time of al-Muḳtadir (295—320 = 908—932) discovered by E. T. Rogers in the Faiyūm. Sauvaire took as the basis of all his calculations the figure 3.0898, arrived at by the Egyptian Commission of 1845, and thereby invalidated his results from the very first. Decourdemanche, who points out Sauvaire's error, has arrived at the figure 2.83 by a series of ingenious calculations, but this does not agree with the necessary condition of being $^{1}/_{10}$ of a mithḳāl.

The legal dirham of 2.97 was perhaps first instituted by the Caliph ʿOmar. ʿAbd al-Malik ordered that the dirham of this weight was to be the only legal silver coin. There can be no doubt about the derivation of the Arabic from the Sāsānian dirham. The latter was introduced by Ardas͟hīr I (226—241 A. D.) on the standard of the new Attic drachm of 4.25 grammes and remained almost unchanged till the fall of the Sāsānian empire (the drachms of Ardas͟hīr III of the year 628 weigh 4.10 grammes). The Arab governors in Persia retained the Sāsānian type but struck on a reduced standard (3.90); many of their coins weigh roughly 2.97 and thus agree with the legal dirham.

The earliest purely Muḥammadan dirhams (apart from doubtful and isolated specimens) date from the year 75 (694); after this date coins of the new type were struck in all the provinces although the Arabo-Sāsānian drachms continued to be struck in Persia for some time longer (in Ṭabaristān till about 180 = 796).

The copper dirhams of the vi[th] and vii[th] centuries A. H., struck by the Urtuḳids, Zangids and other Turkish dynasties of Asia Minor are quite unique. They are large copper pieces (averaging 12 grammes in weight), with types and probably specially destined for use in commerce with Christians.

The dirham played an important part in Northern and Eastern Europe where it formed the sole currency from 600—1000 A. D.

Multiples and subdivisions of the dirham are rare in the early centuries of the Hid͟jra. The most usual division was that into sixths (*dānaḳ* = *obolus*) and the commonest small coin the half. The dirham disappears about the same time as the dīnār. In the early days of Islām the relation of gold to silver was fixed at 14:1 (20 dirhams = 1 dīnār).

2. Dirham is also the name of a weight, (*dirham kail*) weighing 3.148 grammes and totally distinct from the coin of the same name. It survived, with local variations down to modern times as an apothecary's and goldsmith's weight. The French expedition found it in use in Cairo in 1799, weighing 3.088 grammes and the Commission of 1845, 3.0884. In Constantinople at the present day its legal weight is 3.207 grammes.

Ges. Wien*, 1902); J. A. Decourdemanche, *Étude métrologique et numismatique sur les Misqals et Dirhems arabes*, 1908; and the authors cited in the article DĪNĀR. (E. v. ZAMBAUR.)

DIU (DWIPA) is an island with an area of 25 square miles, situated at the southern point of the Kathiawar Peninsula of Gud͟jarāt, India. It was taken from the Cāvada Rād͟jpūts by the Muḥammadans in 1330 A. D. In the time of the Sulṭān Maḥmūd Bēgara of Gud͟jarāt (1456—1513 A. D.) it was a wealthy Muḥammadan port; but shortly afterwards it was taken by the Portuguese, who have held it ever since. It was of importance in the xiv[th]—xvi[th] centuries as the port of call of vessels trading between India and the Persian Gulf and Red Sea.

DIVAN. [See DĪWĀN.]

DĪW (P.; older form *dēw*, Avestan *daēva*, Sanskr. *dēva*, a god), in the Irānian religion, the name of evil spirits, the powers of darkness, the creatures of Ahriman, the personifications of sins; their number is legion. At their head is a group of seven principal demons (including Ahriman) opposed to the seven Amshaspands. They were subject to D͟jams͟hīd (Firdawsī, *S͟hāh-Nāma*, ed. Mohl, i. 49, cf. the Muslim legend of Solomon).

In the Irānian epic, the white dēw (*dīw-i safīd*) comes to the help of the king of Māzandarān against king Kai-Kāwūs; his country is inhabited by dīws skilled in magic (Firdawsī, *S͟hāh-Nāma*, i. 497); he is defeated by Rustam who also fights against two other dīws, Akwān (Akūman) and Arz͟hang. King Tahmurat͟h is surnamed *dīw-band* "the conqueror of the demons", because he overcame them in a pitched battle with the help of magic; the hostile army was commanded by the black dīw (*siyāh-dīw*); it was they who taught the king how to write (*S͟hāhn.*, i. 43—45).

Bibliography: W. Jackson, in the *Grundriss der Iran. Philologie*, ii. 165, 176, 196, 646, 663, 662; Spiegel, *Erânische Alterthumskunde*, ii. 126—136. (CL. HUART.)

DĪWĀN (DIVAN) (from a hypothetical Irānian word *dīwān*, connected with *dabīr* "writer", which is connected by M. Andreas with the Assyrian *dup*) public registers of receipts and expenditure, kept in Greek (Syria and Egypt) and in Pahlavī (Persia) in the early years of the conquest, then translated into Arabic and continued in that language from this time on (81 = 700, al-Balād͟hurī, p. 193, 300; al-Māwardī, p. 349). The name next passed to the offices of the treasury and thence was extended to the government of the ʿAbbāsid Caliphs and even in Saladin's time to the Caliph himself (Ibn K͟hallikān, transl. de Slane, iii. index). *Dīwān al-Zimām* is the office where the register of revenue and expenditure was kept; *Dīwān al-Tawḳīʿ*, that of the State Chancery, the head of which had to audit the accounts of the governors (A. v. Kremer, *Culturgeschichte*, i. 198). The *Dīwān al-Birr*, established by ʿAlī b. ʿĪsā, minister of the ʿAbbāsid Caliph al-Muḳtadir, administered certain estates which that minister had made *Waḳf* (al-Fak͟hrī, p. 315). The *Dīwān al-K͟hātam* "Office of the Seal", instituted by Muʿāwiya, survived till the middle of the ʿAbbāsid period.

In Arabic, Persian and Turkish, *Dīwān* also means a collection of the works of a poet, usually arranged in the alphabetical order of the rhymes. The word further means a large building, where customs were collected, foreign merchants put up, also used as a warehouse and exchange and thus was practically synonymous with *k͟hān* or *kārwānsarāy*; it is used with this sense more particularly in the Maghrib (Dozy, *Suppl.* i. 479).

DĪWĀNĪ. [See ARABIA (ARABIC ALPHABET), p. 387.]

DIWRIGI, a town in Asia Minor, the

capital of a Kaḍā of the province and sandjaḳ of Siwās, near the Čalta-Irmaḳ, a tributary of the Ḳara-Ṣū (Western Euphrates), lies at the bottom of a valley surrounded by high mountains; the population is 5,600 of whom 3,000 are Sunnīs and 1,500 Shīʿīs. In it are the ruins of a fortress the surrounding wall of which alone survives, the mosque of the Amīr Shāhānshāh (*Ḳalʿa-Djāmiʿ*) built in 576 (1180) or 596 (1200), and the mosque of Aḥmad Shāh b. Sulaimān Shāh (*Ulū-Djāmiʿ*) built in 626 (1228) of yellow freestone and well preserved; it has been restored on several occasions under the Ottoman Sulṭāns but is now used as a public granary. A tomb of the same date in an old Muslim cemetery, an octagonal building with a pyramidal roof of stone, is the mausoleum of the Amīr Ḳamar al-Dīn (d. 592 = 1196). It is mentioned by the Byzantine historians under the name of Tephrike in their accounts of the Manichaean sectarians called the Paulicians. The early Arab geographers know it by the name of Abrīḳ and believed that the main source of the Euphrates was there (Yāḳūt, i. 87; Ibn Rosteh, p. 93; Guy Le Strange, *Journ. R. As. Soc.*, 1896, 733; *Kitāb al-Badʾ*, iv. 54). Conquered about 464 (1071) by the Amīr Mangūdjak, a Saldjūḳ general, who founded a dynasty bearing his name there, it afterwards passed under the sway of the Saldjūḳs of Rūm (625 = 1228); Bāyazīd I. regained it for the Ottoman empire in 801 (1397) at the end of the Temurlenk campaign (Saʿd al-Dīn, *Tādj al-Tawārīkh*, i. 150). It was held for a time by Egypt (we have inscriptions of Sulṭān Djaḳmaḳ (854 = 1450) and various governors: cf. Khalīl al-Ẓāhirī, ed. Ravaisse, p. 51; Ḳalḳashandī, *Dawʾ al-Ṣubḥ*, p. 298) and retaken in 922 (1516) by Selīm I. It was long believed to occupy the site of Nicopolis, the town built by Pompey to commemorate his victory over Mithradates; but the latter has now been definitely located to the southeast of Enderes. — The Kaḍā comprises 9 nāḥiyas and 125 villages with a total population of 48,907, of whom 24,520 are Sunnī and 12,261 Shīʿī. It has market gardens (tomato, melon and cucumber), vineyards, and wheatfields all of which are very fertile. In the mountains there are deposits of iron ore and loadstone, which appear to be no longer worked.

(Cl. Huart.)

DIYA or ʿAḲL is the bloodwit or compensation paid by one who has committed homicide or has wounded another. In the Djāhiliya the price paid by the homicide is said to have been ten she-camels. ʿAbd al-Muṭṭalib redeemed his son ʿAbdallāh by the sacrifice of ten she-camels, but, as he had to repeat the sacrifice ten times, a hundred she-camels was henceforth considered the equivalent of a life; and this is the amount laid down in a letter written by Muḥammad to ʿAmr b. Ḥazm. The same letter fixed the compensation for a blow penetrating the brain or abdomen at one third of that amount, for the loss of an eye or hand or foot at half, for a tooth or for a wound exposing the bone at five camels. ʿOmar put the money equivalent of a hundred camels at 1000 dīnārs or 12,000 dirhems — the former payable by the 'people of gold' (the people of Egypt and Syria) and the latter by the 'people of silver' (the people of ʿIrāḳ), payment being spread over three or four years. Camels were not accepted as payment from these 'people of the towns'; gold was not accepted from the 'people of silver', nor silver from the people of gold, and neither gold nor silver from the tent-dwellers, who paid in she-camels. These camels must be of a definite age and condition, twenty-five she-camels one year old, twenty-five two years old, twenty-five three years old and twenty-five four years old — this for intentional homicide: for unintentional homicide twenty she-camels one year old, twenty two years old, twenty he-camels two years old, twenty she-camels three years old, and twenty she-camels four years old.

A woman receives the same compensation as a man up to one third of the Diya of 100 camels: if above one third, then she receives half of what a man does. This is in the system of Mālik: in that of Shāfiʿī she receives in certain cases half a man's Diya, *e. g.* five camels for the loss of a finger instead of ten. (Cf. Lane, art. *ʿaḳala*). A minor or an insane person is not personally liable to give compensation in ordinary circumstances. The Diya for the latter is paid by the state. If a minor and a person of age together kill a Muslim intentionally, the latter is put to death, the former paying half the Diya. Similarly if a slave and freeman kill a slave intentionally, the former is put to death, the latter paying half the value of the murdered slave.

The Diya for wounding a slave so as to expose the bone is a twentieth of his value, for a wound penetrating the brain or abdomen one third, and so on in proportion to the loss in his market value. The law of retaliation holds between slaves as between free persons. If one slave kill another, the owner of the latter may demand the life of the former, or the value of his own slave, or the owner of the former may surrender his slave in compensation. If a Muslim slave wound a Jew or a Christian his master must pay compensation, even if he have to sell the slave, but may not hand over his Muslim slave to these.

If a Christian or a Jew be killed, his bloodwit is half that of a free Muslim. A Muslim may not be put to death for an unbeliever unless he have killed him treacherously. The bloodwit of a Magian is 800 dirhems. The compensation due to these three classes for minor injuries is in the same proportion.

In cases of homicide or wounding unintentionally the perpetrator alone is liable to fine, and, if he cannot pay, the fine remains a debt against him, but his kin may pay it if they wish, for the sake of peace. In this respect, his nearest kin are his brothers on his father's side, then all the male descendants of his father's father, and so on.

A murderer or homicide cannot inherit the Diya of his victim, nor can the former inherit his property, since that might have been his motive in killing him.

The Diya is of two kinds: Diyat al-ʿAmd, compensation for an intentional injury, and Diyat al-Khaṭaʾ, compensation for an unintentional. The Diya in full is paid not only for a life, but also for the destruction of the lips, of the eye of a one-eyed person, of the tongue and of the two ears if the hearing be destroyed. If the sight of

one eye be destroyed the Diya is a hundred dīnārs, and that for a deep wound in the face is more than for one in another part of the head.

Women and children are not liable to pay Diya. Employers are liable for injury to minor employees. In the case of a riot between two parties the injured or killed should receive 'aḳl from the other side. Owners are responsible for their animals, and those who cause them for accidents. There are many injuries for which no Diya is named and these cases must be referred to the Mudjtahid.

(T. H. Weir.)

DIYĀLĀ, one of the most important tributaries on the left bank of the Tigris. Its sources lie in the centre of the Persian province of Ardilān (see above, p. 427). The main stream (called at first the Gabe or Gāwū-rūd), rises to the west of Asadābādh in 34° 50′ N. Lat. (the latitude of Hamadhān) and at first flows to the northwest. A little above the 35° N. Lat. it is joined from the north by the Āb-i Shīrwān which takes its name from a place named Shīrwān, and rises in the hills southeast of Siḥna (Sinna); thenceforth the latter is the name almost exclusively used for the Diyālā. After bending to the southwest the river again resumes its previous northwesterly course and is joined at its furthest north point by the river of Derūd which flows from the Zaribār (Zaribūr) Lake to the south. Its confluence with the latter has a decided effect on the future course of the Diyālā, for its originally northwestern direction is changed to a southwestern and ultimately becomes almost direct south. The Diyālā, the whole of the upper course of which has hitherto been confined between high mountain walls, now enters a long, high-lying valley, which ends in the narrow ravine of Darna; here it receives on the left the waters of an important tributary, the Zamakān (Zamakān-rūd). The latter is made up of little streams rising in the Karind district. The upper valley of the Diyālā may be said to end at the mouth of the Zamakān; its middle course which likewise for the most part flows through a mountainous country ends where it breaks through the Djebel Ḥamrīn.

The Diyālā next rushes through the broad valley of Shamīrān, in which it is further increased by the Tandj (or Tādj)-rūd (whose source lies above Sulaimāniya), which flows from the north through Shahrizōr; it next flows through the western Zagros ranges. A few hours' journey above the mouth of the Zamakān, it begins to form the present boundary between Turkey and Persia and continues to be the frontier till it reaches 34° 30′ N. Lat. At Zangābādh the Diyālā is joined by the Ḥulwān. The latter rises south of Karind and takes its name from the once important Babylonian frontier town of Ḥulwān [q. v.]. Soon after passing Ḳizilrobāṭ [see DJALŪLĀ] the Diyālā breaks through the Djebel Ḥamrīn and enters the Babylonian plains through which it sinks with sluggish course almost imperceptibly to the Tigris, with which the last 80 miles of its course is almost parallel. It is only on the lower parts of its course beginning at Ḳizilrobāṭ that the Diyālā is called by this name by the people on its banks; above Ḳizilrobāṭ it is known only as the Shīrwān-rūd. Although in Babylonia a vast amount of water is taken from the Diyālā for irrigation purposes, when it flows into the Tigris it is still more than half as large as the latter owing to the plentiful supplies it receives from the abundant mountain streams of its upper and middle courses. The place where it joins the Tigris, in 33° 15′ N. Lat. 5 hours' journey below Baghdād (according to the Arab geographers: 3 parasangs = 12 miles), and about halfway between Baghdād and the ruins of Ctesiphon, is, according to Chiha (*La Province de Bagdade*, Cairo, 1908, p. 88), called al-Makhlāṭ "the commingling". A short distance above this point there is a bridge of boats across the Diyālā.

After its entrance into the Babylonian plains the Diyālā from the earliest times has been extensively used for irrigating the surrounding districts; canals and dams were built to regulate its flow and to prevent devastating inundations. This irrigation system was at its best in the 'Abbāsid period. After the Mongol period the canals and dams gradually fell into disrepair; the inevitable result was that many fertile stretches of land became desert and swamps (*hōrs*) sprang up in places. Even at the present day no decided improvement has yet been made.

The Diyālā is connected with its neighbouring Tigris tributary, the 'Aḍaim by two (or more?) canals, which however are usually dry except in the season when the snow smelts (cf. above, p. 125). The great Ḳāṭūl-Nahrawān Canal, which dated from the Sāsānid period, connected the Diyālā with the Tigris by numerous offshoots on both sides. This great waterway, which is now in many places choked with mud or quite dried up, but whose course may still be clearly recognised (according to Herzfeld's theory, it is a former bed of the Tigris), leaves the Tigris 5 miles below the modern Imām Dūr (north of Sāmarrā) and runs parallel to it as far as the district of Kūt al-'Amāra. The water still left in the Nahrawān returns to the Tigris at the point where it breaks up into the Shaṭṭ al-Ḥai and its eastern branch, the modern main arm. Besides Ḳāṭūl and Nahrawān, the names originally used for the upper and lower courses of this canal, we find the Arab authors also applying to a particular part of it the two names of the Diyālā familiar to them (Diyālā and Tāmarrā). This is explained by the fact that the Ḳāṭūl-Nahrawān below Ba'ḳūbā (see above, p. 610) ran for 20 miles along the bed of that river. The canal part of the Diyālā may still be traced from Bahriz (south of Ba'ḳūbā) to the ruins of Ṣifwah (N. N. E. of Baghdād); in recent times the river has however left its ancient bed and between Bahriz and Ṣifwah it flows in another channel from 1—2 miles west: cf. R. Kiepert's map (eastern sheet) in M. Frh. v. Oppenheim, *op. cit.*).

In the 'Abbāsid period the Diyālā also watered the suburbs of Baghdād on the eastern Tigris by two canals, Nahr Khāliṣ and Nahr Bīn, which in their turn by means of further smaller canals filled the streets of the Caliphs's capital with a network of small waterways.

The name al-Khāliṣ has survived to the present day as that of one of the Diyālā canals; but the mediaeval and the modern Khāliṣ are two quite different watercourses. The former leaves the Diyālā at Bādjisrā [q. v., p. 558] and after a comparatively short course falls into the Tigris a little to the west of Baradān [q. v., p. 652] and about 4 hours' journey below Baghdād. The modern Khāliṣ canal, on the other hand, is of recent origin and has a much longer course. It leaves the Diyālā some distance east of Dali 'Abbās and runs in a southwestwardly direction to the Tigris which it reaches at al-Djudēda (in 33° 41′ N. Lat.). This modern Khāliṣ is by far the most important canal flowing from the Diyālā in Babylonia. The district watered by it and its numerous arms is at the present day one of the most intensively cultivated areas of the Wilāyet of Baghdād. In dry years the water left in the Khāliṣ is not sufficient to reach the Tigris but disappears in a swampy delta near Djudēda.

The whole valley of the Diyālā still contains many traces of its antiquity as a settled area; its banks, in particular, as well as those of its tributaries (especially the Shirwān- and Ḥulwān-rūd) are thickly covered with ruins of the Sāsānid period, most of which still await a more careful, scientific exploration. The ancient high road from Baghdād to the Irānian highlands (to Hamadhān) runs up the Diyālā valley as far as the mouth of the Ḥulwān-rūd, from which it winds up the latter river as far as the famous "Zagri Portae". The climate on the lower course of the Diyālā is unhealthy; large quantities of rice are now grown there.

Of the two other names, Shirwān and Gaberūd, of the Diyālā, the former is found in a passage given by Yāḳūt (iv. 847) from Ḥamza al-Iṣfahānī's historical work. This says that the Diyālā which comes from the province of Ādharbaidjān also bears the Persian name Djurwān and the Syriac Tāmarrā. Djurwān undoubtedly corresponds to the modern Shirwān.

The etymology of Diyālā (Yāḳūt vocalises Dayālā) is quite unknown. The name dates from remote antiquity, as the reproductions of it by classical authors show (Σίλλα, Δέλας; Dialas is not quite certain as the correct reading may be Diabas = Zab). Tāmarra the name usually given it by the Arabs is probably still older; its prototype is the Syriac form Tōrmarā, which may be recognised in the Tornadotus of Pliny, the Θορνᾶ of Theophanes (whence the corrupt forms Corma in Tacitus and Δελᾶς in Zosimus?), the Ταύμαρρα of Zosimus (iii. 29) and the Turnat of the cuneiform inscriptions. Turnat appears as early as the inscriptions of Assurnāsirpal II. (III.) in the first half of the ixth century B. C. (but cf. also the article 'ADAIM, p. 125).

(M. STRECK.)

DIYĀR (A.) "Dwellings", plural of *Dār* "house" [q. v., p. 915], particularly common in the following compounds.

DIYĀR BAKR (Turkish pronunciation: Diyārbekir), formerly the name of a province, at the present day the name of the town of Āmid, the ancient Amida, called Ḳara-Āmid by the Turks on account of the black colour of its walls and buildings of basalt. It is the capital of the province of the same name and lies on the left bank of the Tigris, at a height of 2070 feet above sea-level; below it the river becomes navigable for the rafts made of inflated skins (*kelek*) which descend as far as Baghdād. The population is 35,000 of whom 20,142 are Muslims (4130 Kurds) and 15,560 Christians. Its walls, forming an irregular circle, are flanked by 72 round, square or octagonal towers, — including the citadel (*il-Ḳal'a*); they were built by Constantine and repaired by Justinian. There are four gates, in the west the Gate of Rūm or Aleppo, in the south the Gate of Mārdīn, in the north Dāgh-Ḳapū (Mountain Gate) or Gate of Kharput and the New Gate in the east; there are 28 large mosques, 12 churches and 130 public fountains. Its manufactures are morocco leather, silk and cotton stuffs, articles of copper, glass and earthenware and a very famous syrup called *sherbet-i khairīya*. 1½ miles down the river is a bridge of eleven arches.

The town was occupied without opposition by 'Iyāḍh b. Ghanm al-Fihrī in 19 (640) at the time of the conquest of Mesopotamia (al-Balādhurī, p. 176) in the caliphate of 'Omar; it was taken by the Ottomans in 921 (1515) after the battle of Čaldirān: Āmid had been retaken by the Greeks in 347 (958). After owning the sway of the Saldjūḳ Tutush, the town belonged to a dynasty descended from the Turkoman Ināl, whose ministers were the descendants of Abū 'Alī b. Nīsān. It was occupied by Ṣalāḥ al-Dīn (Muḥarram 579 = May 1183), who ceded it to his ally the Urtuḳid Nūr al-Dīn Muḥammad, whose successors strengthened the fortifications. Tīmūr won it by a stratagem; it next remained in the power of Ḳara-Yūsuf and the Aḳ-Ḳuyūnlū till the conquest of the country by the Ṣafawī Shāh Ismā'īl in 908 (1502), who appointed Ustādjlū-Oghlū governor. The rising of the Kurds and other native tribes against the Persians led the inhabitants of Diyār Bakr to declare for Sulṭān Selīm I; after being besieged for over a year by Ḳara-Khān, brother of Ustādjlū-Oghlū, they were relieved by Bīyiḳlū Muḥammad who took possession of the town in name of the Sulṭān.

The walls form a veritable epigraphical museum; on them are inscriptions of the 'Abbāsid Caliph Muḳtadir (297 = 909-910), of the Urtuḳid Muḥammad (579 = 1183), and of his son Malik Ṣāliḥ Maḥmūd (605 = 1208-1209).

Two streams water the citadel and the town; the first contains fish which are the objects of

particular veneration; the second called Hamrawat runs from the Kara-Dāgh in the south of the town. The banks of the Tigris are covered with gardens, which grow melons; the most beautiful is the Rīhān-Bāghī "garden of basil". Two tombs are venerated, that of Shahīd, son of Khālid b. al-Walīd, in the mosque of Khālid inside the citadel and that of the Persian historian Lārī (Munlā ʿAzīz Muṣliḥ al-Dīn), who was born at Lār in Persia, retired to a derwish monastery and is buried near Shaikh Rūmī (Ewliyā, *Siyāḥet-nāme*, iv. 53, 55).

(Cl. Huart.)

al-**DIYĀRBAKRĪ**, Ḥusain b. Muḥammad b. al-Ḥasan, born at Diyār Bakr, afterwards took up his abode in Mecca, where he became Ḳāḍī and died some time after 982 (1574).

He was a Ḥanbalī or Mālikī. Ḥādjdjī Khalīfa, who is followed by Wüstenfeld, says that Diyārbakrī, who completed his *Taʾrīkh al-Khamīs* on the 8th Shaʿbān 940 = 23rd February 1534, died in 966 = 1559. But as the various recensions of this work that have survived to us mention the accession of Sulṭān Murād III, which did not take place till 982 (1574), the author cannot have died before this year unless the appendix is the work of a copyist.

He wrote the following works:

I. *Taʾrīkh al-Khamīs fī aḥwāl anfasi nafīs* (var. Brockelmann: *nafs nafīs*; Ḥādjdjī Khalīfa and Huart: *al-nafs al-nafīs*), a biography of the Prophet in which the author, although very prolix, has endeavoured to weigh the various accounts, and to distinguish the good from the bad; the whole is followed by a short history of the Caliphs to the accession of Sulṭān Murād III. The work comprises 1. an introduction on the creation of the light (*nūr*) of the Prophet; 2. three *rukn* or foundations: *a*. events which took place between the birth and the mission of the Prophet; *b*. from the mission to the Hidjra; *c*. from the Hidjra to the death of the Prophet; 3. Conclusion; the four Caliphs, the Umaiyads, the ʿAbbāsids, and other dynasties to the accession of Sulṭān Murād III. It has been published in Cairo in 1283 and 1302 A. H.

Under the title *Geschichte der Tödtung des Chalifen Omar*, Otto von Platen published (Berlin, 1837) an extract from the *Taʾrīkh al-Khamīs* with a translation and a brief introduction in German, relating to the assassination of the second orthodox Caliph ʿOmar b. al-Khaṭṭāb.

In his *Ling. Arab. Grammatica*, (2nd ed., p. 43) Petermann gives a short extract relating to the Caliph ʿOmar who had his son ʿAbd al-Raḥmān whipped to death for having drunk wine in Egypt.

II. A minute description of the Kaʿba and the Holy Mosque, which survives in Ms. in Berlin No. 6069 and in the Khedivial Library, iii. 116.

Bibliography: Ḥādjdjī Khalīfa, iii. 177; F. Wüstenfeld, *Die Geschichtschreiber der Araber und ihre Werke* (Göttingen, 1882), n°. 526; Brockelmann, *Geschichte der Arabischen Litteratur* (Berlin, 1902), ii. 381; Cl. Huart, *Arabic Literature* (London, 1903), p. 376.

(Moh. Ben Cheneb.)

DIYĀR MUḌAR, the "dwellings of the tribe of Muḍar" in al-Djazīra = Mesopotamia, comprised the valley of the Euphrates from Sumaisāṭ to ʿĀna with al-Raḳḳa as their capital, and the lands on the Balīkh. See Le Strange, *The Lands of the Eastern Caliphate*, p. 86 *et seq.*, 101—108. For further information see the article Muḍar.

DIYĀR RABĪʿA, the "dwellings of the Rabīʿa" in Mesopotamia stretched along the Tigris from Tell Fāfān to Takrīt (capital al-Mawṣil) and comprised the valleys of Khabūr-Hirmās-Tharthār on the right, the lower course of the little Khābūr, the upper and lower Zāb on the left side of the main river. See Le Strange, *The Lands of the Eastern Caliphate*, p. 87 *et seq.* For further particulars see the article Rabīʿa.

DIZ (P. older form *dizh*, Avestan *daēza*), a fortress or citadel. Arab writers have handed down to us the name *Ḳuhandiz* "the old citadel" borne by the Sāsānian fortresses inside the towns of Khorāsān and Mā warāʾ al-Nahr (Samarḳand, Bukhārā, Balkh, Marw, Nīshāpūr, Herāt etc.). — *Dizdār*, the governor of a fortress. Aḥmad Wafīḳ Pasha claimed to be descended from a family of Bulgarian origin called Dizdār.

(Cl. Huart.)

DIZFŪL, the capital of Khūzistān, in 32° 25′ N. Lat. and 48° 35′ E. Long (Greenw.), on the bank of the Dizfūl-Rūd or Āb-i Diz, which takes its name from it. This river which rises in the Burūdjird district flows into the Kārūn a little below Band-i Ḳīr (ʿAskar Mukram; see above, p. 488). According to Herzfeld, Dizfūl (650 feet above sea-level) is built on conglomerate cliffs 60 feet high, the outermost spur thrust by the mountains into the Susian plains; the ruins of Susa begin about 15 miles to the southwest. Dizfūl (Pers. Dizpūl) = "Castle Bridge" takes its name from a fortress which was erected to protect the imposing bridge over the river there. The Arabs say this bridge was built by the Sāsānian king Shāpūr II; it was often repaired, at least in its arches, in course of time; Mustawfī (740 = 1340) speaks of 42 arches, the Persian writer ʿAlī of Yazd (828 = 1425) of 28 large and 27 small, 55 in all; at the present day (according to Loftus) there are 21 arches, which have been so often renovated that they practically show quite modern brickwork; only the piers of the bridge are undoubtedly ancient and may actually date from Sāsānian times. The town, which arose round the citadel at the bridge, is given various names by the older Arab geographers: Ḳaṣr al-Rūnāsh, Ḳanṭarat al-Rūm (= the Roman Bridge), Ḳanṭarat al-Rūd (= the River Bridge), Ḳanṭarat al-Zāb (Zāb repeatedly occurs as a river-name; Semitic root זוב "to flow"), also simply al-Ḳanṭara; the name Ḳanṭarat Andāmish (Andāmishk is the real ancient place-name) is also found; the Persian name Dizpūl is, as far as I am aware, first found in Yāḳūt.

The modern Dizfūl contains 34 mosques and about the same number of tombs of saints; the walls are in ruins. Sandstone appears to have been the chief material used for the dwelling-houses; the underground apartments (rooms in the cellars, *sardābs*) usual in Persian towns are also found here. The above mentioned conglomerate cliff and the high mound of ruins, on which the houses are built, is, as Herzfeld tells us, honeycombed with cellars and passages. The dwellinghouses and *sardābs* are quite in the style of Mosul buildings, according to this authority. The sanitary condition of the town is very bad; such a state of filth as is here is to be found in very few Oriental towns of any size.

Dizfūl is the busiest place in the province of Khūzistān. Two industries peculiar to it are the preparation of indigo and the dyeing of cloths with it as well as the preparation of felts. Indigo was first introduced in the early decades of the xix[th] century to this district; it soon began to flourish around the town and is now one of its main articles of commerce. The felts are made into carpets, horse-covers, outer garments and caps. The Lurs supply most of the raw wool. From Luristan also come (according to Herzfeld) resins, gums, tragacanth, gall-apples, hides and feathers. Dizfūl is also celebrated for its reed-pens, which are considered the best in the east and are exported great distances (even to Constantinople and India). The inexhaustible reed-beds in the marshes of the lower Euphrates and Tigris, the so-called Baṭīḥa [q. v., p. 675], supply the material for this industry. It is clear then from what has been said that in addition to considerable industrial activity, Dizfūl is the centre of a busy trade; it is carried on at present exclusively by the great avenue of traffic to Shūster (the second largest town in Khūzistān), as the caravan routes running to the N. and N. E. (Khurramābādh, Burūdjird) are now practically closed on account of their great insecurity. The chief imports are cotton stuffs, cloths, sugar and tea.

About the middle of last century, Loftus estimated the number of inhabitants at 15,000—18,000 Muslims and about 30 Mandaean families; on the latter cf. Petermann, *Reisen im Orient* (1861), ii. 455. Houtum-Schindler estimated the number in 1879 at 25,000, Well in 1883 at 20,000; Herzfeld (1907) c. 15,000, including Persians, Kurds, Lurs and Arabs; de Morgan's estimate (1800 inhabitants) seems obviously to be much too small. The inhabitants are inhospitable and fanatical; two thirds of them are Saiyids, i. e. alleged descendants of the Prophet, with whom Persia swarms everywhere. There are no Europeans or Christians. A Persian under-governor (Nā'ib al-Ḥukūma) lives in Dizfūl. A little above the town, likewise on the Āb-i Diz, is the village of Rūbund with a domed mosque, the external appearance of which reminds one strongly of the tomb of Daniel at Sūsa.

DJABAL, DJEBEL (A.) "Mountain", plural DJIBĀL [q. v.].

DJABALA, 1. A town on the Syrian coast south of Lādhiḳiya, the ancient Gabala. The town, which was fortified, was abandoned by its inhabitants when the Muslims conquered the coast-towns in the year 17; but Mu'āwiya had it peopled again and built a new citadel outside the old one. In 245 = 859, it suffered severely from an earthquake. When the Byzantines were gaining ground again in the x[th] century, they recaptured Djabala in 357 = 968 along with other neighbouring towns, on the death of the Ḥamdānid Saif al-Dawla; on this occasion 35,000 men, women and children are said to have been carried into captivity. In 473 = 1080 'Abd Allāh b. Manṣūr, the Ḳāḍī of Djabala, succeeded in driving out the Byzantines, and the town remained in the hands of the Muslims till the Crusaders took it in 1108. Idrīsī describes it during this period of Christian rule as a small, pretty and prosperous town. In 584 = 1189, it surrendered to Ṣalāḥ al-Dīn, whose son al-Afḍal afterwards gave it to his brother al-Ẓāhir. Khalīl describes it as a pretty town as late as the xv[th] century. But what later travellers most appreciated, was the tomb in Djabala of the famous saint Ibrāhīm b. Adham; the mosque dedicated to him, originally a church, still exists. For the rest, Djeble is now an unimportant village, in which some ruins of ancient buildings may still be found.

2. A long, red-coloured mountain ridge in Central Arabia, with a large ravine (*shi'b*), through which alone access to the mountains is possible. On Doughty's map it is given as Gabilly. According to the Arab geographers, it had al-Shuraif on the east, the waters of which belonged to the Banū Numair, and on the west, al-Sharaf, the waters of which belonged to the Banū Kilāb. The ravine itself was inhabited by a branch of the Badjīla, the 'Uraina. It was five days' journey from Hadjr in Yamāma. A battle took place before Islām in this ravine, which the Arabs number with those of Kulāb and Dhū Ḳār among the greatest of battles. An unusually large number of Arab tribes took part in it. On one

side were the Banū ʿĀmir [q. v.], with whom the ʿAbs amongst others had allied themselves; on the other side were practically all the Tamīm under the leadership of Laḳīṭ b. Zurāra, the Dhubyān and Asad, reinforcements from Ḥīra led by the step-brother of the reigning king and a number of Kindīs under the "two Djawna", two members of the Kindī ruling family which then ruled in Baḥrain. In spite of their great superiority in numbers the Tamīm and their allies who, it appears from a remark of the poet Labīd, relied too much on one another, were utterly defeated. The prince Laḳīṭ fell, while Ḥādjib, one of his brothers, was taken prisoner and afterwards ransomed for a huge sum. This defeat shattered the last remnants of the power of the Kindīs in Central Arabia; one of their leaders also fell in the battle. The statements regarding the date of this battle are, as usual, contradictory and uncertain. According to some the battle took place 17 or 19 years before the birth of the Prophet, while others say it was fought in the year of his birth. Caussin de Perceval places it a few years later and this must be the correct date if the king of Ḥīra who sent reinforcements, was, as is said, Nuʿmān b. Mundhir; for his reign did not begin till about 580.

DJAʿBAR, also Ḳalʿat Djaʿbar, a ruined fortress on the left bank of the central course of the Euphrates, almost opposite Ṣiffīn. The place, called Dausara in pre- and early Islāmic times, τὰ Δαυσάρων (see Pauly-Wissowa, iv. 2234), and Dawsar in Arabic, is mentioned by the older Arab geographers as a station on the road from Raḳḳa to Bālis (cf. Ibn Khurdādhbih, p. 74; Ṭabarī, iii. 220). In the Mamlūk period a post-road from Ḥimṣ *via* Salamya, Bughaidīd, and Sūriyā (= ʾIsriya) to Raʾs al-ʿAin, crossed the Euphrates here.

An Arab tradition, which has no historical basis, derives the old name from Dawsar, a slave of al-Nuʿmān b. al-Mundhir. The castle is said to have received its later name from a Ḳushairī Sābiḳ al-Dīn Djaʿbar, who seized it in the Saldjūḳ period; his sons were highway robbers here till Malikshāh b. Alp Arslān took the fortress and gave it to the last ʿUḳailid of Ḥalab, Sālim, in compensation for the loss of his previous possessions (479 = 1086-1087). It remained in the hands of his descendants, apart from a temporary occupation by the Franks, till 564 = 1168-1169, when the ʿUḳailid Shihāb al-Dīn Mālik had to give it up to Nūr al-Dīn Maḥmūd b. Zangī. Benjamin of Tudela who passed Djaʿbar about this time makes the remarkable statement that there were 2000 Jews in it. In Yāḳūt's time it belonged to the Aiyūbid al-Ḥāfiẓ b. al-ʿĀdil. Sulaimān, the grandfather of the founder of the Ottoman dynasty, was drowned here in 1231 (v. Hammer, *Osm. Reich.*, i. 41). In the Mamlūk period the administrative position of Djaʿbar varied; it was for a time attached to Damascus but afterwards belonged to Ḥalab. Abu ʾl-Fidā says that in his time the castle was in ruins; it was however rebuilt at the end of the reign of Muḥammad al-Nāṣir b. Kalāʾūn.

At the present day a Beduin tribe, the Wild, encamps in summer around the ruined but still imposing fortress.

DJABARĪYA is the name given in the history of the sects to those, who in opposition to the Ḳadarīya deny the freedom of the will, and on this point make no distinction between man and inanimate nature, in as much as his actions are subordinate to the compulsion (*djabr*) of God. The most prominent champion of this view is Djahm b. Ṣafwān [q. v.]; the Nadjdjārīya, Ḍirārīya, Kullābīya and Bakrīya are also considered Djabarīya. Muʿtazila writers however also charge the orthodox Ashʿarīya with being Djabarīya, which, as Shahrastānī rightly points out, is not strictly correct as, although they deny the freedom of the will, they allow that man has some influence on action (*kasb*, appropriation).

DJABART, originally the name of the Muḥammadan people of Ifāt (in Shoa), is now applied to the whole Muḥammadan population of Abyssinia. An individual is called Djabartī. This *nisba* is not found in Suyūṭī's *Lubb al-Lubāb* (ed. Veth, Leyden 1840). According to Abyssinian tradition the name is derived from the Ethiopic *agbert* (plural of *gabr*) "servants (of God)". The name given in Amharic by the Christians of Abyssinia to a Muḥammadan is *islam* (plur. *islāmōč*).

The Djabartīs are not distinguished by dress or language from other Abyssinians. They speak the language of the country, but in their schools Arabic is also studied, as far as it is necessary for the interpretation of the Ḳurʾān and religious literature. The Djabartīs form a division by themselves at the Azhar Mosque in Cairo. A considerable number of Arab scholars of earlier days, who were descended from the Djabartīs and bear this name, are given by Djabartī in his *Taʾrīkh* (Bulāḳ, 1297), i. p. 385 *et seq.*

AL-**DJABARTĪ**, ʿABD AL-RAḤMĀN B. ḤASAN, AL-ḤANAFĪ, was born at Cairo 1168 A. H. (= 1754 A. D.) of an Abyssinian family from Djabart, which had been settled in Cairo for seven generations. It was a family of scholars and had furnished a series of heads to the Riwāḳ of Djabart in the Azhar, the greatest of whom appears to have been the father of our Djabartī. He had the distinction of being the last to teach astronomy in the Azhar. For the family history, see Djabartī himself in his *ʿAdjāʾib* (Anno 1188; i, pp. 386—408 in ed. of 1297) and the abstract in *Khiṭaṭ djadīda*, viii, pp. 7—15; for the Riwāḳ of Djabart, *Khiṭ. djad.*, iv, p. 23. ʿAbd al-Raḥmān carried on the family tradition. He was a distinguished member of the ʿUlamāʾ of Cairo, a contemporary of the last Mamlūk Beys, a watchful eyewitness of the French occupation and a keen, if silent, critic of the first seventeen years of Muḥammad ʿAlī's rule. Napoleon appointed him a member of the Grand Divan of notables by which he endeavoured to govern Egypt. In his last years he was fixer (*muwaḳḳit*) of the hours of prayer and of the beginning and end of Ramaḍān in the household of Muḥammad ʿAlī. On the night of Ramaḍān 27th, 1237 A. H. (= June 22nd, 1822 A. D.) he was murdered on the Shubra Road when returning to Cairo. The responsibility for this has always been charged to Muḥammad ʿAlī, who had gained some knowledge of his attitude in his *ʿAdjāʾib al-āthār fi-'l-tarādjim wa'l-akhbār*, the great history of Egypt in the 12th and 13th Moslem centuries which he was writing. It is certain that the printing of it was long prohibited and that it reached publication only in 1297 (1879-1880). An earlier edition was confiscated and destroyed. Even the French translation by Egyptian scholars has been left unfinished (Cairo, 1888—1894); the fourth volume, covering A. H. 1221 to Dhu 'l-Ḥidjdja 1236 and dealing with the reign of Muḥammad ʿAlī, remains in Arabic. His book is partly a chronicle and partly a necrology. As a detailed picture of oriental life it is of high sociological value and Lane made use of it for that purpose in the notes to his *Arabian Nights*. After some introductory matter its annals begin with the year 1099 of the Hidjra. Up to 1170 the author had to trust the memories of old men, public records and inscriptions on tombs. From 1170 on he professed — a precocious infant! — to have his own recollections. With 1190 he had begun to keep full notes of events, and his book has the value of a contemporary diary. Of his independence of judgment there can be no doubt. He came of a scientific family and knew himself the value of accuracy and of the immediate record. He had thrown in his lot with the French, and later with Muḥammad ʿAlī, but in both cases with an open, critical mind. Another detailed diary of the French occupation (*Maẓhar al-taḳdīs*) is still unprinted in Arabic, but has appeared in Turkish, and in an imperfect (so von Kremer, *Egypten*, ii, p. 326) French version by Cardin. We owe to him also the Arabic translation of Murādī's *Silk al-Durar* (Brockelmann, ii, p. 294), which may have suggested the obituary element in his own *ʿAdjāʾib*, and an abstract of Dāʾūd al-Anṭākī's *Tadhkira* (Brockelmann, ii, p. 364). For exact references on all these, see Brockelmann, ii, p. 480. Lane tells us in his *Arabian Nights* (chap. i, note 19) that al-Djabartī constructed for his own entertainment a recension of the *Arabian Nights*, now apparently lost. His father, also, had been interested in popular tales and songs (*Khiṭ. djad.*, viii, p. 11, ll. 3 *et seq.*).

Bibliography: Besides references above, *Merveilles biogr. et hist. du Shaikh .... el-Djabarti* (Le Caire, 1888) — *Notice sur la vie . . . de l'auteur*; Lane, *Modern Egyptians*, index sub *ʿAbd er-Raḥmān*; von Kremer, *Beiträge zur arab. Lexicographie* (Wien, 1883-1884), treats lexicography of *ʿAdjāʾib*. (D. B. MACDONALD.)

DJABARŪT, a technical term used by the neo-Platonic philosophers and more particularly by those mystics who are devoted to the illuminative philosophy (*al-ishrāḳ*). The form of the word is not Arabic; it is analogous to that of the word *malakūt* which is similarly employed and is Hebrew. *Djabarūt* has the same meaning as the Hebrew *gebūrah*, power. The world of *djabarūt* (*ʿālam al-djabarūt*) is that of divine omnipotence; it is like the world of *malakūt* (*ʿālam al-malakūt*) or divine authority, a region above that of earthly things and also above that of real individual things, which corresponds to some extent with the Platonic world of Ideas. The meaning of the word however varies according to the authors who employ it. The world of Djabarūt (*ʿālam al-dj.*) has been defined by several authors as the "middle world", i. e. the world intermediate between that of Divine Being (*al-lāhūt*) which is above and that of Authority (*al-malakūt*) which is below, cf. the glossary entitled *Iṣṭilāḥāt al-Ṣūfīya al-wārida fi 'l-Futūḥāt al-Makkiya*, printed at the end of Djurdjānī's *Taʿrīfāt*.

In Suhrawardī Maḳtūl, a neo-Platonic philosopher put to death for his heterodox opinions in 587 A. H., the World of Power (*djabarūt*) is that which the sages see in their ecstasies. "It is possible", he says "that they shall see the Light expanding throughout the world of Power, as well as the beings of the world of Authority whom Hermes and Plato saw".

In the Turkish dictionary entitled *Maʿrifet-Nāmah*, there is a diagram illustrating the totality of the worlds. In it the world of *djabarūt* lies between the divine throne (*kursī*) which is below and the Tabernacle (*ʿarsh*) which is above it. Below the throne lies the world of authority (*malakūt*); these two worlds have below them the mortal worlds including Paradise.

According to the opinion of the Ṣūfī ʿAbd al-Razzāḳ al-Kāshānī (died 730 = 1329-1330), to whom we owe an interesting treatise on Fate, the world of *djabarūt* is the place of *ḳaḍāʾ*, i. e. of divine determination. It is the world of pure spirit which is above the world of soul. The author here gives the word *djabarūt* the meaning of "compulsion". The general forms of things existing in that world in a certain measure impose upon the individual realisations in the lower world a part of their perfections. This idea of a constraining force is also found in the illuminative philosophy, where it is stated that the "victorious light" conquers darkness. Ibn Gebirol's philosophy is similar (see S. Karppe, *Étude sur les Origines et la Nature du Zohar*, Paris 1911, p. 177—179).

AL-**DJABBĀR**, "the Giant" was the name given by the Arab astronomers to the constellation of Orion, who was depicted in Greek mythology as a mighty hunter and giant. The older name of this constellation among the Arabs, before they became acquainted with Greek astronomy, was *al-Djauzā'*, which originally may have been given only to the three bright stars in the girdle (from *djauz* = kernel, nut, centre). The majority of Arab astronomers also call the two brightest stars of Orion, *Mankib* or *Yad al-Djauzā'* (= Beteigeuze, q. v., p. 709) and *Ridjl al-Djauzā'* (= Rigel, q. v.), although they call the whole constellation al-Djabbār.

DJABBUL, a town in Central Babylonia, on the east bank of the Tigris, a few hours' journey above Kūt al-'Amāra, and 5 parasangs (= c. 20 miles) southeast of Nu'māniya (the modern Tell Na'mān). It is described as a flourishing place by the older Arab geographers; but, by Yāḳūt's time (the beginning of the vii[th] = xiii[th] century), it had considerably declined. In course of time — we have no details of its decay — it fell utterly into ruins. This town must date from a very remote period; for the name of the Gambūlu, one of the most important Aramaic nomad tribes, frequently mentioned in the first thousand years B. C., must have survived in Djabbul; they have left traces of their influence in modern topography in several other places. The ruins of Djabbul which were known by the name Djumbul, Djanbal or Djenbil as late as the first half of the xix[th] century according to the travellers Rich, Chesney and Jones, have now utterly disappeared owing to earthquakes. On the site where Chesney in 1833 had seen the ruins of a large town, no trace of them was to be seen in 1848 when Jones passed it; the Tigris had in the interval entirely engulfed the remains of the town.

AL-**DJABBŪL**, the ancient GABBULA, a place E., S., E. of Ḥalab, celebrated for its Mallāḥa or Sabkha watered by the Nahr al-Dhahab [see above, p. 806]. The salt-mines there lent Djabbūl a certain economic importance in the middle ages as they still do, to which it probably also owed its position as an administrative centre in the political division of the Mamlūk kingdom.

DJĀBIR B. AFLAḤ ABŪ MUḤAMMAD, is the Astronomer *Geber* of the middle ages; he was often confused with the alchemist *Geber*, whose full name was Abū 'Abd Allāh Djābir b. Ḥaiyān al-Ṣūfī (see the next article). He belonged to Seville; the period in which he flourished cannot certainly be determined, but from the fact that his son was personally acquainted with Maimonides (d. 1204), it may be concluded that he died towards the middle of the xii[th] century. He wrote an astronomical work which still survives under two different titles; in the Escurial Ms. it is called *Kitāb al-Hai'a* (the Book of Astronomy), in the Berlin copy it is entitled *Iṣlāḥ al-Madjisṭī* (correction of the Almageste). In it he sharply criticises certain views held by Ptolemy; particularly rightly when he asserts that the lower planets, Mercury and Venus, have no visible parallaxes, although he himself gives the sun a parallax of about 3', and that these planets are nearer the earth than the sun. The book is otherwise noteworthy for prefacing the astronomical part with a special chapter on trigonometry (cf. the article ABU 'L-WAFĀ', p. 112). In his spherical trigonometry, he takes the "rule of the four magnitudes" as the foundation for the derivation of his formulae, and gives for the first time the fifth main formula for the right angled triangle (cos A = cos a. sin B). In plane trigonometry he proceeds after the manner of Ptolemy, i. e. he solves his problems with the aid of the whole chord, instead of the trigonometrical functions, sine and cosine. The work was translated into Latin by Gerhard of Cremona and this translation was published by Petrus Apianus in Nürnberg in 1534 under the title: *Gebri filii Affla Hispalensis de astronomia libri ix. in quibus Ptolemaeum, alioqui doctissimum, emendavit* etc. — Whether a Hebrew work described by M. Steinschneider, *Sefer ha-tamar*, which treats of secret sciences, is a translation of a work by Djābir b. Aflaḥ, is doubtful; besides the author is called not Ibn Aflaḥ but Abū Aflaḥ al-Saraḳosṭī.

DJĀBIR B. ḤAIYĀN, whose full name was ABŪ MŪSĀ DJĀBIR B. ḤAIYĀN AL-AZDĪ, a famous Arab alchemist, known in the Christian middle ages as GEBER, his *nisba* is sometimes given as Ṭūsī and sometimes as Ṭarṭūsī. He is said to have been Ṣābī whence his name al-Ḥarrānī, which is found once, to have early become a convert to Islām and to have shown great enthusiasm for this new religion; the name al-Ṣūfī dates from a later period.

His teachers were Khālid b. Yazīd b. Mu'āwiya (d. 85 = 704), on which account he is also called

al-Umawī the "Umaiyad", and Dja'far al-Ṣādiḳ [q. v.]. This is the story given by some authorities; in reality however he must have lived somewhat later than Khālid b. Yazīd so that he more probably flourished about 160 = 776. The *Fihrist* and Ḥādjdjī Khalīfa connect him with the Barmakids. Of his life we really know nothing; according to the most reliable tradition he spent most of it in Kūfa. A view, given in the *Fihrist* (p. 354 *et seq.*), that he never lived at all but is only a mythical personage, may be dismissed at once.

A large number of works have been attributed to Geber. Those that exist in Latin if we except the *Book of the Seventy* by Io (John) do not correspond to the Arab works and in general they represent a more advanced stage of alchemic science. Our libraries contain 22 Arabic treatises bearing Djābir's name; five of them have been published; viz. *The Book of the Kingdom* (*Kitāb al-Mulk*), the *Little Book of Balances* (*Kitāb al-Mawāzīn al-Ṣaghīr*), the *Book of Mercy* (*Kitāb al-Raḥma*), revised by a pupil, the *Book of Concentration* (*K. al-Tadjmī'*) and the *Book of Eastern Mercury* (*K. al-Zībaḳ al-Sharḳī*).

The doctrine contained in these works — and in the *Book of Mercy* especially, the authenticity of which is most certain, — is very anthropomorphic, or, if the term be preferred, very animistic. Metal is considered a living being; it develops in the bosom of the earth for a long period, — thousands of years, — passing from the state of an imperfect metal like lead to that of a perfect like gold. The aim of alchemy is to accelerate this transformation. The ideas of generation, marriage, impregnation and education are applied to metal; so also are the ideas of life and death; coarse and earthly substances are called "dead" in contrast to light and subtle substances which are called "living". Every chemical body has a soul and a body, a spiritual part and a material part. The work of the alchemist is to separate and refine the one from the other and then to give each body the spirit which suits it.

Western tradition has attributed important discoveries in chemistry to Geber, namely of aqua regia, sulphuric acid, nitric acid and nitrate of silver; but none of these discoveries is mentioned in the Arabic works which bear his name; they do not appear till the Latin works of the end of the xiii^th^ century. The estimation in which the Christian middle ages held Oriental alchemy is therefore not based on definite facts which we can check.

Litt.*, i. 240 *et seq.*; Carra de Vaux, article *Alchemy* in the *Encyclopaedia of Religion and Ethics* (Edinburgh, 1908). (B. Carra de Vaux.)

DJĀBIYA, the principal residence of the Djafnid Amīrs of Ghassān, whence called "Djābiya of the Kings", in Djawlān, a day's journey S. E. of Damascus. It covered several small hills, whence perhaps is derived the poetical form Djawābī of the plural, with an allusion to the etymological meaning of "reservoir", as a metaphor for generosity, (cf. Miskīn al-Dārimī, *Aghānī*, xviii. 72, 5). It was the perfect type of the ancient *Ḥīrtha*, the *Ḥīra* of the Beduins, of the *bādiya*, a large encampment, a collection of dwellings, half nomad and half sedentary, a confused mass of tents and buildings, among the latter a Christian monastery. It had a plentiful water-supply and abundance of excellent pastures around it, which are still visited by the Beduins of the Syrian desert. The gate in Damascus leading towards it was called *Bāb al-Djābiya*; it had three entrances like the present gate of Bāb Sharḳī. Idrīsī took Djābiya to be one of the ancient names of Damascus.

The Arab conquest further increased its importance. A large camp was early established there, the principal in all Syria and for long the headquarters of the *djund* of Damascus. As a military centre, during the Sufyānid period it eclipsed the Syrian metropolis itself. The name of Djābiya has been given to the battle of Yarmūk; there was a partial engagement with the Byzantines here and here also the spoils were collected after the battle. This explains why the Caliph 'Omar came here in the year 17 to settle the position of the new conquests, accompanied by the principal Ṣaḥābīs of the Ḥidjāz with the exception of 'Alī. It was a triumphal march, the first great demonstration of Arab imperialism. A parliament was held here, at which all the generals and principal officers of the Syrian troops were present. It has became celebrated as the "Day of Djābiya". The sermon delivered by 'Omar is likewise called *Khuṭba Djābiya*. The Ḥadīth constantly refers to it as an important document; it was a claim to fame to have been present at it. The importance of this meeting really surpassed that which tradition has given it. In all probability it was on this occasion that the Dīwān was instituted or the system of regular allowances. From these donations it was at first proposed to exclude the Arab tribes, natives of Syria, who had assisted the invaders of the Ḥidjāz, but their resistance caused this plan to fall through. As its climate was very healthy, Djābiya became the sanatorium for the troops who were being decimated by the plague of 'Amwās in Palestine on this side of Jordan. Henceforward the *'aṭā'* or largesse to the soldiers of the djund of Damascus were distributed here; the place early had a general mosque and a *minbar*, privileges which put it on the same footing as the *miṣrs* and chief towns of the djunds. It is easy to understand then why all the Umaiyad Caliphs after Mu'āwiya visited Djābiya. On returning from his winter residence at Sinnabra, 'Abd al-Malik used to spend a month there before returning to Damascus (*see* the article Djillīḳ).

When Ibn Zubair was proclaimed Caliph and had driven the Umaiyads from the Ḥidjāz, the Syrians assembled at Djābiya to choose a successor to Mu'āwiya II. Ibn Baḥdal was the first to arrive at the rendezvous with his Kalbites; Ḍaḥḥāk ibn Ḳais [q. v., p. 802], governor of Damascus, with the Ḳaisites was an absentee. In addition to the young sons of Yazīd I, the other Umaiyads were there and all the Arab chiefs of Syria. Ibn Baḥdal presided at the assembly (end of June to end of August 684). The various candidates were discussed; Yazīd I's children were ruled out of the question on account of their youth. Finally on the proposal of Rawḥ ibn Zanbā', chief of the Banū Djudhām, it was agreed to give the Caliphate to Marwān ibn al-Ḥakam. Khālid b. Yazīd I and next the Umaiyad 'Amr al-Ashdaḳ were to succeed him. The unity of the Umaiyad party was thus once more established and Djābiya became the

cradle of the Marwānid dynasty. Before marching against Ḍaḥḥāk b. Ḳais the new Caliph unfolded the banner of the Marwānids, which was ever after piously preserved by his successors. The victory of Mardj Rāhiṭ gave effectual sanction to the decisions come to at Djābiya.

The recognition of the two eldest sons of the Caliph ʿAbd al-Malik as heirs presumptive was the last great political event which had its scene at Djābiya. The expeditions against Constantinople begun in the reign of Sulaimān caused the transportation of the great military camp of Djābiya to Dābiḳ, to the north of Aleppo. Djābiya continued to be the chief town of a district dependent on Damascus. Its importance continued to diminish, particularly under the ʿAbbāsids, who hated everything associated with the Umaiyads and in proportion as the Arabs became accustomed to living in towns. Its name continued to live in the Ḥadīth. According to Ibn ʿAbbās, the souls of believers are to assemble at Djābiya and those of the infidels in Ḥaḍramawt.

AL-**DJABR** WA 'L-MUḲĀBALA: this was the name given in the older mathematical works of the Arabs to the theory or rather the **method of solution of equations of the first and second degree**; it may be best translated "Restoration and Comparison (or Equation)". Arabic writers themselves are not quite agreed on the meaning of these terms; but most of them agree with the following definition which is succinctly given by Bahāʾ al-Dīn al-ʿĀmilī [q. v., p. 327] in his *Khulāṣat al-Ḥisāb* (Essence of Arithmetic, ed. in Arabic and German by Nesselmann, Berlin 1843, p. 41-42 of the Arabic text and 41 of the translation): "The side which contains a negative term, is made perfect again and a quantity equal to that (term) added to the other side, this is *al-Djabr*; the same or similar terms on both sides are taken away, this is *al-Muḳābala*". Example:

From $5x^2 - 6x + 2 = 4x^2 + 7$ by applying *al-Djabr* we get:

$$5x^2 + 2 = 4x^2 + 6x + 7$$

from this by applying *al-Muḳābala*:

$$x^2 = 6x + 5.$$

The second operation is an obvious one to us; to understand the first it must be remembered that the Arabs, unlike the Hindus, do not allow negative terms in an equation; the conception of the negative was still strange to the Arabs; therefore when an equation contained negative terms, it was not in order, it was imperfect, and had therefore first to be arranged, then restored (*djabara*). But an equation with fractional coefficients in the highest term was also not in order, not properly arranged for solution, the fraction had therefore to be removed; the equation

$$\tfrac{1}{3}x^2 + 2x = 9$$

had therefore to be multiplied by 3 so that the first term may be only x^2 and it therefore becomes:

$$x^2 + 6x = 27.$$

Abū Bakr al-Karkhī (c. 1000) rightly considered this operation also to be *al-Djabr* (cf. the *Kāfī fi 'l-Ḥisāb* of Abū Bakr Muḥammad b. al-Ḥusain al-Karkhī, transl. by A. Hochheim, Halle a/S., 1878—1880, Part iii. p. 13). In later works, e. g. the *Arithmetic* of Abū Zakariyā al-Ḥaṣṣār (before 1200) (cf. Suter in *Bibl. Math.*, vol. 2 (3rd Ser.), 1901, p. 12—40), and in those of Taḳī al-Dīn al-Ḥanbalī (before 1410) and of Ibn al-Hāʾim (d. 1412). In addition to the term *al-Djabr* used in the above sense we also find *al-Ḥaṭṭ* (reduction), in the sense that for example the equation

$$3x^2 + 2x = 5$$

by application of *al-Ḥaṭṭ*, i. e. by division by 3 becomes the equation

$$x^2 + \tfrac{2}{3}x = \tfrac{5}{3}.$$

Carra de Vaux (*Bibl. Mathem.*, Vol. xi. (2nd Ser.) 1897, p. 1—2) is however wrong in thinking that *al-Ḥaṭṭ* is an older name for the second operation and was in time replaced by *al-Muḳābala*; *al-Ḥaṭṭ* has no connection with *al-Muḳābala*, but is a simple extension of the notion of *al-Djabr*, which is not at all necessary.

In course of time the second term *Muḳābala* gradually fell into disuse and, contrary to Nesselmann's view (*Algebra der Griechen*, Berlin, 1842, p. 45), this happened with the Arab mathematicians themselves: Abū Zakariyā al-Ḥaṣṣār in his treatise on Arithmetic used only the word *al-Djabr* throughout. This name passed from the Arabs to the West; In Leonardo di Pisa's *Liber Abaci* (1202) we find the untranslated words *algebra et almucabala*, but immediately followed by the translation *restauratio et oppositio*. Canacci of Florence (xivth century) is the first western writer to use *algebra* alone; *almucabala* is last found in the *Algebra* of Gosselin (1577). The former is also said to be the originator of the statement that *algebra* was derived from the name of the Arab scholar Geber (Djābir); whether he meant the alchemist Geber or the Spanish astronomer of the same name, cannot now be ascertained; Michal Stifel in his *Arithmetica Integra* also uses the expression *regula Gebri*.

But European scholars gave new names also to this science; in Italy arose the expressions, *ars magna*, *ars rei et census* (a translation of the words *shaiʾ* (x) and *māl* (x^2)) for which the corresponding Italian *arte maggiore* and *arte* (or *regola*) *della cosa* afterwards came into use. The latter name also passed into German, in the xvith and xviith century Algebra was almost regularly known as *Regel Coss* or simply *die Coss*.

The oldest Arabic work on algebra, known to us, was composed by Muḥammad b. Mūsā al-

Kh^w^ārizmī in the time of the Caliph al-Maʾmūn (ed. Rosen, Arabic and Engl., London 1831); as the terms *al-Djabr* and *al-Muḳābala* are not explained in them, it must be assumed that their meaning was already known and therefore that there must have been previous works on Algebra; whether the terms were invented by Arab mathematicians or were taken from Greek or Hindu works, has not yet been proved; in any case Diophant uses both of these operations in solving an equation in his arithmetical work and describes them in a similar way but gives them no special names; but on the other hand it is very improbable that Diophant had been translated into Arabic by the time of al-Maʾmūn; his first translator is said in the Arab authorities to have been Ḳusṭā b. Lūḳā (died c. 910).

Bibliography: On the Algebra of the Arabs in addition to the above mentioned works the following may be consulted: *Extrait du Fakhrī, traité d'Algèbre par Abou Bekr Mohammed b. Alhaçan Alkarkhī*, by F. Woepcke (Paris 1853); *L'Algèbre d'Omar Alkhayyāmī, publiée, traduite et accompagnée d'extraits de manuscrits inédits*, by F. Woepcke, 1851; *Traduction du Traité d'Arithmétique d'Aboul Haçan Alī b. Mohammed Alkalçādī*, by F. Woepcke (in the *Atti dell' accad. Pontif. de' Nuovi Lincei*, T. xii. 1859 and Extrait, Rome 1859). — The anonymous Algebra published by B. Boncompagni in the treatise: *Della vita e delle opere di Gherardo Cremonese*, etc. (*Atti dell' accad. Pontif. de' Nuovi Lincei*, T. iv. 1851, and Estratto, Roma 1851). — Cantor, *Vorlesungen über Geschichte d. Mathem.*, i. (2. ed.), 1894, p. 676—768. (H. SUTER.)

DJABRĀʾĪL, or Djibrīl, Gabriel, is the best known figure among the angels of Islām. He is one of the four archangels, one of angels favoured by or "brought near" (*muḳarrabūn*) God, and one of the divine messengers. His duty is to bear the orders of God to mortal prophets and to reveal his mysteries to them.

Gabriel plays an important part in the Ḳorʾān; Muḥammad applied the legend of this celestial messenger holding converse with the prophets to himself and believed that he had received his mission and the subject of his preaching from him. Gabriel's name only appears three times in the Ḳorʾān; but in other and important passages, a certain personage is designated by titles or epithets such as "the Spirit", "the Terrible" or even quite indirectly and the commentators unanimously recognise Gabriel in this personage. This identification is quite justified by a comparison of the different passages.

Let us begin with Sūra II, 91. "Say: Who is an enemy to Gabriel? for he hath revealed to thy heart, with God's permission, confirmation of what had been before and a guidance and glad tidings to believers". This verse explicitly states the part played by the archangel as revealer of the Ḳorʾān; it belongs, it is true, to a late Sūra; but it only reproduces another passage which is certainly early in which the inspiring angel is called "the Holy Spirit", (xvi. 104): "Say, the Holy Spirit brought it down from thy Lord in truth to establish those that believe and for guidance and glad tidings to them". Elsewhere in one of the most ancient Sūras, the same spirit is given the title of messenger, followed by a kind of doxology (lxxxi. 19—21): "The Ḳorʾān is the word of the noble Messenger, mighty, standing sure with the Lord of the throne, obeyed and faithful".

It is possible that Muḥammad did not at once give a name to the spirit with which he felt himself possessed, as the three passages, in which Gabriel's name appears, are late. In Sūra xcvi, which in all probability is connected with the first revelation of the spirit and the sort of crisis in which he received his mission, the angel is not designated by any name or title; the account, which is quite brief and perhaps mutilated, is impersonal: there it is said: "Preach, in the name of thy Lord who has created; .... preach, for thy Lord is most beneficent". According to tradition, this first revelation took place on Mount Ḥirāʾ near Mecca, whither Muḥammad had retired, and the voice is said to have added: "O Muḥammad, thou art the apostle of God, and I am Gabriel". But this may be only a later development, inspired by I. 19 of the Gospel of St. Luke, where the angel says to Zacharias: "I am Gabriel, that stand in the presence of God; and am sent to speak unto thee, and to shew thee these glad tidings".

It appears that as a rule Muḥammad heard the spirit but did not see him. Indeed there are verses in Sūra LIII (1—18) written with great vigour and a deep feeling of sincerity from which it is clear that he only saw him on two occasions: "It is one Mighty in power that has taught him; it is the Vigorous One; he hovered in the loftiest sphere, then he came down and remained suspended in the air. He was at a distance of two bows' length or nearer still; and he revealed to the servant of God, what he had to reveal to him .... he had already seen him in another vision near the lote tree that marks the boundary .... the lote tree was all covered". The minuteness of the details leave no room to doubt the sincerity of the visionary. Tradition adds that after this vision, Gabriel brought to the Prophet the mare or chimaera Burāḳ (q. v., p. 793).

Muḥammad apparently knew Gabriel from the Gospel account of the Annunciation; but he could not have been directly acquainted with this source. It is probable that he heard it from the mouth of some philosopher or religious inquirer, from some *ḥanīf*, to whom it had already come in a mutilated version. In his opinion God sent his Spirit to Mary in the figure of a very beautiful man (*Ḳorʾān*, XIX, 17); the spirit is not mentioned by name here; he told Mary that he had come to give her a son. In Sūra LXVI, 12, Muḥammad recognises that she retained her virginity and he makes God say "we breathed of our spirit into her". Tradition explains that Gabriel merely approached her and breathed upon her bosom; it was thus that she became pregnant.

The legend of the Archangel Gabriel is highly developed among the Muslims; this is soon noticed if one looks through works rich in legends, like the *Mukhtaṣar al-ʿAdjāʾib* (*Abrégé des Merveilles*, transl. Carra de Vaux) or the first volume of Ṭabarī's Persian *Chronicle* (transl. Zotenberg). There is scarcely a prophet to whom this celestial envoy has not brought help or revelations. Gabriel consoled Adam after the Fall and revealed to him twenty one leaves; he taught him the cultivation of wheat, the working of iron and the

letters of the alphabet; he took him to the site of Mecca where he taught him the rites of pilgrimage. It was Gabriel also who showed Noah how to build the Ark; he saved Abraham from the flames (cf. Sūra XXI, 69) and he had a good deal of further intercourse with this patriarch. He helped Moses to fight against the magicians of Egypt; at the Exodus he appeared on a horse with white feet to decide the Egyptians to enter the Red Sea which was to swallow them up. He appeared to Samuel, and to David to whom he taught the art of making coats-of-mail; he comforted this prophet and brought him leaves with ten riddles which Solomon solved. As in the Gospel, he came to Zacharias to announce the birth of St. John.

In the preparation of charms and talismans, Gabriel also plays an important part; his name frequently appears on the sides of magic squares, for example, along with those of the other Archangels, Michael, Azrāʾīl and Isrāfīl.

(B. CARRA DE VAUX.)

DJAʿDA (ʿĀMIR), a South Arabian tribe. Their territory, now ʿĀmir land, also called Shafel, lies to the west of the land of the Yāfiʿa [q. v.] and is for the most part mountainous. The soil is fertile in the north and produces dates with a little coffee and tobacco. The largest Wādī is the W. Nūra, into which flows the W. Ḍabāb. Near the latter lies the Djebel Arḍ Thawba, on which stand three ancient Ḥimyarite castles. The chief town is Dhalaʿ (also called Blad Shafel) with about 1000 inhabitants (including about 100 Jews), a large market and many palaces. The Sulṭān of the ʿĀmir resides here and in war can rely upon an army of 3000 men. The little territory of Shaheri is enclosed in the Djaʿda territory but is politically independent.

The Djaʿda are an ancient people. They are mentioned by Hamdānī in his *Djazīra*. He says of them that they speak bad Arabic; for example, they say *yā ibn maʿamm* for *yā ibn al-ʿamm*. Of hills which belonged to them, he mentions: Ḥiṣyar and Radafan; of castles: Shukuʿ and al-ʿUslum(?); of Wādīs: amongst others: al-Ḍabāb (which still exists), Dūrʿa or Dūraʿa, al-Djaʿdiyya, al-Ḥanaka, Khaḍir, Sharʿa (which still exists as a W. and as a village with about 100 inhabitants), ʿAmīḳ, Thawba, all of which flow into the Abian (Ibian). (The Wādīs given by Maltzan, *Reise nach Südarabien*, p. 358—360, from a bad manuscript of Hamdānī's *Djazīra*, are mostly wrong and are to be corrected from Müller's edition, p. 89, 14—18).

The geographer al-Bakrī also mentions settlements of the Djaʿda in the districts of Nadjrān. He mentions the hills Ural and Umn, the villages of Awḳ, Ḥunāna, al-Saḳhān(?), Nadjā(?) and the stream Habḥab.

According to Hamdānī the South Arabian Djaʿda belong to a small tribe of ʿAin al-Kabr, but as they are called Djaʿda, try to claim kinship with the greater North Arabian tribe of Djaʿda b. Kaʿb, as it is usual amongst the smaller tribes in Arabia to take the name of a larger tribe and then to trace their descent from them. But it is really very probable (as Sprenger, *Die alte Geographie Arabiens*, p. 272, note 1, also supposes) that in earlier times, a portion of the Djaʿda b. Kaʿb migrated from Yamāma to the not far distant Yemen and there incorporated other South Arabian elements, so that the Djaʿda in Yemen would really be descendants of the North Arabian tribe.

Sprenger, *Die alte Geographie Arabiens*, p. 73 (§ 84), 270 (§ 411).

(J. SCHLEIFER.)

DJAʿDA B. KAʿB, an Arab tribe belonging to the Maʿaddī (Ismāʿīlī) group. Their genealogy is: Djaʿda b. Kaʿb b. Rabīʿa b. ʿĀmir b. Ṣaʿṣaʿa b. Muʿāwiya b. Bakr b. Hawāzin. The Ḳushair and ʿUḳail were closely related tribes. The poet Nābigha (al-Djaʿdī) traces his descent from the Djaʿda b. Kaʿb.

They inhabited the district of Faladj in the territory of Yamāma. Of places, which belonged to them, there are mentioned, amongst others: Ukma (a large fortified town on the Wādī of the same name, with a much frequented market, many wells, bazaars and palaces and rich palmgroves), Ghalghal, Malaḥ, al-Ṣidāra and al-Thodjdja(?); of Wādīs and watering places: Aṭluḥā, al-Ghail (a large Wādī a day's journey in length with the town of the same name), ʿInān (jointly with the Ḳushair) and the two streams al-Aṭlas and al-Ruḳāda. Of castles there are mentioned: Murghim and Ḳaṣr ʿAdī.

The Djaʿda are said to have gone to the Prophet about a quarrel with the Djarm about the watering-place of al-ʿAḳīḳ, but he decided it in favour of the latter. In 126 (744), in alliance with the Kaʿb b. Rabīʿa, the ʿUḳail and Ḳushair, they slew the prefect of al-Faladj, the Ḥanīfī al-Mundalif b. Idrīs (the so-called Day of al-Faladj), whereupon the Ḥanīfa, 1000 strong, led by ʿAbd Allāh b. al-Nuʿmān, undertook a campaign of revenge against them and their allies and inflicted a severe defeat upon them (the so-called second Day of al-Faladj). On other battles (*Yawm ʿAlḳama*, *Y. Raḥraḥān*, *Y. Sharaḳīl*), cf. *K. al-Aghānī*, iv. 134—137, 139, 140.

Sprenger, *Die alte Geographie Arabiens* (Bern 1875), p. 233—235 (§ 363—365), 272 (§ 407).

(J. SCHLEIFER.)

DJADHĪMA, AL-ABRASH or AL-WADDĀḤ (i. e. the leper), a legendary Arab king, who founded an important kingdom on the lower Euphrates, including the towns of al-Ḥīra, al-Anbār etc., before the Lakhmid dynasty appeared in this territory. Traditions vary as to his relationship to the other rulers, who are mentioned in the pre-Lakhmid period, though the North Arabian legends are agreed that he was an Azdite. Stories of him are very popular and various Arabic proverbs refer to him. So proud was he that he

would only have two stars or idols (*al-Farḳadāni*, or *al-Ḍhaizanāni*, or *al-Ḍarīdāni*) as his boon-companions; but he later conferred this honour on two men, Mālik and 'Aḳīl, who had found and brought back his lost nephew, 'Amr b. 'Adī, his sister's son. His permission for the marriage of his sister with the Lakhmid 'Adī could only be obtained after he had been intoxicated — a favourite *motif*, which has even found a place in the biography of Muḥammad. He was ultimately enticed by the queen al-Zabbā' (Zenobia) to go to her and was slain by her.

It is, of course, impossible to sift the historical basis from this mass of legend. At most the contemporaneity with Zenobia may be considered genuine tradition, particularly as it agrees with the fact that the inscription of al-Namāra gives 328 A. D. as a certain date for Imrulḳais b. 'Amr, who, according to tradition, was a son of 'Amr b. 'Adī.

Guirgas), p. 56; Ibn al-Faḳīh in *Bibl. Geogr. Arab.*, v. 181; Ibn Rusta, ibid., vii. 192; Mas'ūdī, ibid., viii. 187, 202; do., *Prairies d'Or* (ed. Barbier de Meynard), iii. 181—194; *Kitāb al-Aghānī*, xiv. 72—76; Yāḳūt, *al-Mu'djam*, ii. 377; Caussin de Perceval, *Essai de l'Histoire des Arabes*, ii. 16—34; Rothstein, *Die Dynastie der Lakhmiden*, p. 38—40 (with further *Bibl.*); G. Jacob, *Altarabisches Beduinenleben*, 105. (FR. BUHL.)

DJADHĪMA B. 'ADĪ was the son of 'ADĪ B. AL-DU'IL B. BAKR B. 'ABD-MANĀT B. KINĀNA; but he is generally called DJADHĪMA B. 'ĀMIR B. 'ABD-MANĀT B. KINĀNA. The small tribe named after him was settled at al-Ghumaiṣā not far from Mecca, and is chiefly famous for the treacherous attack made upon it by Khālid b. al-Walīd in the eighth year of the Hidjra. Twenty years previously Khālid's uncle al-Fākih b. al-Mughīra had been robbed and killed by a party of Kināna. The matter had been settled and in the interval Djadhīma had professed Islām. Yet Khālid, being sent to them as a missionary, not with hostile intent, first induced them to lay down their arms and then proceeded to murder them in cold blood, in order to avenge the death of his uncle. When Muḥammad heard of it he professed to be greatly vexed, and paid compensation for the blood shed and for the property stolen.

Bibliography: Ṭabarī, i. 1649 *et seq.*; Ibn Hishām, p. 833 *et seq.*; Caussin de Perceval, *Essai*, iii. 242 *et seq.* (T. H. WEIR.)

DJADĪD (properly "the new"), a metre, which was unknown to the Arabs and was first invented by the Persians (whence the name). It had originally the form *fā'ilātun fā'ilātun mustaf'ilun* (twice). An abbreviated form *fā'ilātun fā'ilātun maf'ūlun* (twice) is also found.

Bibliography: Muḥammad A'lā, *Dictionary of Technical Terms* (ed. Sprenger etc.), i. 193. (A. SCHAADE.)

DJADĪS, one of the aboriginal tribes of Arabia: Ṭasm and Djadīs were the two sons of Lud son of Aram son of Shem son of Noah (*Kitāb al-Ma'ārif*), but according to another account Djadīs was the brother of Thamūd and son of 'Ābir son of Aram, whilst Ṭasm was brother of Amalek and son of Lud son of Shem (Ibn Hishām). Their country is said to have been invaded by the Tubba' Ibn al-Aḳran, but their extinction is ascribed to the Tubba' Ḥassān. Djadīs is said to have risen against Ṭasm who oppressed them. A man of Ṭasm who escaped appealed to Ḥassān, who exterminated Djadīs (*Kitāb al-Ma'ārif*, p. 308 *et seq.*). Thus both tribes were destroyed. Caussin de Perceval places these events about the year 250 A. D. (*Essai*, i. 100 *et seq.*). Two proverbs were coined in reference to this story — 'More keen-sighted than Zarḳā'' and 'More ill-omened than Kāshir' — Zarḳā, being a woman who warned Djadīs that the enemy were approaching, and Kāshir being the Ṭasmite who invoked the aid of the Tubba' (Maidānī, *Arab. Prov.*, i. 192; ii. 690). Djadhīma al-Abrash is said to have attacked Ṭasm and Djadīs before the expedition of Ḥassān (see Caussin de Perceval, *Essai*, ii. 26). Djadīs seems to be referred to by Ptolemy under the name 'Ιολισῖται or 'Ιοδισῖται, which would imply that they were still existent about the years 125—130 A. D. (*Op. cit.* i. 29). Djadīs, as the name of a sub-tribe of Lakhm b. 'Adī, is an error for Ḥadīs or Ḥadas (*Ḳāmūs*, *sub voc.*).

Bibliography: Ṭabarī, i. 771 *et seq.*; Ibn Ḳutaiba, *Kitāb al-Ma'ārif*, (ed. Wüstenfeld), p. 14; Ptolemy, *Geogr. Lib. viii.* (ed. Wilberg), p. 406; Caussin de Perceval, *Essai*, i. 28 *et seq.* (T. H. WEIR.)

DJADWAL (Pl. *djadāwil*) means firstly, "brook", "watercourse"; it further means "table, plan" (in this meaning derived from *schedula*?). It thus becomes a special technical term in sorcery, synonymous with *khātim*; here it means quadrangular or polygonal, sometimes also circular figures, into which names and signs possessing secret magic powers are inserted in the most varied fashion. These are usually certain mysterious characters, Arabic letters and numerals, magic words, the names of God, the angels and demons, as well as of the planets, the days of the week, and the elements, and lastly pieces from the Ḳor'ān, like the *Fātiḥa*, the *Sūrat Yāsīn*, the so-called "throne-verse" etc. The application of these figures is manifold; frequently the paper on which one has been drawn is burnt to smoke some one with its smoke; or the writing may be washed off in water and drunk; along with the *da'wa* (conjuration) and often also the *ḳasam* (oath) the *djadwal* forms the contents of a *ḥirz* (amulet). The very popular *da'wat al-Shams* is, for example, prepared as follows: it is quadrangular, is divided into 49 sections by six lines drawn lengthwise and six drawn across its breadth and contains: 1. The *sab'a khawātim*, i. e. Solomon's seal and other peculiar figures. 2. The seven *sawāḳiṭ* or consonants which are not found in Sūra I. 3. The names of God, *Fard*, *Djabbār*, *Shakūr*, *Thābit*, *Zahīr*, *Khabīr* and *Zakī*. 4. The names of the seven "spirits": *Rūḳyā'īl*, *Djabrā'īl*, *Samsamā'īl*, *Mīkā'īl*, *Ṣarfyā'īl*, *'Anyā'īl* and *Kasfyā'īl*. 5. The names of the seven kings of the djinns: *Mudhhib*, *Murra*, *Aḥmar*, *Burḳān*, *Shamhūrash*, *Abyaḍ* and *Maimūn*. 6. The names of the days of the week. 7. Those of the planets. The underlying notion is that secret relationships exist between those various components and the djadwal is therefore made to obtain definite results from the correlations of the heterogeneous elements composing it. In this way new djadwals for particular purposes

come to be made: these are also made by using the above mentioned seven seals. The extremely complicated system of mystic letters, which is based on the numeral values of Arabic letters, is very frequently used for the djadwal. A special class is formed by the squares called *wifḳ*, in the fields of which certain figures are so arranged that the addition of the horizontal and perpendicular lines, as well as that of the diagonals gives the same total (e. g. 34 or 15). The quadrilateral containing the celebrated magic name *budūḥ* [q. v., p. 770] is derived from such an arrangement. For the other meanings of *djadwal* cf. the notes s. v. in Dozy's *Supplément* and Redhouse's *Turkish and English Lexicon*.

Bibliography: By far the most important Arab authority is al-Būnī, *Shams al-Ma'ārif wa Laṭā'if al-'Awārif*, while the best European work is E. Doutté, *Magie et religion dans l'Afrique du Nord* (particularly p. 150 *et seq.*), where a further *Bibl.* is given. There is also some information in Lane, *An Account of the Manners and Customs of the Modern Egyptians*; also Herklots, *Qanoon-e-Islam*, particularly p. 231 *et seq.* and Seligmann, *Der böse Blick*, ii. 263 *et seq.* (E. GRAEFE.)

DJADY, the he-goat, more particularly a he-goat one year old. Ḳazwīnī gives only a few notes under the article *ma'z* (goat) on its natural history. Goats have thick skin and thin hair unlike sheep which have thin skin and are protected from cold by a thick covering of wool. When the he-goat sees a young lion, he approaches it slowly, but when he smells it, he falls into a stupor and lies as if dead till the lion departs. It eats tarantulas without harm and becomes fat on them. Its uses in medicine are numerous; Ḳazwīnī gives the *Kitāb al-Khawāṣṣ* of Balīnās as his authority for them.

In Astronomy, *al-Djady* is 1. the name of the Pole Star (α Ursae Minoris) "by which the Ḳibla is located"; 2. the name of Capricorn, the tenth constellation in the signs of the Zodiac, which is composed of 28 Stars.

DJA'FAR B. ABĪ ṬĀLIB, whose epithet was AL-ṬAIYĀR ("he who flies into Paradise"), a cousin of Muḥammad. Dja'far was one of the first converts of the Prophet and took part in the second migration of believers to Abyssinia. According to the usual story he was actually the leader of the emigrants and was spokesman at the audience with the Negūs. Some say that he also took part in the battle of Badr; but he was still in Abyssinia at this time. He did not return to Arabia till 7 (628), immediately after the battle of Khaibar, and he as well as his followers received from the Prophet a share of the spoil taken here. When in the following year Muḥammad sent an army of 3000 men under Zaid b. Ḥāritha against the Byzantines, he appointed Dja'far to be deputy in case Zaid should fall and 'Abd Allāh b. Rawāḥa to succeed Dja'far if he also should perish in the battle. They came upon the enemy at Mu'ta not far from the Dead Sea; Zaid, Dja'far and Ibn Rawāḥa fell in succession, and it was only with difficulty that Khālid b. al-Walīd was able to check the flying Muslims and lead them back to Medina. This happened in the year 8 = 629. The tomb of Dja'far al-Ṭaiyār is still shown at Mu'ta and is said to be reverenced not only by Muslims but by Christians also. The mosque there was built by the Aiyūbid al-Malik al-Mu'aẓẓam 'Īsā.

DJA'FAR B. AL-FAḌL. [See IBN AL-FURĀT.]

DJA'FAR B. MUḤAMMAD also called AL-ṢĀDIḲ ("the Trustworthy"), the sixth of the twelve Imāms. Dja'far was born in 80 (699-700) or 83 (702-703) and succeeded his father Muḥammad al-Bāḳir as Imām. He played no part in politics. On the other hand he was celebrated for his thorough knowledge of Muhammadan Tradition and is said also to have occupied himself with astrology, alchemy, and other secret sciences; but the works which bear his name are later forgeries. He died in Medina in 148 (765). The members of the Imāmiya sect are agreed upon the succession to the Imāmate down to his time; but they do not agree as to his rightful successor, for he had several sons and no fewer than four of them, Muḥammad, 'Abd Allāh, Mūsā and Ismā'īl, claimed the Imāmate. His son Mūsā al-Kāẓim is however recognised by most as the seventh Imām.

Bibliography: Ṭabarī (ed. de Goeje), iii. 2509 *et seq.*; Ibn Khallikān (ed. Wüstenfeld), N°. 130 (de Slane's translation, i. 300 *et seq.*); Shahrastānī (ed. Cureton), p. 16, 124 (Haarbrücker's translation 24, 187). (K. V. ZETTERSTÉEN.)

DJA'FAR B. MUḤAMMAD. [See ABŪ MA'SHAR, p. 99.]

DJA'FAR B. YAḤYĀ the Barmakid. The position of Dja'far's family placed him at once on intimate terms with the ruling dynasty, for his father Yaḥyā b. Khālid b. Barmak, as vizier and secretary of state, had long been virtual ruler of the great empire, while his brother al-Faḍl b. Yaḥyā was held in great honour by the Caliph Hārūn whose foster-brother he was and by his own personal qualities he succeeded in becoming the recognised favourite of the great 'Abbāsid Caliph and reaching the highest summit of power. In 176 (792-793) he was appointed Governor of Egypt but in the following year the Caliph relieved him from the post. When troubles broke out in Syria, he was sent there in 180 = 796-797 and restored peace. In the same year he was appointed governor of Khorāsān and Sidjistan, but replaced twenty days later by 'Īsā b. Dja'far. He was also vizier for a period. Nevertheless he did not play any considerable part in public life; his importance lies mainly in his great personal influence on Hārūn, who could not bear to be without the company of his witty and cultured friend; he even entrusted him with the education of his eldest son Ma'mūn. His striking attachment to the young Barmakid, which is probably to be

traced to a vice not uncommon in the East, even went so far that he married him to his favourite sister ʿAbbāsa. As he wished to have them both beside him and ʿAbbāsa could not unveil before the young Dja'far, they had to marry; but lest the Barmakids by this alliance might become a menace to the dynasty, the marriage was to be only a nominal one. Nevertheless ʿAbbāsa bore a son — according to another story, twins, — whom she had brought up in Mecca. The truth could not be concealed from the Caliph for ever. ʿAbbāsa was betrayed by a slave-girl and after Hārūn had convinced himself of the truth of her story, while on a pilgrimage to Mecca, he resolved to be avenged. On the second last day of Muḥarram 187 = 27th January 803, Dja'far was suddenly beheaded by the Caliph's orders without further investigation. The other Barmakids were thrown into prison and their property confiscated. Whether Dja'far's connection with ʿAbbāsa was really the cause of the Caliph's sudden outburst of hatred against his favourite, must remain uncertain however. But his dependence on the family of ministers must in the long run have become unbearable to Hārūn and with the unheard of power of the Barmakids only two things were possible, complete subservience on the Caliph's part or the utter destruction of the Barmakids. Other explanations are also given. For example, it is said that Dja'far had set free the rebel Yaḥyā b. ʿAbd Allāh without permission and had thus aroused the Caliph's wrath. In any case the latter must have been embittered against Dja'far personally for some reason; otherwise his wrath would have been mainly directed against his father, the head of the family. The intrigues of Faḍl b. al-Rabīʿ also were certainly not without influence. Probably several circumstances contributed to Hārūn's decision to overthrow the Barmakids. Cf. the article BARMAKIDS (p. 663).

Bibliography: Ṭabarī (ed. de Goeje), iii. see Index; Ibn al-Athīr (ed. Tornberg), vi. 82—161; Ibn Khallikān (ed. Wüstenfeld), Nº. 131 (de Slane's translation, i. 301 *et seq.*); Weil, *Geschichte der Chalifen*, ii. 135 *et seq.*; Müller, *Der Islam im Morgen- und Abendland*, i. 479 *et seq.*; E. H. Palmer, *Haroun al-Raschid*, Index (s. v. Jaafer). (K. V. ZETTERSTÉEN.)

DJA'FAR ČELEBI, an Ottoman poet, whose father Tādjī-Bey was attached to the personal service of Sulṭān Bāyazīd II, while the latter was governor of Amasia in the lifetime of his father Muḥammad II, displayed precocious talent and was therefore appointed Mudarris in Maḥmūd Pasha's school in Constantinople; from this post he was called to fill the office of *Nishāndji* (secretary to the Dīwān) and Bāyazīd appointed him supervisor of the Defterdārs, at the same time giving him the rank of Pasha, whence the name Nishāndji Pasha by which he was popularly known. After the revolt of the Janissaries in favour of Selīm, (917 = 1511) he was dismissed; but when the latter succeeded his father in the following year, he again appointed Dja'far Nishāndji; a little later he made him Ḳāḍī-ʿAsker of Anatolia and took him with him on his Persian campaign. Denounced by the Janissaries as one of the instigators of their refusal to march beyond Tabrīz, he was condemned to death and executed on the 8th Radjab 920 = 29th August 1514. He was buried in the mosque which he had built in the Balāṭa quarter (the Nishāndji Masdjidi). He left a *Dīwān*, which is not yet published, and a poetical work entitled, *Hewesnāme* "Book of Wishes". The lyrical style of his *Dīwān* is elegant, and shows the author's profound erudition but the artificial character of his poetry is too marked.

DJA'FAR, or MĪR DJA'FAR, called ZATALĪ, of Dihlī, a notable author of humorous poetical and prose compositions, some in Persian, others in mixed Persian and Urdu, including Fālnāmas, or treatises on fortune-telling. His ancestors came to India in the time of the emperor Humāyūn, and were given a tract of land rent-free, as a reward for loyal military service. At the commencement of the reign of Shāhdjahān they were dispossessed of these lands, and Saiyid ʿAbbās, the father of Mīr Dja'far, became dependent for a time on the earnings of his wife as a seamstress. After a while he opened a small shop, and, on receiving monetary assistance from a rich relative in the Dakhan, he was enabled to extend his business, and became a prosperous merchant. Mīr Dja'far was born shortly after the accession of Awrangzīb (A. D. 1658). He lost his father at an early age, and was brought up by his uncle Mīr Sarwar. On leaving school he obtained service under Kām Bakhsh, the youngest son of the emperor ʿĀlamgīr, and is said to have obtained the soubriquet of Zatalī "The Jester" from the Begam Zeb al-Nisā, daughter of the emperor. The date of his death is uncertain, but he is said to have lived to an age of over 60 years. His life has been written by Muḥammad Kāmil, under the name of "Hindustani Speculator" in a work entitled *Zar-i Dja'farī* (Lahore, 1890). His *Kulliyāt*, or complete works, have been frequently published. (J. F. BLUMHARDT.)

DJAFR. There developed very early in Shīʿite Islām a belief that the descendants of ʿAlī were in possession of a secret tradition, a body of religious and political esoteric knowledge covering all things to the end of the world. The general Muslim reverence for the family of the Prophet had grown in the Shīʿa to a belief that the Imāms could neither sin nor err. Thus, a book was ascribed to ʿAlī giving the inner meaning of the Ḳurʾān (Ibn Saʿd, ii, p. 101, l. 19), in intelligible enough opposition to the Sunnite exegesis of Ibn ʿAbbās. Even the Khāridjites make a jest of the secret knowledge professed by the ʿAlids (*Aghānī*, xx, p. 107, ll. 16 *et seq.*), and in the third century of the Hidjra, Bishr b. al-Muʿtamir, the Muʿtazilite, names a book by which they are deceived, as The *Djafr* (Djāḥiẓ, *Ḥayawān*, vi, p. 94, l. 1). Ibn Ḳutaiba (d. 276 A. H.) also refers to this book. In a quotation by Damīrī in his *Kitāb al-Ḥayawān* (sub *Djafr*, vol. i, p. 171, ed. of 1313) from Ibn Ḳutaiba's *Adab al-Kātib*, the *Djafr* is said to be a book by Dja'far b. Muḥammad al-Ṣādiḳ (the sixth Imām, d. 168), written on the skin of a *Djafr*, a just weaned kid or lamb, for the information of the House of the Prophet, containing all that they needed to know and all that was to happen until the Last Day. This passage does not seem to be in Grünert's text, and Damīrī may have

mistaken his book. For Ibn Ḳutaiba, according to Ibn Khallikān, has a passage to the same effect in his *Mukhtalif al-Ḥadīth* and adds there some lines by Hārūn b. Sa'd (or Sa'īd) al-Idjlī, head of the Zaidites, ridiculing this pretension (Ibn Khallikān, de Slane's text, p. 432; de Slane's transl. ii, p. 184; Wüstenfeld's text, N°. 419; Goldziher in *Zeitschr. d. D. Morgenl. Ges.*, xli, p. 123; Friedländer in *Journ. Am. Or. Soc.*, xxix, p. 106). Ibn Ḳutaiba's etymology is more than dubious; there seems no trace of *Djafr* being used in the sense "vellum" or "parchment". Van Vloten (*Chiitisme*, p. 56, note 6) suggested a connection with γραφή and Goldziher (*Beitr. z. Liter. d. Shī'a*, p. 20, note 5) with Dja'far. But more singular still is the fact that while the *Fihrist* has many references to Dja'far al-Ṣādiḳ (p. 178, l. 13; p. 198, l. 7; p. 224, ll. 20 *et seq.*; p. 317, l. 26; p. 355, ll. 1 *et seq.*) and does not hesitate to bring him into connection with Djābir b. Ḥaiyān the alchemist (p. 355) and questions, though to reject, his asserted authorship of a medical book on myrobalan (p. 317, l. 26), it has no scrap of mention of this *Djafr*. A *Kitāb al-malāḥim* by 'Alī b. Yaḳṭīn is referred back to his authority (p. 224, l. 24), and it is plain that such books were current in his environment. See another *K. al-M.* (p. 223, l. 20) and a *K. al-Kashf* (p. 222, l. 17). Yet the *Djafr* would certainly fall within the class of *Malāḥim* books. The existence, however, of this unseen, infallible book was universally asserted by Shī'ites. When a Shī'ite author tells how Ma'mūn appointed the 'Alid Imām, 'Alī b. Mūsā al-Riḍā (eighth Imām of the Twelvers; d. 202) as his successor, he always adds that 'Alī in accepting, wrote to Ma'mūn "although the *Djafr* and the *Djāmi'a* indicate the opposite of this" (e. g. *al-Fakhrī*, p. 198 of ed. of Cairo, 1317). The *Djāmi'a* is another similar book often mentioned in this connection. For it see Goldziher, *Beitr. z. Liter. d. Shī'a*, p. 55 and note, and for an interesting hypothesis of its origin, bringing it together with the *Rasā'il* of the Ikhwān al-Ṣafā, Casanova, in *Journ. As.*, 9 sér., vol. xi, pp. 151 *et seq.* Yet another such book is the *Muṣḥaf Fāṭima* (Goldziher, l. c.). Another historical occasion with which it is always connected is the appearance in the Maghrib of Ibn Tūmart. It was the Muwaḥḥid tradition that their Mahdī had been a favorite pupil of al-Ghazzālī, the custodian at the time of the *Djafr*. That al-Ghazzālī had learned from the *Djafr* the high destiny of Ibn Tūmart, and that at his death the book had passed into the custody of Ibn Tūmart (see my *Life* of al-Ghazzālī in *Journ. Am. Or. Soc.*, vol. xx, p. 113, and especially *Ḳarṭās* pp. 116 *et seq.*; add the pseudograph *Sirr al-'Ālamīn*, p. 2 of ed. of Bombay 1314). But the opinion of the saner and more sceptical public may be gathered from al-Bīrūnī and Ibn Khaldūn. Al-Bīrūnī (d. 440) speaks (*Chronology*, transl. Sachau, pp. 76, 182) with the greatest reverence of al-Ṣādiḳ, but has no patience with the decisions as to calendar falsely ascribed to him. He does not mention the *Djafr*. Ibn Khaldūn treats the *Djafr* in connection with the books of *Malāḥim* (Quatremère's text, ii, pp. 184, 191; Būlāḳ ed. of 1274, pp. 162, 164; de Slane's transl. ii, pp. 214, 224). He believes that the House of Muḥammad had, like all the *walīs*, the *karāma* of prophecy. Such a book, therefore, might have been produced by Dja'far al-Ṣādiḳ, but he finds no proof of such connection. The fragments in currency may, he thinks, connect with a book called *al-Djafr* which Hārūn b. Sa'īd al-Idjlī possessed and which he said had come to him from Dja'far al-Ṣādiḳ. But of that descent there was no proof. [But see above as to this Hārūn]. There was trace also, said Ibn Khaldūn, of another book called *Djafr*. It was by Ya'ḳūb b. Isḥāḳ al-Kindī, astronomer to Hārūn al-Rashīd; it treated astrologically of the fates of the Muslim empire and was based on astronomical conjunctions. But it had been completely lost. So far, the connection of the *Djafr* has been with prophetic traditions and astrological calculations (see de Goeje's *Mémoire sur les Carmathes*, pp. 115 *et seq.*). But in time there arose a belief that in it meanings were cabalistically expressed by separate letters, and *'Ilm al-Djafr* came to mean *'Ilm al-Ḥurūf*, the method of prediction by assigning (by *Abdjad*) numerical values to letters (Ḥādjdjī Khalfa, ii, pp. 603 *et seq.*). To this science (*al-Sīmiyā'*) Ibn Khaldūn devotes a section (Quatremère, iii, pp. 137 *et seq.*; de Slane, iii, pp. 188 *et seq.*; Būlāḳ, pp. 245 *et seq.*); but makes no connection with Dja'far or the *Djafr*. In his exposition *Sīmiyā'* reads like a reductio ad absurdum of nominalism, and, certainly, the idea that letters in themselves represent real things, combined with a recognition that Arabic is sacred in itself as the vehicle of the Muslim message, seems to have led to this transition (*Dict. of techn. terms*, i, pp. 202 *et seq.*; also on pp. 127—131, sub *ḥarf*, on *Djafr* as *'Ilm al-Ḥurūf*). This has come to be the ruling association with the word *Djafr*. For further details, references and instances of existing treatises and fragments bearing this name, see Brockelmann, i, 44, l. 11; p. 220, note; p. 446 (Ibn 'Arabī, N°s. 77, 78, 80); p. 464 (N°s. 5, 6); Murādī, *Silk al-Durar*, i, p. 51 (a translation into Turkish of *Djafr al-Aḳṭādjī* (?) still assertedly preserved in the library of the Sulṭān at Constantinople); Ahlwardt in *Berlin Cat.*, iii, pp. 551 *et seq.*; Rieu in *Suppl. to the Cat. of Arab. MSS in Brit. Mus.*, N°. 828. For use in popular literature, see *Story of 'Aṭṭāf*, Burton's *Arabian Nights*, Library ed., vol. xii, pp. 114 *et seq.*; the book is in the library of Hārūn al-Rashīd and is consulted by him.

(D. B. Macdonald.)

DJAGHBŪB, a Zāwiya of the Senūsī in the Oasis of Faredgha on the frontier between Tripolitania and Egypt, fifteen days' journey S.E. of Benghāzī and two S. W. of the Oasis of Sīwa: Lat. 29° 47′ N., Long. 24° 20′ E. (Greenw.). This place was uninhabited when Shaikh Sīdī Muḥammad b. 'Alī al-Senūsī, founder of the Senūsiya order, settled there on his return from Mecca and Cairo in 1855. He built a Zāwiya on a rocky spur commanding the oasis, dug a spring out of the rocks and planted gardens and a palm-grove. He died and was buried there in 1859; beside him lies one of his sons Sīdī Muḥammad Sharīf, (d. 27th Ramaḍān 1313 = 12th March 1896). The Zāwiya seems to have developed rather slowly at first. In 1874 it only contained a few students and some slaves but it soon afterwards began to expand rapidly. In 1881, according to Duveyrier,

it contained 750 *ṭalba* and 3000 slaves. Besides the religious buildings, there were workshops of all kinds and an arsenal. Under Shaikh Sīdī Muḥammad al-Mahdī, son and successor of the founder, the Zāwiya became the headquarters of the propaganda, and from it missionaries spread Islām and Senūsī doctrines throughout all Central Africa, particularly towards Wadāi. In 1890 the Shaikh removed from Djaghbūb to Bilād al-Djūf in the oasis of Kufra, to be nearer Wadāi and at the same time to remove his disciples from the reach of European influence. Djaghbūb has nevertheless remained the most important Zāwiya of the Senūsī. It is a place of pilgrimage and a centre of learning, attended by 3—400 students, with a library of about 8000 volumes as we know from Shaikh al-Hashā'ishī.

C.)* in the *Bulletin de la Soc. de Géogr. de Paris*, 1884; al-Hachaïchi (le Cheik Moḥammed ben Otsmane), *Voyage au Pays des Senoussia*, trad. par V. Serres et Lasram (Paris 1905; 2nd ed. Paris 1912). (G. Yver.)

al-**DJAGHMĪNĪ** (or Čaghmīnī), Maḥmūd b. Muḥammad b. ʿOmar, an Arab astronomer of some importance born in Djaghmīn, a district in Khwārizm. His date is not quite certain but it is very probable that he died in 745 (1344-1345) (cf. my note on this point in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, liii. 539). We possess the following works from his pen: 1. *al-Mulakhkhaṣ fi 'l-Haiʾa* (Compendium of Astronomy), a work which was very popular and has often been annotated, e. g. by Ḳāḍīzāda al-Rūmī, al-Djurdjānī, etc. A German translation of this work by Rudloff was published in the *Zeitschr. der D. Morgenl. Ges.*, xlvii. 213 *et seq.* Numerous manuscripts still exist, in Berlin, Gotha, Leiden, Paris, Oxford etc. 2. *Ḳuwa 'l-kawākib wa ḍaʿafhā* ("The Strong and Weak Influence of the Stars"), a copy of which still exists in Paris. 3. *Ḳānūnče* (the "Minor-Canon"), a medical work, extracted from the *Ḳānūn* of Ibn Sīnā, which still exists in Munich, Gotha, etc.

Bibliography: Ḥādjdjī Khalīfa, vi. 115; Brockelmann, *Gesch. d. Arab. Litteratur*, i. 473; Nallino, *al-Battānī, Opus astronomicum*, various passages (s. the Index of this work); Suter, in *Abhandlgn. z. Gesch. d. mathem. Wissensch.*, x. 164; xiv. 177. (H. Suter.)

DJĀGĪR (P.), literally = "he who takes a place", is used in India, in the same sense as the Arabic *iḳṭāʿ*, for a piece of ground which is granted to any one either for his lifetime or in perpetuity as a grant, as a reward of service. The holder of such a grant is called *djāgīrdār*. (cf. H. H. Wilson, *Glossary* s. v.; Bernier's *Travels* (London 1891), p. 213, 224).

DJAHĀNĀRĀ BEGAM was commonly known as the Bēgam Ṣāḥib, and is also sometimes called Pādshāh Bēgam. She was the eldest surviving child of Shāh Djahān, and was born in March 1614, probably at Adjmīr. Her mother was the Ardjūmand Bānū, or Mumtāz Maḥal or Mumtāz al-Zamānī the daughter of Āṣaf Khān (No. II.) and niece of Nūr Djahān, for whom the Tādj Maḥal was built. Djahānārā was never married, and was distinguished for her beauty and accomplishments, and her affection for her father and for her brother and spiritual guide, Dārā Shikōh. Both Bernier and Manucci have a good deal of unpleasant gossip about her, and though Manucci acquits her of one horrible charge, he does both her and Bernier injustice when he says that Bernier charges her with having poisoned her majordomo. She may have had her faults and her enforced spinsterhood was not conducive to morality, but she was most generous and charitable, and was a devoted daughter to her father when he was old and imprisoned, so that Mr. Keene aptly calls her the Moghul Cordelia. She was very religious, and wrote an account of one of her favourite saints, Muʿīn al-dīn Čishtī of Adjmīr (Rieu, *Catalogue of B. M. Persian MSS.*, i. 357). In March 1644 she had a narrow escape from burning. They were celebrating her birthday (according to the solar and not the lunar Calendar) at Āgra, and she was returning to her chamber after saying good-night to her father, when her dress of Dacca muslin caught fire from a naked light. She was severely burnt on the chest and arms, and her four handmaidens who tried to save her were also burnt. Indeed, it appears that two or more of them died of their injuries. The chief mosque of Agra was built by her, or in her honour, and probably as a memorial of her recovery, in 1644—1648. She also built her tomb outside Dihlī in the precincts of the tomb of Niẓām al-dīn Awliyā, a famous saint of the Čishtī order. It bears a touching inscription composed by herself. The original text of it is given in Saiyid Aḥmad's *Āthār al-Ṣanādīd*, (p. 39 of Lucknow edition of 1895) and there a translation of it by Eastwick and Keene (see the latter's *Handbook to Delhi*, Calcutta, 1882 p. 37). She died in Dihlī on 6 September 1681. There is a good account of her in Keene's edition of Beale's *Oriental Biographical Dictionary*, and there are references to her in the *Pādishāhnāma* and in *Khāfī Khān*. (H. Beveridge.)

DJAHĀNDĀR SHĀH, Muḥammad Muʿizz al-Dīn, the thirteenth emperor of Dihlī of the house of Tīmūr, eldest son of Shāh ʿĀlam Bahādur Shāh, was born in May, 1661. Before his accession he was governor of the province of Multān, and on his father's death in Lāhor, in 1712, was raised to the throne by Dhu 'l-Fiḳār Khān, who was instrumental in overthrowing his three brothers, ʿAẓīm al-Shaʾn, Rafīʿ al-Ḳadr, and Djahān Shāh. Djahāndār Shāh was vicious, feeble, and pusillanimous, and scandalised all classes of his subjects by his open and shameless profligacy and his subservience to his mistress, Lāl Kunwar, a Hindū dancing-girl. He had not been seated on the throne a year when Farrukhsiyar, the eldest surviving son of his brother, ʿAẓīm al-Shaʾn, succeeded in attaching to his cause the two Saiyid brothers of Bārha, ʿAbd Allāh Khān, governor of Ilāhābād, and Ḥusain ʿAlī Khān, governor of Bihār. Farrukhsiyar and the Saiyids marched from Paṭna towards Āgra, putting to flight Djahāndār's son Aʿazz al-Dīn, a cowardly youth who, although at the head of superior numbers, fled without striking a blow. Djahāndār Shāh, on receiving news of his son's flight, marched with Dhu 'l-Fiḳār Khān and an army of 80,000 horse from Dihlī to Āgra. At Samūgaṛh near Āgra the armies met; and during a fiercely contested battle Djahāndār Shāh and his son Aʿazz al-Dīn fled, leaving Dhu 'l-Fiḳār Khān opposed to the rebels. Dhu 'l-Fiḳār Khān, unable to discover the fugitives, was forced to retire, and

Farrukhsiyar advanced on Dihlī. On Febr. 12, 1713, Djahāndār Shāh was strangled by the orders of his successor, Farrukhsiyar.

DJAHĀNGĪR, eldest son of the Emperor Akbar. He was born at Fathpūr Sīkrī on 31 August 1569. His mother was a Rādjpūt, the daughter of Rādjā Bihārī Mal Kachwāhā, who afterwards was styled Miryam al-Zamānī, "The Mary of the Age". His father gave Djahāngīr the name of Sulṭān Salīm, though he generally called him Shaikhū Bābā, in allusion to the belief that he was born in answer to the prayers of the derwish Salīm Čishtī, and in his cell. When Djahāngīr ascended the throne on 24 October 1605 he took the title of Nūr al-Dīn Djahāngīr Pādshāh. After death he was styled Djannat Makānī "He whose abode is in Paradise". He reigned for 22 years and died on 28 October 1627 shortly after leaving Kashmīr on his way from Kashmīr to Lahore. He is buried at Shāhdara near Lahore, on the right bank of the Rāwī, and close by is the tomb of his wife Nūr Djahān.

Djahāngīr was not without abilities, and he had a genuine love for nature and was a lover of justice but he was a drunkard and an opium-eater, and his reign is not marked by any feat of arms or of virtue, except perhaps his constructing a shady avenue from Agra to Lahore. In the 17th year of his reign, 1622, Kandahār was lost to the Persians. While a prince, he caused the murder of his father's minister Abu 'l-Faḍl, and indulged so much in debauchery that Akbar wished to pass him over and to make his son Khusraw his heir. Djahāngīr also rebelled against his father, and probably it was sloth and cowardice rather than filial affection which prevented him from executing his designs. He was a worse man than his contemporary James I of England, and had a worse training, but there were curious resemblances between the two men. Both loved learning and hunting, both were weak of will and under the power of favourites, both had a certain amount of bonhomie and good nature, and both fulminated against tobacco. As Macaulay has shown that James resembled the Emperor Claudius, it follows that Djahāngīr had something in common with the latter. It was perhaps a pity that Akbar did not allow his son to marry Nūr Djahān in his youth. She would probably have had a good influence over him. He did marry her after he became king, but to do so he had to act somewhat after the fashion of king David with Uriah, and to procure the death of her husband. Djahāngīr had no children by Nūr Djahān. Indeed she was almost an elderly woman when she married him. She had a daughter by her first husband and her interest in her son-in-law — Shahryār the youngest son of Djahāngīr — and her quarrel with Shāh Djahān, had disastrous consequences for India. They are eloquently described in the *Ma'āthir al-Umarā* I, p. 133, in the notice of her father Ghiyāth Beg. One of the most remarkable events of Djahāngīr's reign was his capture and practical dethronement by Mahābat Khān in 1626. Eventually Nūr Djahān released him. Djahāngīr had five sons and two daughters. The eldest, Sulṭān Khusraw, rebelled against him in the beginning of his reign, but was defeated and captured and died in the Dakhan after a long imprisonment. Sulṭān Parwēz was an amiable prince, but had his father's vice of drunkenness, and died before him. Sulṭān Khurram, afterwards Shāh Djahān, rebelled but eventually submitted. He succeeded his father. Sulṭān Djahāndār, who was born at the time of the accession and so was called Sulṭān Takht (the Throne-Sulṭān), seems to have been an idiot from birth. Sulṭān Shahryār was worthless, and was nick-named „Good for Nothing". He attempted to become king on his father's death and was executed.

Djahāngīr wrote his own Memoirs. They are styled *Tūzuk-i-Djahāngīrī*, and are interesting and valuable. The first volume has been translated, and published by the Roy. As. Soc. London, 1909. There is another version of the *Tūzuk* but it is more or less spurious. A translation by Major Price was published in 1829 by the R. A. S. The Persian text of the *Tūzuk* was published by Saiyid Aḥmad of Aligarh at Ghāzīpūr in 1863, and again at Aligarh in 1864. It contains a good many errors. Much of the Memoirs is translated in the 6th volume of Elliot's *History of India*. Sir Thomas Roe's *Journal*, and the book by his chaplain the Rev. Edward Terry contain interesting notices of Djahāngīr. There is also a Persian life of his reign by his secretary Mu'tamad Khān which was published in the *Bibl. Ind.* in 1865. (H. Beveridge.)

DJAHĀN-SHĀH, Muẓaffar al-Dīn, the third ruler of the Kara-Kuyūnlū dynasty, was the son of Kara-Yūsuf; after unsuccessfully fighting on the side of his brother Iskandar against Shāh-Rukh, the son and successor of Tīmūr (832 = 1429), he submitted to him in 838 (1434-1435), and was granted the governorship of Ādharbaidjān on Iskandar's flight (839 = 1435-1436). After the departure of the Tīmūrid he was attacked by his brother but besieged him in the fortress of Alandjak, in which he had taken refuge; Iskandar was murdered by his own son Kubād. Djahān-Shāh became undisputed lord of this province and as such marched against Georgia. On the death of Shāh-Rukh (Sunday, 25th Dhu 'l-Ḥidjdja 850 = 12th March Jul. Kal. 1447 = 1st Nawrūz; see Khondamīr, iii. 3 p. 138) he rose against the Tīmūrids, captured Iṣpahān, massacred the inhabitants and conquered almost the whole of Persia including Khorāsān and the coast of 'Omān (862 = 1458). He fought with the Kara-Kuyūnlū and unsuccessfully invaded Diyār Bakr; when he was retreating in midwinter over the mountains near Mūsh, which separated him from Tabrīz, he was suddenly attacked by Uzūn-Ḥasan in his tent and slain (12th Rabī' II 872 = 10th November 1467). His body was brought to Tabrīz and buried there. He had reigned for 32 years. His reign was marked by the rising of his son Ḥasan who, confined in Ādharbaidjān, had taken advantage of his father's preparations against Abū Sa'īd to raise the province, and by that of his other son Pīr-Budāk, governor of Baghdād, who forced his father to besiege him for eighteen months in this city (869 = 1464). Djahān-Shāh was a freethinker, who led a dissolute life; as he turned night into day, he was called *Shab-para*, "the bat". After his death the throne passed to Uzūn-Ḥasan and the Ak-Kuyūnlū dynasty.

Djahān-Shāh was also the name of a younger son of Bahādur-Shāh I, the Mughal Emperor of India, who fell at Lahore in 1124 = 1712 in the fighting after the death of his brother Djahāndār-Shāh.

DJAHAN-SŌZ, or 'World-burner', an epithet bestowed upon 'ALĀ' AL-DĪN ḤUSAIN, the Ghōrī chief who defeated the Ghaznawī king Bahrām Shāh and sacked the towns of Ghaznīn and Bust in a ferocious manner, hence earning his nickname; 545 (1150). He afterwards joined the Ghuzz and Khaldj in attacking the Saldjūḳ monarch Sandjar, but was defeated and taken prisoner. He was shortly afterwards re-instated in his government of Ghōr, and extended his rule into the Murghāb valley. He died at Herāt in 551 (1156) leaving the Ghōrī Dynasty in a very strong position. [See Arts. AFGHĀNISTĀN, pp. 163-164 and BAHRĀM SHĀH (Sulṭān), p. 586].

(M. LONGWORTH DAMES.)

DJAHANNAM, the Muslim name of Hell. The word is derived from the Hebrew *gêhinnōm* or valley of *hinnōm* (Joshua, xv. 8); it was a valley near Jerusalem in which sacrifices were offered to Moloch, in the days of impiety. The form with the long vowel (*Djahannām*) means a deep well.

The word *Djahannam* and the idea of hell frequently appear in the Ḳor'ān, whether because Muḥammad himself had been much struck with the idea or because he thought it useful to insist on it to work upon the feelings of his hearers. He does not however seem to have had a very definite picture before him; in fact, in certain passages, he speaks of it as if it were something portable: "Bring hell" God shall say on the last judgment (*Ḳor'ān* 89, 23—24); the angels will then form their ranks "and hell shall be brought nigh". In this passage it would appear that Muḥammad represented hell as an animal; for him it was a kind of gigantic monster, with gaping, glowing jaws, ready to devour the damned; western artists of the middle ages have sometimes similarly depicted the purgatory of St. Brandan. This explains how in another passage Muḥammad says: "hell shall almost burst for fury" (67, 8).

The Imām Ghazālī, in his curious eschatological treatise entitled *al-Durra al-Fākhira*, has discussed those laconic texts. Hell begins to tremble when God commands that it shall be brought in. The angels having told it that God does not wish to punish it but to punish guilty men with it, it allows itself to be led. It walks on four legs, each of which is bound by 70,000 rings; on each of them are 70,000 demons each of which is strong enough to rend mountains to pieces. In moving, hell gives forth a buzzing, groaning and rattling noise; sparks and smoke are sent out from it and the horizon is filled with darkness. At the moment when it is still separated from mortals by a space of a thousand years, it escapes the hands of the demons and throws itself with a terrible noise on the crowd of men assembled at the place of judgment.

But the conception of hell as an animal is not the dominant one in the Ḳor'ān; beside it there is the well-known architectural conception of a hell composed of concentric circles arranged in the form of a crater. This representation has its prototypes in antiquity, in the infernal rivers of the Greeks, in the Assyrian hell with seven gates in the legends of Ishtar. It is the conception which took hold of the popular imagination in the middle ages, in the east as well as in the west, and we find it expressed with so much power in Dante's work.

Muḥammad had only quite a rudimentary notion of the structure of hell; he speaks of its gates, specifying that there are seven (*Ḳor'ān*, xxxi. 33; xv. 43—44). A plan of hell is given in the Turkish work, the *Ma'rifat-Nāmah*. It is situated under the pedestal of the world, above the Bull and the Fish (corresponding to the Behemoth and Leviathan of the Bible) who support the earth. It is composed of seven stories forming a vast crater. Above is a bridge thrown the whole length across it; this bridge, as narrow as the edge of a sword, has to be crossed by the souls in order to enter Paradise; the souls of saints cross it in a moment; those of ordinary righteous people take a longer or shorter time to cross it, while those of the unrighteous do not reach Paradise but fall into the gulf.

At the lowest stage of hell is a tree called *Zaḳḳūm* which has for flowers the heads of demons (cf. *Ḳor'ān*, xxxvii 60—64), a caldron of boiling and stinking pitch and a well which reaches to the bottom of all things.

The punishments in the Muslim hell are varied and graduated according to the kind and importance of the sins, as in Dante's Inferno; the Ḳor'ān hardly mentions them; but they are described by some authors, notably Suyūṭī (died 911 A. H.).

These very materialistic representations of the structure of hell and its punishments have not satisfied all spirits in Islām; even the pious and believing Ghazālī allows himself to explain away a little on this point. Thus the road or bridge thrown across hell has for him only a moral meaning; it is merely the "straight path", by which God conducts the faithful and symbolises the just mean between opposite faults; it is the boundary between excess and failure, in which perfection lies (see the end of his *Madnūn*, ed. Bombay, p. 126). According to Avicenna, the pains of hell chiefly consist in sinful souls retaining their sensual inclinations after death; but thus they suffer horribly as they have no bodies wherewith to satisfy them.

The Ḳor'ān appears to hesitate a little on the question of the eternity of punishment in hell; the passages, which refer to this point, do not quite agree. Perhaps this uncertainty is due merely to the fact that Muḥammad, who was not a speculative philosopher, was not able clearly to face a question into which there entered such an abstract conception as eternity.

"They for whom the balance shall be light", it is said in one passage (*Ḳor'ān*, xxiii. 105) "are those who shall themselves perish in hell and shall dwell there for ever (*Khālidūn*)". But elsewhere (xi. 108—110) Muḥammad says: "The damned shall be cast into fire .... they shall dwell there so long as the heavens and the earth shall last, unless God wills otherwise".

The Imām Ash'arī has reproached the Mu'tazilites and the Ḳadarites with making men despair of the mercy of God, by teaching that traitors are condemned to eternal fire. This, according to him, is contrary to the words of the *Ḳor'ān* (iv. 116) "he will pardon all else except idolatry to whom he will" and to this traditional saying of the

Prophet: "he shall make men come out of hell after they have been burned and reduced to cinders".

This Imām's view is that which has prevailed in Islām.

(B. CARRA DE VAUX.)

DJĀHIL (A.) "ignorant"; cf. DJĀHILĪYA. Among the Druses *Djāhil* is a technical term meaning "uninitiated, layman" (opp. *'Āḳil*, q. v., p. 239).

DJĀHILĪYA is the name given to the state of things which obtained in Arabia before the promulgation of Islām, or in a narrower sense the period when there was no prophet, between Jesus and Muḥammad (see art. FATRA). It is the collective noun from Djāhilī, a pagan Arab, especially a poet of the earliest of the four chronological classes, of which the second is Mukhaḍram, denoting one who was born in pagan times, but who died under Islām.

As to the exact meaning of the term Djāhilīya the usual opinion is that of J. D. Michaelis and others, that it is "the time of Ignorance", as the period before Christianity is named in Acts 17, 30, Islām being regarded as the period of enlightenment and knowledge. *Djahila* 'to be ignorant' is the antonym of *'alima* 'to know' frequently in the old language and oftener in more recent times. Thus 'Antara, *Mu'allaḳa*, l. 43: *in kunti djāhilatan bimā lam ta'lami*. But Goldziher points out that this sense of *djahila* is really secondary and that in its primary sense it is opposed not to *'alima* but to *ḥaluma*, to be clement, forbearing, grave, and so means to be rude or rough or boorish, and he cites a number of verses in which derivatives from these two roots stand together by way of contrast, e. g. Al-Shanfarā, *Lāmiyat al-'Arab*, v. 53: *walā tazdahī 'l-adjhālu ḥilmī*. Hence he renders Al-Djāhilīya "Barbarei". (*Muhammedanische Studien*, I, 219 *et seq.*). The word occurs in the Ḳor'ān 3, 148; 5, 55; 33, 33; 48, 26.

The history and indigenous religion of the Djāhilīya have been dealt with above in the art. ARABIA, p. 379 *et seq.* Goldziher draws a sharp distinction between the Arabs of the South and those of Central Arabia. The former were of a distinctly religious turn of mind: the latter had practically no religion. But this statement has to be modified by the consideration that so many southern Arabs migrated to the north. This was especially the case with Yathrib. Moreover, as Professor Margoliouth remarks, inscriptions may yet be found which will throw light on the religious ideas of the Central Arabian tribes, as has been done in the case of the southern and northern. But, so far as we know at present, the people of Central Arabia, to judge from the poetical and other remains, were indifferent to religious ideas. The utmost they could attain to was a vague deism or belief in Fate (*manāyā*, *manūn*). The descriptions of idolaters in the Ḳor'ān refer largely to times long past and very little at all to Muḥammad's contemporaries, whose treatment of Muḥammad shows that their reverence for their idols was not very deep.

What was of very much more importance to the pagan Arab than religion was his tribal connection. The clan was the unit from which all the society he had was built up. Even Islām was powerless to displace his attachment to his tribe, and tribal feuds were carried on after the time of Muḥammad as before, if not to the same extent. The great rivalry of North and South was still being fought out in Khorāsān in the second century (Mas'ūdī, vi. 36 *et seq.*) and even at the present day the population of a district will keep up the distinction of Ḳaisī and Yamanī (Finn, *Stirring Times*, i. 226 *et seq.*). Much of the old poetry consists of panegyric of the poet's tribe and satire of those to which he does not belong; and the tribe is sometimes a very wide term.

The pagan Arab's idea of morality is expressed by the word *murūwa*, that is, manliness, virtus. This consists mainly in courage and generosity. His courage is shown by the number of enemies he kills, by his defending his own clan, but also by chivalrous treatment of his foes very much akin to that of the mediaeval knight. His generosity appears in his being always more ready to join in the fray than to share in the spoil, in his readiness to slaughter his camels for behoof of the guest and of the poor and helpless, and in his being generally more willing to give than to receive.

Arab hospitality no doubt often led to excesses in both eating and drinking, such as were common in Europe a century ago, and it cost them a hard struggle to give up the use of wine on turning Muslims. It was considered with some a point of honour to remain in a tavern until the wine-merchant was compelled to take down his sign, the wine being spent. At the same time the sot or habitual drunkard was not tolerated. Barrāḍ b. Ḳais was expelled from more than one tribe on account of his vicious habits in this respect. Wine-songs continued to be composed long after Islām had forbidden the drinking of wine, poetry and religion presenting in this respect a curious contrast. But so strong was the Arab liking for wine that its use was permitted during the Umaiyad period, though forbidden again under the 'Abbāsids.

The position of women among the pagan Arabs was in some respects freer than under Islām. Marriage with two sisters and the *Nikāḥ al-Maḳt* were permitted, but on the other hand the institution of the veil was unknown. Divorce was not more easy than it is under the Muslim code and women had the right to it as well as men. Indeed, the relations of the sexes before the time of Muḥammad were in some respects quite good. In any case they were capable of being improved, whereas after the law of Islām had once come into force, alteration was not to be thought of. The worst feature of the Islamic marriage code — that of the *mustaḥill* — was unknown.

The produce of the soil of Arabia has always been insufficient to support its inhabitants. In certain favoured spots such as the Yemen, and in the oases food was to be had in plenty. The people of Mecca made their living as carriers between the Yemen and Syria, to which fell to be added the profit they made out of the pilgrims who annually thronged their town. But the desert population of Arabia has always been in a state of chronic starvation. Partly for this reason

they had recourse to the practice of burying female infants at their birth. The flesh and milk of their camels was supplemented by constant raids upon neighbouring tribes. These raids did not increase the total amount of supplies available, but they helped to keep down the number of mouths to feed.

For the purposes of trade and commerce, as well as in order to enable tribes living at a distance to visit the national shrines and attend the fairs, four months in each year were set apart as sacred months in which raids could not be undertaken. By far the most important of the sacred places to which pilgrimages were made annually was Mecca, and the most famous of the fairs was that of ʿUkāẓ. During these months caravans could pass almost unarmed throughout the country. Muḥammad's first success in arms was due to a breach of this "truce of God", and when he made the Arab year purely lunar he ruined the annual fairs; but the habit of pilgrimage to sacred places was too deeply rooted in the Arab nature for him to put a stop to it. The utmost he could do was to abolish all the shrines save one, and make that the house of the One God.

AL-**DJĀḤIẒ**, ABŪ ʿOTHMĀN ʿAMR B. BAḤR, a client (*Mawlā*) of Kināna, surnamed *al-Djāḥiẓ* (on account of his prominent eyes) was a famous prose-writer and theologian, one of the chiefs of the Muʿtazilite school of Baṣra. His literary education was under the influence of the men of letters and culture of Baṣra, called *Masdjidīyūna* because they used to meet in the great Mosque (*Bayān*, i. 98; ii. 164). The Caliph Maʾmūn read and appreciated his books on the Imāmate and summoned him to his court. His prosperity dates from his relations with Ibn al-Zaiyāt [q. v.], vizier from 220 A. H. of the Caliphs Muʿtaṣim and Wāthiḳ. The vizier, himself a scholar, protected the now famous native of Baṣra and let him want for nothing. During this period Djāḥiẓ often lived in Baghdād and al-ʿAskar (the summer residence of the Caliphs at Sāmarrā). He also visited Damascus and Antioch. At the beginning of the reign of Mutawakkil, Djāḥiẓ, though involved in the fall of Ibn al-Zaiyāt, succeeded in escaping the fate of his protector. He was able to win the good graces of the Chief Ḳāḍī Aḥmad b. Abī Dāʾūd, the rival in politics and in literature of Ibn al-Zaiyāt, to whom and to his son Abu ʾl-Walīd Muḥammad he therefore dedicated his works. The Caliph Mutawakkil, who wished to make Djāḥiẓ tutor to his sons, had to give up this idea because he was so repulsively ugly. In 234, the Ḳāḍī Aḥmad became paralysed. His son, who had succeeded him, was dismissed in 237. A reaction had begun to make itself evident in the Caliphate in favour of traditional theology, a movement hostile to the Muʿtazilites. Djāḥiẓ laments in his treatise on the Nābita (published by v. Vloten in the *Actes du XIe Congrès Intern. des Orientalistes*, 3rd sect., 315 *et seq.*), that the latter studied the *Kalām* and made use of it against them. At court, the Muʿtazila movement gradually lost the preponderating influence it had hitherto possessed. It is not certain that this reaction hurt the popularity of Djāḥiẓ; we only know that he retired to Baṣra, paralysed on one side, where he died in 255 A. H. (according to others in 250). He was over ninety. Like his contemporary Balādhurī [q. v., p. 611] Djāḥiẓ had no regular profession. The gifts he received from various individuals to whom he dedicated his works, sufficed for his wants.

To characterise this author's numerous writings, one might say that he was before all else a man of letters. His books, even those which deal with theological subjects, have a literary rather than a scientific character. They are causeries, in which he dealt with current topics. Like his master Abū Isḥāḳ Ibrāhīm Ibn Saiyār al-Naẓẓām, Djāḥiẓ was one of the first Muʿtazilites to study the Greek philosophers, particularly the naturalists (Aristotle). In his theological works, as far as we can judge from the fragments we possess (*Kitāb al-Ḥudjadj fi ʾl-Nubūwa*, *Kitāb al-Maʿrifa*, *Kitāb Khalḳ al-Ḳurʾān*, *Kitāb al-Radd ʿala ʾl-Mushabbiha*, *Kitāb al-Radd ʿala ʾl-Naṣārā etc.*) Djāḥiẓ takes his arguments from experience and history and is not satisfied with arid and speculative deductions. He also proves himself a fairly good psychologist. The same remark applies to his books on the Imāmate, in which he unfolded the views of the different sects with remarkable impartiality. (Masʿūdī, *Murūdj*, vi. 55 *et seq.*). In his books on the Arabs and the clients (*Kitāb al-ʿArab wa ʾl-Mawālī*) and on the Arabs and Persians (*Kitāb al-ʿArab wa ʾl-ʿAdjam*), Djāḥiẓ tried to estimate the relative positions of the two dominant races of the Caliphate. These books are unfortunately lost, but we know that the author showed himself an ardent champion of the Arab civilisation represented by the ʿAbbāsid Caliphate, see Goldziher, *Muh. Stud.* i. 169 *et seq.* Al-Baghdādī however reproaches him with exalting the superiority of the clients over the Arabs (*al-Farḳ bain ʾl-Firaḳ*, p. 162). Next to the Arabs and the clients (Khorāsānians) Djāḥiẓ wished to consider the Turks the third pillar of the Caliphate. His treatise on the merits of the Turks (*Risāla fī Faḍāʾil al-Atrāk*, publ. by v. Vloten, Leiden 1903 in *Tria Opuscula, auct. al-Djāḥiẓ*) is a defence of the introduction of Turkish clients into the Muslim army. In the Book of Countries (*Kitāb al-Buldān*) he discussed the characteristics and advantages of the great metropolises of Mecca, Medina, Miṣr, Kūfa, Baṣra, Damascus, etc. He was not a professional geographer (cf. Masʿūdī, i. 206) and his observations, to judge by the fragments, dealt with the peoples rather than with the conditions of countries.

Djāḥiẓ was an anthropologist and naturalist with the restriction that his books aim not at making science but at arousing the reader's interest in it by making it attractive to him. Under this category we place his "Book of the Wheat and the Palm" (*Kitāb al-Zarʿ wa ʾl-Nakhl*), the "Book of Mongrels" (*Kitāb al-Ṣuraḥāʾ wa ʾl-Hudjanāʾ*), the "Book of Blacks and Whites" (*Kitāb al-Sūdān wa ʾl-Bīḍān*), the "Book of the Mule" (*Kitāb al-Baghl*), the "Book of Metals" (*Kitāb al-Maʿādin*). In the "Book of Women" (*Kitāb al-Nisāʾ*), he discussed the rather psychological question of the difference between man and woman, the special

aptitudes of the two sexes and the kind of life which suits them. In the book of questions (*Kitāb al-Masā'il*) he dealt with problems like the following: "Ought jealousy (*al-Ghīra*) to be considered a thing inherent in man or rather as an artificial product of civilisation which ought to be distinguished from pride (*Anafa*) and sense of honour (*Ḥamiya*)". The "Book of Animals" (*Kitāb al-Ḥayawān*, publ. at Cairo 1323-1324) is undoubtedly the most interesting of the works of Djāḥiẓ that survive. Like Abū Ḥanīfa's *Botany*, it is one of the first products of the budding study of nature among the Arabs. In spite of the quotations from Aristotle, there is very little in it that shows Greek influence. Quotations from poets occupy as much space as the author's own remarks. This fondness for *loci probantes* recalls the grammarians. The book is closely connected with theology by the author's effort to show the unity of nature and the equal value to the observer of its constituent parts; for he not only discusses the larger animals but even shows a kind of predilection for insects and very small creatures. In this book we find in the embryo stage theories (evolution, adaptation, animal psychology), the final development of which belongs to our times.

We might connect with the preceding category another series of works by Djāḥiẓ in which he dealt with the different classes of society. These books contain a moral and satirical element and therefore belong to the science of *Akhlāḳ*, [q. v., p. 231] founded by Djāḥiẓ. Such, for example, are: The "Book of Thieves", the „Book of Tricks of Trades" (*Kitāb Ghashsh al-Ṣanā'āt*) the "Book of Young Gallants" (*Kitāb al-Fityān*), the "Book of Overseers", the "Book of Schoolmasters", of "Scribes" and of "Singers". The following have survived: the "Book of Male and Female Slaves" (*Kitāb al-Djawārī wa 'l-Ghilmān*), the "Book of Songstresses" (*Kitāb al-Ḳiyān*). The "Book of Misers" (*Kitāb al-Bukhalā'*, publ. by v. Vloten, Leiden 1900), introduces us to the private life of the misers of Baṣra. The "Book of the Customs of the great Lords" (*Kitāb Akhlāḳ al-Mulūk*), of doubtful authenticity, contains a mass of interesting details on etiquette at the courts of the Persian kings and the Caliphs.

In Rhetoric, Djāḥiẓ attaches himself to the school of Ibn al-Muḳaffa, Sahl b. Hārūn, al-'Attābī etc., on whose style he modelled his own and in whose name he published several of his own works. Like them he composed "letters" (*Rasā'il*), short discourses on any subject, addressed to his patrons. In his better works of this class (*Risāla fi 'l-Ma'ād wa 'l-Ma'āsh, fi 'l-'Adāwa wa 'l-Ḥasad, fi 'l-Tarbī' wa 'l-Tadwīr*, etc.), the Arabic language attains a wealth of expression which it will never again reach without losing in vigour and depth. The "Book of Exposition and Demonstration" (*Kitāb al-Bayān wa 'l-Tabyīn*, Būlāḳ, 1313), was one of the last products of his pen. It is a vast compilation, a kind of anthology of Arab eloquence, in which selections from poets and orators are given to illustrate the often very original views of the author.

The faults of almost all the works of Djāḥiẓ are the want of order in the editing and arrangement of the matter, the digressions and a very pronounced fondness for isolated facts and anecdotes. To sum up, he was rather an observer than a thinker, a man of letters rather than a philosopher. In spite of his wit and the often surprising truth of his remarks, we can only place his works among the *Adabiyāt* (i. e. edifying and entertaining literature, science). For us the interest in his works apart from literary and grammatical interest mainly consists in the valuable materials he gives us on the public and private life, the customs and point of view of the Arabs of his time and preceding periods.

The influence of Djāḥiẓ on Arabic literature has been very considerable. Among his imitators may be mentioned his pupil al-Mubarrad, the author of the *Kāmil*, the geographer Ibn al-Faḳīh and the encyclopaedist Tha'ālibī. Baihaḳī's "Book of Advantages and Disadvantages" (*Kitāb al-Maḥāsin wa 'l-Masāwī*) and the "Book of Beauties and Antitheses" (Leyden 1898) are direct descendants of the school of Djāḥiẓ. Mas'ūdī had read him. He admired him and quotes him frequently. The influence of his *Kitāb al-Ḥayawān* on the treatises (*Rasā'il*) of the Ikhwān al-Ṣafā is a point which is quite worth careful investigation. The zoologists Ḳazwīnī, Damīrī, and the anonymous author of the British Museum Ms. (Add. 21,102) owe a great deal to Djāḥiẓ.

Bibliography: Brockelmann, *Gesch. der Arab. Litteratur*, i. 152 *et seq.* (where Nos. 3, 5, 7, 9, should be omitted); Arnold, *al-Mu'tazilah*, p. 38 *et seq.*; al-Baghdādī, *al-Farḳ baina 'l-Firaḳ*, p. 160 *et seq.*; Horten, *Die philos. DJAHLĀWĀN (from Balōčī Djahl = below, or southern), province of Balōčistān, lying below or S. of Sarawān, giving its name to one of the two great divisions of the Brahōī confederacy: area, 21,128 sq. m.; pop. (1901), 224,073, mostly Brahōīs, with here and there a few Balōč, and Lōrīs; capital, Khuzdār. It is mainly a grazing country, supporting vast numbers of sheep and goats, with some camels and a few horses.

Bibliography: *Baluchistan Gazetteer*, Vol. vi. B. (Bombay, 1907). (J. S. Cotton.)

DJAHM b. Ṣafwān Abū Muḥriz, a client of the Banū Rāsib, called al-Tirmidhī by some and al-Samarḳandī by others, a Muḥammadan theologian, who attached himself to Ḥārith b. Suraidj, the "man with the black banner", during the risings in Khorāsān towards the end of the Umaiyad period and was therefore put to death in 128 (745-746) by Salm b. Aḥwaz. As a theologian he occupies an independent position in as much as he agreed with the Murdjites on the one hand in teaching that belief is an affair of the heart and with the Mu'tazilites in denying all anthropomorphic attributes of God, but on the other hand he was one of the strongest defenders of *djabr*, (see the article Djabarīya, p. 985). He only allowed that God is all-powerful and the Creator because these are things which cannot be predicated of any created being. He further denied the eternity of Paradise and Hell. His followers, called *Djahmiya* after him, survived down to the xith century around Tirmidh but then adopted the doctrines of the Ash'arites.

der spekulativen Theologen im Islām, p. 135 (with further Bibliography).

DJAHWAR. The Banū Djahwar were an old-established influential Arab family in Cordova, which produced numerous scholars, jurists and particularly viziers. After the fall of the Umaiyads the shrewd vizier of the last of them, Abu 'l-Ḥazm Djahwar b. Muḥammad b. Djahwar made himself President of the republic or Regent (*Ra'īs*) of Cordova 422—435 = 1031—1043. Dozy (*Histoire*, iv. 298) makes his son Abu 'l-Walīd Muḥammad b. Djahwar reign from 1043—1064, while Lane-Poole, *Mohammadan Dynasties* gives his date as 435—450 = 1043—1058 and his son Abd al-Malik's correspondingly 1064—1070 or 450—461 = 1058—1068, while on the other hand Ibn Bashkuwāl (died 578 = 1183) in his *Ṣila* (Djahwar, N⁰. 297) says that Muḥammad b. Djahwar (N⁰. 1068) died in Saltes (Shaltīsh) in the middle of Shawwāl 462 = 28th July 1070 (interned by the ʿAbbādid al-Muʿtamid of Seville) and does not mention his son ʿAbd al-Malik at all. In Vives y Escudero's *Monedas de las Dinastias Arábigo-Españolas*, (p. 227) two Arabic coins struck in Cordova in 400 = 1048-1049, are given, which are ascribed to the Djahwarids. In addition to quite brief notices, which give but little information, there is only an extract of some length in al-Maḳḳarī, i. 192—194, taken from al-Fatḥ b. Khāḳān's *al-Maṭmaḥ* (Constantinople 1302, 14 *et seq.*) with which the brief history of three Djahwarids in Ibn Khaldūn's *Kitāb al-ʿIbar* (Būlāḳ 1284 = 1867), iv. 159 may be compared. (C. F. Seybold.)

DJAIDŪR, Djēdūr, is the name now given to the district east of northern Djōlān (cf. the article djawlān) separated from it by the upper Nahr al-Ruḳḳād. Al-Nuḳra is its southern continuation. It is only rarely mentioned by Arab authors. Yāḳūt distinguishes it from Djawlān but adds that others combine the two districts. He also mentions it as the district in which lay al-Djābiya [q. v., p. 988]. His statements are however, as for these districts in general, somewhat unreliable, for he says that the towns of Ṣanamān, north of al-Djābiya, and Nawā, not far to the southeast of the latter, are in the province of Ḥawrān. Abu 'l-Fidā' on the other hand says that Nawā is a town in Djaidūr. The district was in the province of Damascus.

Bibliography: Yāḳūt, *al-Muʿdjam*, ii. 3, 173, 429; iv. 715; Abu 'l-Fidā', *Géographie* (par Reinaud et de Slane), p. 253; Nöldeke in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxix. 428; Schumacher in the *Zeitschr. d. Deutsch. Palästina-Vereins*, ix. 202. (Fr. Buhl.)

DJAIḤĀN, in later times also written Djāhān (according to the Armenian pronunciation?), the Arabic name of the Pyramus, the eastern of the two rivers which flow through the Cilician plains. The Djaiḥān rises in a powerful spring not far from Albistān (cf. v. Moltke, *Briefe über Zustände .... in der Türkei*⁶, Berlin, 1893, p. 347) but soon is joined by tributaries which drain an extensive area. Near Marʿash, where it receives the Aḳ Ṣu from the east, the river changes the southern course which it has on the whole held for a southeasterly one, and flows through the Cilician plains past al-Maṣṣīṣa where it is crossed by an ancient bridge often mentioned in literature. Its principal mouth, which has frequently changed in course of centuries on account of the silting up of the delta, is now in a bay west of Ayās after a sharp turn to the east.

Although in the Umaiyad period the lands on the Djaiḥān formed the boundary with Byzantine territory, the river — now usually called Djīhān — did not become particularly celebrated till the Mamlūk period, when it gave its name to the lands conquered by al-Nāṣir Muḥammad b. Ḳalāʾūn from the Armenian kingdom of Cilicia: *al-Futūḥāt al-Djāhāniya* "the conquests on the Djāhān". It separated the Futūḥāt al-Djāhāniya in the narrower sense, the capital of which was Ayās, from the *Bilād al-Durūb* (see the article darb).

Hartmann.)

DJAIḤŪN, Arabic and modern Persian name of the Āmū-Daryā [q. v., p. 339].

DJAIPUR, state in Rādjpūtāna, India: area, 15,579 sq. m.; pop. (1911) 2,636,647, of whom 7% are Muhammadans; revenue, about £ 440,000; tribute, £ 27,000. The chief is the head of the Kachwāhā clan of Rādjpūts, who fixed their capital at Ambēr about 1150. The family was always allied to the Mughal emperors, in war and by marriage. Both Akbar and Djahāngīr took to wife daughters of the house. Rādjā Mān Singh was Akbar's most trusted Hindu general; and Rādjā Djai Singh I, known as Mīrzā Rādjā, played a prominent part in Awrangzēb's campaigns in the Deccan. But the most illustrious of the line was Djai Singh II (1699—1743), known as Sawāʾī (= "one and a quarter"), being by a quarter superior to any of his contemporaries — a title borne by all his descendants. Skilled in mathematics and astronomy, he erected observatories, which still exist, at Dihlī, Benares, Udjain, and Muttra. He also collated lists of stars in the *Zīdj Muḥammad Shāhī*, called after the Mughal emperor of the time. It was he who moved the capital from Ambēr, and laid out the city of Djaipur on regular lines: pop. (1911), 137,098, of whom 25% are Muhammadans.

al-**DJAIṬĀLĪ** (var. al-Djaṭālī), Abū Ṭāhir Ismāʿīl b. Mūsā, of Ḳaṣr Idjaiṭāl in the Djebel Nefūsa, an Abāḍī scholar, famous for his marvellous memory, taught law, literature and poetry at Masghūra. He was the author of numerous works, including the *Ḳawāʿid al-Islām*, a book which under the name *ʿAḳīda* is still the canon of the Abāḍīs of Djebel Nefūsa (published at Cairo with the commentary of Abū ʿAbd Allāh Muḥammad al-Kashī), the *Ḳanāṭir*, a religious encyclopaedia in several volumes, which contains a mass of anecdotes, proverbs and quotations (likewise published in Cairo). He was thrown into prison by the Emir of Tripoli for certain violent

proposals, but liberated on the intervention of Ibn Makkī, governor of Gabes, to whom he had addressed a flattering poem of which however he afterwards disowned the authorship. On leaving Tripoli, he cursed the town; when it fell into the hands of the Christians (795 = 1394) this was regarded as the effect of his curse. He retired to Djerba where he died in 750 (1349-1350) according to al-Shammākhī, or in 730 (1329-1330) according to Abū Rās, and was buried in the great mosque.

Bibliography: Al-Shammākhī, *Kitāb al-Siyar* (Cairo n. d.), p. 556—559; Abū Rās, *Ta'rīkh Djazīra Djerba*, ed. and tr. Exiga (Tunis, 1884), p. 8 of the text; de Motylinski, *Le Djebel Nefousa* (Paris, 1898-1899), p. 94—96, note 3; R. Basset, *Les Sanctuaires du Djebel Nefousa* (Paris, 1899), p. 93-94.

(René Basset.)

DJĀ'IZ (literally "passing") is commonly reckoned as one of the Five Orders (*al-Aḥkām al-Khamsa*; best in Goldziher, *Zahiriten*, pp. 66 *et seq.*, see also *Dict. tech. terms*, i, pp. 379 *et seq.*) and as synonymous with *mubāḥ* "permitted", an action legally indifferent, neither forbidden nor commanded nor recommended, the doing of which will not be rewarded, nor the omission punished. But *Djā'iz* is much wider, and from its meaning of "current", "allowable", covers not only *mubāḥ* but anything not legally hindered, thus *wādjib*, *mandūb* and *makrūh*. Further, it can be taken intellectually as well as legally and mean what is not unthinkable, whether necessary, probable, improbable or possible (*Dict. of Techn. Terms*, i, pp. 207 *et seq.*).

(D. B. Macdonald.)

DJAKĀT. [See Zakāt.]

DJALĀIR, a Mongol tribe, cf. the article Mongols. Ḥasan Buzurg [q. v.] belonged to this tribe and Djalāir is therefore also used as the name for the dynasty founded by him in Baghdād, which began on the death of Abū Sa'īd in 736 (1335) and was replaced in 1411 by that of the Kara Ḳuyūnlū. Ḥasan, who died in 757 (1356) was followed by his son Shaikh Uwais [q. v.] till 776 (1374), the latter by his sons Ḥusain (d. 784 = 1382-1383), Sulṭān Aḥmad (d. 813 = 1410), and Bāyazīd and by other descendants. The end of the dynasty was brought about by the campaigns of the world-conqueror Tīmūr [q. v.]. Cf. Cl. Huart, *Mémoire sur la fin de la Dynastie des Ilkhaniens*.

DJALĀL (A.), "Majesty", "eminence".

DJALĀL, Bukhārī, Saiyid, commonly known as Shaikh Djalāl or Makhdūm-i-Djahāniyān, was the son of Saiyid Aḥmad b. Saiyid Djalāl al-Dīn, Bukhārī, and was born in 707 A. H. (= 1307 A. D.). He received his spiritual training from his father and from Shaikh Rukn al-Dīn, a grandson of Bahā' al-Dīn Zakariyā [q. v.]; he was made a *khalīfa*, first in the Suhrawardī, and afterwards in the Čishtī order. He died in 785 A. H. (= 1383 A. D.) and was buried at Ūčh, where his grave is still an object of veneration. His followers, who call themselves Djalālī, are vagabond faḳīrs, with no fixed dwelling-places; they pay little attention to prayer, drink bhang (Indian hemp), and eat snakes and scorpions; they shave their beards, moustaches and eyebrows, and wear glass armlets and a woollen cord round the neck. They are found in scattered groups in Northern India and are said to be common in Central Asia.

Bibliography: Dārā Shikōh, *Safīnat al-awliyā*, s. v.; Ḥāmid Djamālī, *Siyar al-'ārifīn*, s. v.; Abū 'l-Faḍl, *Ā'īn-i-Akbarī* (ed. Blochmann), ii, 218-219; *Census of India*, 1891, vol. xix, p. 195-196.

DJALĀL al-DAWLA, an honorary title borne by several rulers, for example — in addition to the Būyid given below, — the Ghaznawid Muḥammad [q. v.] and the Mirdāsid Naṣr [q. v.].

DJALĀL al-DAWLA Abū Ṭāhir b. Bahā' al-Dawla, a Būyid, born in 383 = 993-994. When Sulṭān al-Dawla was appointed Amīr al-Umarā' on the death of his father Bahā' al-Dawla in 403 = 1012, he allotted the governorship of Baṣra to his brother Djalāl al-Dawla. The latter remained here for several years without taking any part in the dissensions within the Būyid family. In 415 = 1024-1025 Sulṭān al-Dawla died and his brother Musharrif al-Dawla also died in the following year. Djalāl al-Dawla was then proclaimed Amīr al-Umarā'; but when he did not appear in Baṣra to take up his new office, Abū Kālīdjār, a son of Sulṭān al-Dawla, was applied to, but he was as little able to undertake the office. When Djalāl al-Dawla learned that his name was no longer mentioned in the *Khuṭba*, he advanced on Baghdād with an army, but was defeated and had to retire to Baṣra. In Ramaḍān 418 = October 1027 he appeared in the capital however, in answer to an invitation from the Turks who could not come to terms with the people of Baghdād and feared the influence of the Arabs. But friendly relations with the Turks were not long maintained. By the following year a revolution broke out in Baghdād and Djalāl al-Dawla was only able to restore order with difficulty at the same time. Abū Kālīdjār won Baṣra without striking a blow, and in 420 = 1029 he succeeded in gaining possession of Wāsiṭ also. But when Djalāl al-Dawla made a raid on al-Ahwāz, Abū Kālīdjār wished to enter into negotiations for peace; Djalāl al-Dawla, however, preferred to sack al-Ahwāz and carried off the women of Abū Kālīdjār's family prisoners. At the end of Rabī' I 421 = April 1030, Abū Kālīdjār advanced against Djalāl al-Dawla but was defeated after a three days battle and had to take to flight, while the latter occupied Wāsiṭ and then entered Baghdād. Baṣra also was taken but soon re-occupied by Abū Kālīdjār's troops. In Shawwāl (October) of the same year, the latter were again defeated at al-Madhār. This town fell into the enemy's hands but when Abū Kālīdjār sent reinforcements, Djalāl al-Dawla's supporters were driven out again. In the capital the insubordination of the Turkish mercenaries continued to increase and the Amīr al-Umarā' soon lost the last remnants of his power. In 423 = 1032, Djalāl al-Dawla's palace was sacked, and the only course left for him was to flee the town and go to 'Ukbarā, while Abū Kālīdjār was proclaimed Amīr al-Umarā' by the Turks in Baghdād. The latter at this time was in al-Ahwāz and as he had no particular ambition for the Amīrate, Djalāl al-Dawla was able to return to the capital about six weeks later where however matters went from bad to worse. In the following year his palace was again stormed and plundered, and for a second time the now quite helpless Būyid had to flee. This time he went to al-Karkh, where he was protected by the Shī'is, and he remained here till the rebels invited him back to Baghdād. In

the same year Abu 'l-Ḳāsim governor of Baṣra rebelled against Abū Kālīdjār because the latter intended to depose him, and invited Djalāl al-Dawla's son al-Malik al-ʿAzīz to Baṣra. But the latter was driven out in 425 = 1033-1034 and homage was again paid to Abū Kālīdjār in Baṣra. In the capital unbridled anarchy reigned and in 427 = 1035-1036 another mutiny broke out in the army, which was however put down by the intervention of the Caliph. In 428 = 1036-1037 Barsṭughan, one of the most powerful Turkish chiefs in Baghdād, whose position was threatened, called in the help of Abū Kālīdjār. Djalāl al-Dawla was once more driven out of Baghdād; but when he received support from Ḳirwāsh b. al-Muḳallid of Mosul and Dubais b. ʿAlī of Ḥilla and the Dailamites in Baghdād quarrelled with the Turks, he was soon able to drive out Barsṭughan and occupy the capital. Barsṭughan was captured and put to death while Abū Kālīdjār ultimately made peace with Djalāl al-Dawla. Their final reconciliation was sealed by the marriage of one of the latter's daughters with Abū Manṣūr, a son of Abū Kālīdjār. About the same time Djalāl al-Dawla assumed the ancient Persian title "King of Kings", which little corresponded with his own impotence and the general chaos. In 431 = 1039-1040 or according to others 432 = 1040-1041, he had to put down another Turkish mutiny in the capital. Djalāl al-Dawla died on the 6th Shaʿbān 435 = 9th March 1044. It was his reign that brought the Būyid kingdom to its lowest depths of humiliation.

Bibliography: Ibn al-Athīr (ed. Tornb.), ix. 169—395; Ibn Khaldūn, *ʿIbar*, iv. 470 *et seq.*; Wilken, *Mirkhond's Gesch. der Sultane aus d. Geschl. Bujeh*, Chap. xvi.—xvii.; Weil, *Gesch. d. Chalifen*, iii. 52 *et seq.*

(K. V. ZETTERSTÉEN.)

DJALĀL AL-DĪN MANGUBARTI, the last of the Khwārimshāhs, was the eldest son of Muḥammad and had been allotted by his father the Ghōrid lands he had conquered with the capital Ghazna, while another son Uzlagshāh was appointed his successor. The Mongol conquest under Čingiz Khān [q. v., p. 856] rendered these dispositions worthless, for Muḥammad is said to have recognised before his death in 617 (December 1220 or January 1221) that only a valiant warrior like Djalāl al-Dīn was fitted to rule the kingdom in the dangerous situation in which it then was. But this did not please certain Turkish Amīrs, who when Djalāl al-Dīn had come to Mangishlak with his two brothers Uzlagshāh and Aḳshāh from his father's deathbed on an island near Abaskūn [q. v., p. 6], formed a conspiracy to seize and kill him. Djalāl al-Dīn was just able to escape this danger by taking flight to Khorāsān, whither his brothers followed him, because the Mongols made any long stay in Khwārizm impossible. But while his brothers were captured by the Mongols on the way and slain, Djalāl al-Dīn succeeded in escaping via Nīshāpūr, Zuzan and Bust to Ghazna. There he collected an army around him again and put to flight a body of Mongols not far from Parwān, but when a considerable body of his troops soon afterwards left him, Djalāl al-Dīn, continually pursued by the Mongols, had to escape to India. He was overtaken by hostile troops on the bank of the Indus but escaped after a valiant defence by himself and his men by plunging his horse into the river and successfully swimming to the other side (Nov. 1221).

Djalāl al-Dīn remained in India for about three years. During this period he had many stirring adventures with the Indian rulers Shams al-Dīn Iltutmish [q. v.] and Ḳarādja, which we must pass over here, and then went to Kermān in 621 (1224) where Burāḳ Ḥādjib [q. v., p. 793] had made himself ruler. The latter submitted to Djalāl al-Dīn and was confirmed by him as governor of this province. Djalāl al-Dīn himself continued his journey to Fārs and the Persian ʿIrāḳ, where his brother Ghiyāth al-Dīn Pīrshāh ruled, but soon found himself forced to submit to Djalāl al-Dīn. Čingiz-Khān had in the meantime gone back to Mongolia, but Djalāl al-Dīn did not think of using the opportunity to restore peace and order to the devastated lands, that his fathers had once ruled. On the contrary he quarrelled with the ʿAbbāsid Caliph al-Nāṣir, and with Uzbeg [q. v.], the Atabeg of Ādharbaidjān, and thought it his duty to fight the infidel Georgians. During these continual campaigns the Mongols again appeared in the lands of Islām and when Djalāl al-Dīn was preparing to fight them, he quarrelled with his brother Ghiyāth al-Dīn, who left him with his troops and retired to Kermān in 625 (1228), where he met his death through the intrigues of Burāḳ Ḥādjib. The result was that though Djalāl al-Dīn was defeated in the battle with the Mongols, the latter suffered such heavy losses that they did not continue the war but retired again. Djalāl al-Dīn's power thus remained unaffected and he found nothing more pressing to do than renew the siege of Khilāṭ in 626 (1229) which belonged to the Aiyūbid al-Ashraf [q. v., p. 484], which he previously attempted to take. This time he was successful in taking the town, though after a six months' siege. The negotiations, which he entered into during this period with the Saldjūḳ of Asia Minor, Kaiḳubād I., were so far from being successful in their object that the latter took the side of al-Ashraf and the two princes took the field against him, which resulted in his being severely defeated in 627 (1230) near Arzandjān. But peace was soon afterwards agreed to in view of the common danger from the Mongols, but when in the following year the Mongols actually appeared again, Djalāl al-Dīn was not able to collect an army to drive them back. Accompanied by a few faithful followers he was able to escape his enemies, who followed him everywhere, for a period, till he was finally captured by a Kurd and while he was living in the latter's house murdered by another Kurd in 628 (1231).

DJALĀL AL-DĪN RŪMĪ, one of the great mystic poets of Islām, was born at Balkh in 604 (1207). His family claimed descent from Abū Bakr and was connected by marriage with

the royal family of Kh̲wārizm. When three years of age (607 = 1210), he was taken by his father to Nishāpūr and presented to the aged ʿAṭṭār. The latter, according to the legend, predicted his future greatness and gave him his *Book of Secrets*. His father Bahāʾ al-Dīn Walad had to leave Balkh at this time, because he had incurred the wrath of the ruler Muḥammad Kuṭb al-Dīn Kh̲wārizm-shāh. He took the young Djalāl al-Dīn with him and after visiting Baghdād, Mecca, Damascus, Malaṭyā, Arzandjān and Larenda finally settled in Ḳōniya about 1226 or 1227 (623—625) where he found a protector in the person of the Saldjūḳ prince ʿAlāʾ al-Dīn Kaiḳubād. He was appointed professor there and on his death in 628 (1230-1231), Djalāl al-Dīn succeeded him in the chair; he never again left Ḳōniya except for a short journey.

The event, which had the greatest influence on his intellectual and moral life, was his meeting with the Ṣūfī Shams al-Dīn Tabrīzī. The latter in the course of his wanderings, came to Ḳōniya; there he saw Djalāl al-Dīn, on whom he exercised a powerful influence. Rūmī acknowledged what he owed to his master by dedicating a great part of his works to him. As a result of this meeting, he abandoned the study of sciences in order to devote himself entirely to mysticism. He founded the order of Mawlawīs or "dancing dervishes"; contrary to the general Muslim practice he gave a considerable place to music in the ceremonies of the order. He died at Ḳōniya in 672 (1273).

His tomb is in the monastery founded by him. The architecture [see this article p. 422] of this *tekke* is of remarkable delicacy and beauty; the mosque is adorned with carved candelabra, valuable tapestries, embroideries and beautifully engraved inscriptions. His successors are interred near Djalāl al-Dīn. The order has always had at its head one of his descendants who lives in Ḳōniya; he is called the Čelebi [q. v., p. 831]. Djalāl al-Dīn is often invoked under the title *Mawlānā*.

Al-Rūmī's principal work is the *Mathnawī*, a vast poem in six books, a mixture of fables, anecdotes, symbols and reflections intended to illustrate and explain Ṣūfī doctrines; he took forty years to compose it. He also wrote a *Dīwān* and a prose treatise entitled *Fīhi mā fīhi* "what is within is within"; this last work which is unknown in Persia is to be found in several Stambul libraries. Djalāl al-Dīn is a poet of the first rank; he possesses the most diverse qualities: variety and originality of imagery, dignity and picturesqueness, learning and charm, depth of feeling and of thought. The composition of the *Mathnawī* is, it must be granted, very disjointed; the stories follow one another in no order; the examples suggest reflections which in their turn suggest reflections which in their turn suggest others so that the narrative is often interrupted by long digressions; but this want of order seems to be a result of the lyrical inspiration, which carries the poet along as if by leaps and bounds, and if the reader yields to it, the effect is by no means displeasing. It would be fatiguing to read the book right through, but if one opens this immense poem by chance and reads a few pages, one cannot fail to be deeply impressed.

As a philosopher, al-Rūmī is less original than as a poet. His teaching is that of Ṣūfism, expressed with glowing enthusiasm; it is not systematically expounded and the thought is sometimes carried away by the lyrical fervour; to reconstruct this philosophy, it would be necessary to collect the elements, which are scattered throughout the book and formulate a number of principles from them.

As amongst other Ṣūfī writers, many Neo-Platonic ideas are found in Rūmī; others are closely allied to those of Christian mystics; some are very boldly expressed which may be excused on account of the poetic form. As an example of the last we note this thought, delicate enough in theodicy, that even evil contributes to the glory of God, that it makes part of his perfection; a painter who wishes to represent the ugly, shows skill if he renders it in a hideous fashion: "The ugly says: O King, Creator of the ugly, you are as powerful in the beautiful as in the ugly which is despised". — Another very bold idea is that of an old Shaikh who says to the Ṣūfī Bāyazīd, when he was going on a pilgrimage: Go around me; that will be equivalent to going round the Kaʿba; "although the Kaʿba is the house of God, destined by him for the accomplishment of religious rites, my being is superior to it as the house of his secrets". — The episode of Moses and the herdsman has often been quoted, in which the author appears to teach that the manner of expressing the religious feeling is of no importance, that rites and formulae are nothing and that the feeling is everything: "What can words do for me"? says God to Moses, "it is a glowing heart that I want; inflame the hearts with love and pay no heed to thought or expression".

Another well known passage is one that contains a kind of doctrine of transmigration: "I die as a stone and become a plant; I die as a plant and am raised to the rank of an animal; I die as an animal and am reborn man... dying as man, I shall come to life again an angel... I shall even transcend the angel to become something no man has seen, and then I shall be the Nothing, the Nothing". And lastly this apparently pantheistic fragment, in which the poet identifies himself with all nature: "I am the mote in the sunbeam; I am the ball of the sun; I am the glow of morning; I am the breath of evening, etc.".

DJALĀLĀBĀD, town in Afghānistān, near the Kābul river, almost half-way on the main route from Peshāwar to Kābul, headquarters of a large district of the same name: permanent pop. estimated at only 2,000, but this number increases ten-fold during the winter, when the Amīr often takes up his residence here in a fine palace built in 1892. It takes its name from the Mughal emperor Djalāl al-Dīn Akbar, who is said to have founded it in 1570 A. D. It is famous in history for the defence of the garrison under General Sale during the winter of 1841—1842, when the rest of the British army had been destroyed.

DJALĀLĪ i. e. *al-Ta'rīkh al-Djalālī*, Pers. *Ta'rīkh-i Djalālī* = the Djalālī calendar, also *Ta'rīkh-i Malikī*, so-called after the Saldjūḳ Sulṭān Malik Shāh b. Alp Arslān, who in 467 (1074-1075) called a conference of astronomers, among whom was the famous mathematician and poet 'Omar b. Ibrāhīm al-Khaiyāmī [q. v.], at his newly erected observatory (the site is uncertain, Iṣfahān, Raiy or Nīshāpūr are possible) and commissioned them to regulate the ancient Persian calendar again and bring it more into agreement with the results of astronomical observations and calculations. The existing Persian system (the era of Yezdegird) was as follows: the year had 12 months of 30 days each and the five odd days (*al-mustaraḳa*, Pers. *andargāh*) were added to the eighth month (Ābān) as intercalary days. But as the year has approximately 365¼ days, the error amounted to one day every four years and one month in 120 years so that one month was intercalated every 120 years and the 120th year therefore had 13 months (for the various views on this intercalation see the sources quoted below). In this calendar, which was however driven much out of use by the Muḥammadan after the Arab conquest, the error was the same as in the Julian but it was inferior to the latter in this respect that an adjustment was not made every four years but only every 120 years. — We are not quite clear as to what change was made by Djalāl al-Dīn's astronomers. Authorities are only agreed that they retained the 12 months with their 30 days each and their old names, as well as the five intercalary days, but these were added at the end of the twelfth month (*Aspandārmudh*, Arab. *Isfandārmadh*) and that a further intercalary day was now inserted every four years (where is not known, probably after the five days). Two different and not quite clear accounts exist of the institution of the cycle after the expiry of which an adjustment with the true time would be reached: according to Ulūgh Beg (died 1449) when this intercalation (one day every four years) had been repeated six or seven times, it was postponed to the fifth year (instead of to the fourth); according to Ḳuṭb al-Dīn al-Shīrāzī (died 1311) it was not postponed till the fifth year until the seventh or eighth time. This statement cannot be otherwise interpreted than as has been done by Ideler and other scholars, namely, that from the beginning of the era the years 4., 8., 12., 16., 20., 24. (according to al-Shīrāzī 28. also) were leap years of 366 days, but after that the next leap year was 29. (or 33.), followed by 33., 37., 41., 45., 49., 53., 57., then the next leap year was not till 62. (according to al-Shīrāzī 37., 41., 45., 49., 53., 57., 61., 65., and then 70.); the cycle was then repeated again in the same way. According to Ulūgh Beg, whose account is probably the correct one, there would be 15 intercalary days in 62 years, which would give an average year of 365, 241 935 days (the correct length is 365, 2422), the error would therefore be one day in about 3770 years, while in the Gregorian calendar it is one day in about 3330 years. The Djalālī calendar would thus be somewhat more accurate than ours, not as Ideler has stated, less accurate, because it has taken the average length of the tropic year c. 2″ too long. On the other hand he is right when he says it is somewhat too complicated; but on the other hand the equation to true time is made in a much briefer period than in the Gregorian calendar, viz. in 62 instead of 400 years. — If Ḳuṭb al-Dīn al-Shīrāzī's account were the correct one, there would be 17 intercalated days in 70 years, which would give an average year of 365,24285 days, with an error of one day in c. 1540 years. — In his translation of the *Prolegomena* to Ulūgh Beg's tables L. A. Sédillot has thought the accuracy of the Djalālī calendar was still higher, but here he is wrong; he assumed a cycle of 101 years with 39 intercalated days, which gives an average year of 365,242235 days, so that an error of one day would not be made for 28,000 years. Although 39 intercalary days appear in 101 years of the Persian calendar, this number does not however complete a cycle, which is only done by 3×62 or 186 years and the 25 years which follow the 101, increase the error with their 6 intercalary days. — The *Annuaire du Bureau des Longitudes*, (for 1851) and following it a number of modern astronomers thought that a cycle of 33 years with 8 intercalated days could be recognised in the Persian calendar, which would have been the most accurate of the calendars yet devised, with an error of only one day in c. 5000 years. This cycle was obtained by the assumption that a intercalary day was inserted every four years for seven times and for the eighth time only after the fifth year; this result cannot be obtained from the statements of Ulūgh Beg and Ḳuṭb al-Dīn, as we possess them; but it is by no means impossible that errors may have crept into these accounts and that both of them should read: "when this intercalation has been repeated six to eight times", in place of "six to seven times" or "seven to eight times"; for in Persian the numerals *haft* (7) and *hasht* (8) are easily confused, as in Arabic are the figures for 6 and 7 (the letters *wāw* and *zāi*). We would thus have 16 intercalated days in 66 years, or 8 in 33, which is the same thing. But it is not easy to understand why the Persian astronomers should have decided on the complicated method if they could obtain the same accuracy with the simpler mode. But on the other hand we must grant that the table in the Prolegomena to Ulūgh Beg's tables, for the sum of the days in the years 1 to 1000,

agrees better with the assumption of 8 intercalated days in 33 years than with that of 15 in 62 years. Ginzel has proposed another hypothesis which Matzka has given in his *Die Chronologie in ihrem ganzem Umfange* (Vienna, 1844), namely, that there were seven cycles of 33 years with 8 intercalated days in each cycle combined with a 37 year cycle with 9 intercalated days; this gave an average year of 365,242537, which agrees to five decimal places with that given by Ulūgh Beg. — The Persian astronomers took as the New Year's Day (Nawrūz) i. e. as the beginning of the new era, the 10[th] Ramaḍān 471 A. H. = 15[th] March 1079, on which day the sun entered the sign of the Ram. Whether this era ever attained any vogue alongside of the Muḥammadan, and how long it survived, cannot be ascertained from the authorities; Ideler however mentions that the poet Saʿdī (d. 1263) in his *Gulistān* praises the month Ardibahisht Djalālī, i. e. the second month of the Djalālī year (middle of April to the middle of May) as the finest season of the year.

DJALĀLZĀDE MUṢṬAFĀ ČELEBI, known as KOḎJA NISHĀNDJI, belonged to Tossia in Asia Minor where his father held the office of Ḳāḍī, entered the service of the state in the reign of Selīm I as a clerk in the Imperial Dīwān, accompanied the Grand Vizier Ibrāhīm Pasha on his mission to Egypt in 930 (1524) (v. Hammer, *Geschichte des Osm. Reich.*, iii. 39 *et seq.*) and on his return was appointed Raʾīs al-Kuttāb (Secretary of State). In 941 (1535) he accompanied Sulaimān I on the Persian campaign and was promoted on this occasion to be Nishāndji (Keeper of the Great Seal, *tewḳīʿī*), which office he held till 964 (1556-1557), supported by the favour of Ibrāhīm Pasha, whose confidant he had become, and of the Sulṭān. In this year, while holding the office of *muteferrikabashi* (chief king's messenger) he resigned that of *nishāndji*, at the instigation, it is said, of the Grand Vizier Rustam Pasha who was not well disposed to him. During Sulaimān I's last Hungarian campaign in 974 (1566), on which he accompanied him as *muteferrikabashi*, he was again appointed to the office of Nishāndji; he only survived the Sulṭān a year and died in Rabīʿ ii. 975 (beginning 5[th] October 1567; cf. the chronogram in his epitaph in *Ḥadīḳat al-Djawāmīʿ*, i. 295). The Turks speak highly of Djalālzāde as a brilliant stylist and an extremely capable official. In the offices of Raʾīs Efendi and Nishāndji he was entrusted with important negotiations with foreign states (v. Hammer, *Gesch. d. Osm. R.*, iii. 131, 159; Corneille de Schepper, *Missions Dipl.*, 137 = Gway, *Urkunden*, etc., ii. 1, p. 20) and obtained an insight into all the branches of the history of the state. He took advantage of his opportunities to write a history of Sulaimān I, planned on a large scale, the *Ṭabaḳāt al-Mamālik wa Daradjāt al-Masālik*, only a part of which was completed; it comes down to the year 962 and the author had finished the earlier parts by 941 A. H. (v. Hammer, *Gesch. d. Osm. R.*, iii. 158 *et seq.*). We also possess from his pen a very remarkable history of Selīm I (*Maʾāthir Selīm-Khān*); considerable extracts have survived of his edition of the laws *Ḳānūn-Nāme*, which Ewliyā Efendi, i. 171, and Pečewi, i. 43, mention as a separate work. A translation of Maskīn's Persian biography of the Prophet, *Maʿāridj al-Nubūwa wa Maʿāridj al-Futūwa* and an ethical work *Mawāhib al-Khallāḳ fī Marātib al-Akhlāḳ* are also ascribed to him. His poems, in which he calls himself Nishānī, are scattered throughout his historical works. He built a mosque in the Aiyūb suburb, which is known as the Mosque of Nishāndji (*Ḥadīḳat, loc. cit.*).

Bibliography: In addition to the works quoted: Rieu, *Cat. of the Turk. Manuscr. in the Br. Mus.*, p. 49 *et seq.*; Khalīfat ul-Ruesā, p. 5 *et seq.*; *Laṭīfī*, 335 (ed. 1314 H.); Tashköprüzāde, ii. 105. (J. H. MORDTMANN.)

DJALĪLĪ, a Turkish poet of Brusa, who had adopted the same *makhlaṣ* as two of his less known predecessors, the one of whom belonged to Brusa, and the other to Adrianople. He was the son of Ḥamīdī and was long in Constantinople the poet Āhī's inseparable companion in his debauches; in his native place he was looked upon as a madman. He lived in the reign of Sulṭān Sulaimān I, was the contemporary of Bāḳī [q. v., p. 603] and left two long poems in couplets, *Laila u Madjnūn* and *Khusraw u Shīrīn*; his numerous ghazals are collected under the title *Gul-i ṣad berg*; "the Hundred-leaved Rose". A translation of the *Shāhnāmah* ascribed to him probably never existed.

Bibliography: v. Hammer, *Geschichte der Osm. Dichtkunst*, ii. 398; Gibb, *History of Ottoman Poetry*, iii. 159. (CL. HUART.)

DJALŪLĀ, (also DJALŪLĀʾ), a town in the ʿIrāḳ (Babylonia) and, in the mediaeval division of this province, the capital of a district (*ṭassūdj*) of the circle Shādh-Ḳubādh in the Eastern Tigris valley. Djalūlā was a station on the important Khorāsān road, the main route between Babylonia and Īrān and was about equally distant (7 parasangs = 28 miles) from Dastadjird [q. v., p. 926] in the S. W. and Khāniḳīn in the N. E.; it was watered by a canal from the Diyāla [q. v., p. 981] (called Nahr Djalūlā), which again joined the main stream farther down at Bādjisrā [q. v., p. 558]. Near this town, which seems from the statements of the Arab geographers to have been quite unimportant, a severe defeat was inflicted by the Arabs on the army of the Sāsānian king at the end of the year 16 (= 637 A. D.).

According to Mustawfī (c. 740 = 1340), the Saldjūḳ Sulṭān Malikshāh (465—485 = 1073—1092) built a watch-house (*ribāṭ*, popularly *rubāṭ*) which probably also served as a caravanserai in Djalūlā; after his time the place was usually called Ribāṭ Djalūlā. This statement helps us to locate the site of Djalūlā with certainty; for there can be no doubt that Ribāṭ Djalūlā is to be identified with the modern Ḳizil-robāṭ; besides, the distances, given by the Arab geographers for Djalūlā, also suit Ḳizil-robāṭ; its geographical position is: 34° 10′ N. Lat., 45° E. Long. (Greenw.); it lies within the mountains, at the east end of the pass through the Djebel Ḥamrīn. The Diyālā flows past at some distance to the east of the town. The name Ḳizilrobāṭ, popularly corrupted

also to Ḳazilābādh and Ḳazrābādh (cf. Petermann, *Reisen im Orient*, ii. 274), or abbreviated to Ḳizrabāṭ (cf. Herzfeld, in *Petermanns Geogr. Mitteil.*, 1907, p. 51) means "the Red Caravanserai". Like its mediaeval predecessor, the modern Ḳizilrobāṭ, is only of moderate importance.

Bibliography: See the statements in BA'ḲŪBĀ; also Streck, *Babylonien nach den Arab. Geograph.*, i. 8, 15; Le Strange, *The Lands of the East. Caliphate* (1905), p. 62; and on Ḳizilrobāṭ cf. Ritter, *Erdkunde*, ix. 418, 489; Ker Porter, *Reisen in Georgien, Persien und Armenien* etc. ii. (Weimar 1833), p. 234 *et seq.* (M. STRECK.)

DJĀLŪT, the Goliath of the Bible. Muslim tradition has somewhat increased his importance, for in addition to the well known story of David's fight with him, several other episodes from various chapters of the Bible, relating to the wars of the Israelites with the Midianites and Philistines, are connected with his name.

The Ḳor'ān briefly narrates how Djālūt attacked Ṭālūt (Saul) and how he was killed by David (ii. 250—252). It places in this campaign the story of the soldiers who were tested by their manner of drinking at the crossing of a river, an episode which really refers to an expedition of Gideon against the Midianites (*Judges*, vii.).

According to Mas'ūdī (*Prairies d'Or*, iii. 241) Palestine was originally inhabited by Berbers and Djālūt was the name borne by the Berber Kings down to the one who was killed by David. This last king was, according to Mas'ūdī, a son of Mālūd, son of Dabāl, son of Ḥattān, son of Fāris; he invaded the lands of the Israelites with several Berber tribes. The same author gives the episode of the crossing of the river as in the Ḳor'ān and adds that David slew Goliath "with his sling", which is not stated in the Ḳor'ān. This incident took place at Baisān in the Ghōr or lower valley of the Jordan. Near Baisān are a spring and a valley, which are actually called Goliath's Spring and valley (*'Ain Djālūt*, q. v., p. 212) to this day.

In the *Mukhtaṣar al-'Adjā'ib* (*Abrégé des Merveilles*, transl. Carra de Vaux, p. 101), Goliath is classed among the Canaanites, the descendants of Kana'ān, son of Ham, and the verse (v. 25) in the Ḳor'ān: "In this land there is a people of giants", is referred to them. According to Ṭabarī's *Chronicle* (Persian synopsis, transl. Zotenberg) Goliath was a descendant of the 'Ādites and the Thamūdites; he was 500 *mann* high and reigned over the Israelites for a period before Samuel, and oppressed them; this appears to correspond to the period preceding Gideon, during which the Jews were oppressed by the Midianites (*Judges*, Ch. vi.); Djālūt afterwards slew the sons of Eli and carried off the ark; here he is the personification of the Philistines (*I Samuel*, iv.); the account, which follows, of Saul's campaign against the Philistines, the challenging of the Israelites by Goliath, David's selection as their champion and the fight, is substantially the same as that in the Bible (*I Samuel*, xvii). (B. CARRA DE VAUX.)

DJAM' (A.) a technical term in grammar = plural.

DJAMĀ'A (A.; literally, "union, unity") "the whole body of Muslims, in opposition to the heretics, who are separated from the community as seceders" (Juynboll, *Handbuch des Islāmischen Gesetzes*, p. 46, note 1). It is not to be confused with *idjmā'*, the consensus of Muslim scholars of a particular period. (A. SCHAADE.)

DJAMĀL AL-ḤUSAINĪ, a complimentary title of the Persian historian 'AṬĀ ALLĀH B. FAḌL ALLĀH AL-SHĪRĀZĪ, died 917 (1511), or according to others 926 (1520). Between 888—900 (1484—1495) he wrote a history of Muḥammad, his family and companions, which he dedicated to Mīr 'Alī Shīr, entitled *Rawḍat al-Aḥbāb fī siyar al-Nabī wa 'l-Āl wa 'l-Aṣḥāb* (manuscripts in London, Berlin, Vienna, Paris etc.; a Turkish translation was printed in Constantinople). He is also the author of a compendium, *Takmīl al-Ṣinā'a fī 'l-Kawāfī*, on which cf. Ḥādjdjī Khalfa.

Bibliography: The Catalogues of manuscripts by Rieu, Morley, Pertsch, Flügel, Blochet; Ethé in the *Grundriss der Iranischen Philologie*, ii. 358.

DJAMĀL AL-DĪN, a title of honour borne by the Barīd Muḥammad [See Lane-Poole, *Moh. Dynasties*, p. 161] etc. Cf. also AL-DJAWĀD AL-IṢFAHĀNĪ [q. v.].

DJAMĀL AL-DĪN AL-AFGHĀNĪ, AL-SAIYID MUḤAMMAD B. ṢAFDAR, one of the most remarkable figures in the Muslim world in the xix^th century. He was — in the opinion of E. G. Browne — at once philosopher, author, orator and journalist, but above all he was a politician regarded by his opponents as a dangerous agitator. He exercised great influence on the liberationist and constitutional movements, which have arisen in Muḥammadan countries in the last few decades. He agitated for their liberation from European influence and exploitation, for their independent internal development by the introduction of liberal institutions, for the union of all the Islāmic states (including Shī'a Persia) under a single caliphate and the creation of a powerful Muslim Empire capable of resisting European intervention.

Djamāl al-Dīn was one of the most convinced champions of the pan-Islāmic idea with tongue and pen. His family traced its descent through the famous Traditionist 'Alī al-Tirmidhī from Husain b. 'Alī, which entitled them to bear the title Saiyid. According to his own account, he was born at As'adābād near Kanar in the district of Kābul in Afghānistān in 1254 = 1838-1839 in a family following the Ḥanafī law; but others say it was at Asadābād near Hamadān in Persia that he first saw the light. Djamāl al-Dīn, according to them, wished to escape Persian despotism by claiming to be an Afghān subject. In any case Afghānistān was the scene in which his earliest childhood and youth were spent. In Kābul he studied all the higher branches of Muḥammadan learning till his xviii^th year, at the same time devoting attention to the study of philosophy and exact sciences in the traditional fashion of the Muslim East. He next spent over a year in India, made the pilgrimage to Mecca (1273 = 1857) and, on his return from the Ḥadjdj to Afghānistān, entered the service of the Amīr Dōst Muḥammad Khān whom he accompanied on his campaign against Herāt. After the death of the Amīr, by his adherence to Muḥammad A'ẓam, brother of the Amīr Shīr 'Alī who had succeeded to the throne, he became involved in the dynastic civil wars and after the fall of his patron, whom he had served as minister during his brief rule, resolved to leave Afghānistān. Under a pretext of again undertaking the pilgrimage (1285 = 1869),

after a brief stay in India and Cairo, where during a fortnight's stay he came in contact with the Azhar circles and held private lectures in his dwelling, he reached Constantinople (1287 = 1840). As a great reputation had preceded him, a very hearty welcome awaited him at the hands of the leaders of society in the Turkish capital. He was soon appointed to the council of education and invited to deliver public lectures in the Aya Sofia and the Aḥmadiya Mosque. A lecture for students delivered by him in the *Dār al-Funūn* before a distinguished audience, on the value of the arts, in which he mentioned the gift of prophecy among the various social activities, gave Ḥasan Fahmī, the Shaikh al-Islām, who was jealous of his growing influence, an opportunity to charge him with revolutionary views; he had classed prophecy among the arts. On account of the intrigues of his opponents against him he had therefore to make up his mind to leave Constantinople and go to Cairo, where he was very kindly received by the authorities and educated classes. The government granted him an annual allowance of 12,000 Egyptian piastres without binding him to any definite official duties. He was free to instruct the young men eager for knowledge who gathered round him at his house and in unrestricted intercourse in the higher branches of philosophy and theology and at the same time pointed out to them the way to literary activity. In politics also he influenced those around him in the direction of a nationalist revival and liberal constitutional institutions; his activity was not without influence on the nationalist movement which came to a head in 1882 and led to the bombardment of Alexandria, the battle of Tell el-Kebīr and the English occupation. Shortly before this, in 1879, the inflammatory agitator, whose political activities were as inconvenient to the English representative as his regeneration of philosophical studies had been irritating to conservative circles at the Azhar, was at the instigation of the former deported and detained in India (Ḥaidarābād, and later Calcutta) until, after the suppression of Arabī's rising, he was allowed to leave India. During his stay in Ḥaidarābād he composed his refutation of materialism (cf. the article DAHRIYA p. 894). From a memorandum by W. S. Blunt who was interested in Egyptian politics (in Browne, p. 401) we learn what is not mentioned by other biographers, that Djamāl al-Dīn went from India to America, where he spent some months in order to obtain naturalisation as an American citizen without however carrying out this intention. In 1883 we find him for a brief period in London, soon afterwards along with his friend and devoted pupil, afterwards the Egyptian Muftī Muḥammad ʿAbduh, in Paris where he devoted his literary activities to giving vent to his disapproval of English intervention in the affairs of Muhammadan peoples. The most prominent and influential newspapers opened their columns to his essays, to which much attention was paid by competent authorities, on the Oriental policy of Russia and England, conditions in Turkey and Egypt, and the meaning of the Mahdī movement which had meanwhile arisen in the Sūdān. To this period also belongs his polemic with Ernest Renan, arising out of the latter's Sorbonne lecture on "Islām and Science" in which he stated that Islām did not favour scientific activity; Djamāl al-Dīn sought to refute this in an article which first appeared in the *Journal des Débats*, (also in German, see *Bibl.*). It may be mentioned in passing that, soon afterwards, Renan's lecture was translated into Arabic by Ḥasan Efendi ʿĀṣim and lithographed in Cairo (n. d.) along with a refutation (*radd*). The greater part of Djamāl al-Dīn's literary and political activities in Paris were however devoted to an Arabic newspaper published at the expense of a number of Indian Muhammadans in conjunction with Muḥammad ʿAbduh, (as actual editor), entitled *al-ʿUrwat al-Wuthḳā* ("Le Lien Indissoluble") which unsparingly criticised English policy in Muhammadan countries (particularly India and Egypt); the newspaper, the first number of which appeared on the 15th Djumādā I. 1301 (13th March 1884) was suppressed by the English authorities in the East; its introduction to Egypt and India prevented, and it was only possible by sending it under covered post for it to reach those whom it was intended to influence (information supplied by Djamāl al-Dīn himself). Although as a result of these obstacles it was destined to but a brief existence (Djamāl al-Dīn and Muhammad ʿAbduh brought out 18 numbers in 8 months, the last appearing on the 26th Dhu 'l-Ḥidjdja 1301 = 17th October 1884), it exercised great influence on the awakening of liberationist anti-English views in Muslim circles and may be considered the first literary harbinger of the nationalist movements in the Muhammadan territories of England, which were gradually strengthened by it. That its authority is not lessened at the present day, may be concluded from the fact that quite recently (1328 = 1910) after the lapse of a quarter of a century a new edition of the *ʿUrwa* has been prepared by Husain Muḥyī al-Dīn al-Ḥabbāl, editor of the *Abābīl* newspaper (printed by Nasīb Efendi Ṣabra). — In spite of his frankly acknowledged Anglophobe agitation, through the intervention of W. S. Blunt, the leading statesmen of England entered into personal relations with Djamāl al-Dīn with the object of putting down the Mahdī movement in the Sūdān but no practical result was attained. Soon afterwards (1886) Djamāl al-Dīn, whose agitation for the awakening of Islamic peoples was penetrating far and wide, received a telegraphic invitation to the court of Shāh Nāṣir al-Dīn in Ṭehrān, where he had a most distinguished reception and was shown great honour and granted high political offices. But this did not last long as the Shāh, soon becoming suspicious, became tired of the increasing influence and growing popularity of his guest and Djamāl al-Dīn had to leave Persia under pretext of considerations of health. From there he went to Russia where he again entered into important political negotiations and remained till on the occasion of his visit to the Paris Exhibition of 1889 he met the Shāh, who was then in Europe, at Munich and was induced by him to accompany him to Persia. During his second stay in Persia he experienced the fickleness of the Oriental ruler's favour in a still more marked fashion. At first he enjoyed the Shāh's full favour and confidence, but the intrigues of the Grand Vizier Mīrzā ʿAlī Asghar Khān, Amīn al-Sulṭān, who had a grudge against Djamāl al-Dīn and felt he had a rival in the learned and popular

stranger, succeeded in arousing the Shāh's mistrust, to which the reform in the administration of justice proposed by Djamāl al-Dīn largely contributed. Recognising the danger of his position, he now retired to the sanctuary of Shāh 'Abd al-ʿAẓīm near Ṭehrān which was considered an inviolable asylum where he remained for seven months, surrounded by a body of admirers listening to his views on the reform of the down-trodden country, until the Shāh incited by the Grand Vizier, disregarding the undisputed inviolability of the sanctuary had him seized (about the beginning of 1891) by 500 armed cavalry and in spite of his invalid state carried in chains in the middle of winter to the town of Khāniḳīn on the Turco-Persian frontier. From here, after a brief stay in Baṣra, he went to England again, where he conducted a great agitation in lectures and articles against the reign of terror in Persia. Djamāl al-Dīn's cruel expulsion from Persia was a signal in the country itself for a rally of the reform party and its open activity, which was continually encouraged by Djamāl al-Dīn himself in letters, which he sent to influential individuals after his deportation. A special incitement to action was given by the Tobacco Concession granted in March 1890 by the Persian government to an English financial group, whereby the state renounced an important source of revenue in favour of foreign speculators. This gave Djamāl al-Dīn an opportunity to write an impassioned letter from Baṣra to Mīrzā Ḥasan-i Shīrāzī the first Mudjtahid of Samarra, in which he called attention to the squandering of the properties of the state on the "enemies of Islām", as the economic supremacy of the Europeans had already been brought about by important concessions and now the tobacco monopoly in Persia was further to be handed over to them. He also referred to the misrule and cruelty of the government, particularly of 'Alī Aṣghar Khān, in order, by repeatedly emphasising religious motives to arouse this high ecclesiastical dignitary and his colleagues to active intervention in the name of religion (this letter may be found in Arabic in *Manār*, x. 820 *et seq.*, and in English in Browne, *op. cit.* p. 15—21). The immediate result of this step was a *fatwā* from the Mudjtahid, forbidding the enjoyment of tobacco to every believer, as long as the government did not annul the concession agreement. It was thus forced to do this on paying a substantial indemnity to the concessionaires, as a result of the resistance of the people. The reform movement which soon afterwards assumed great dimensions and was supported by religious circles in Persia, is also connected with Djamāl al-Dīn's agitation, another result of which was the murder of the Shāh by Mīrzā Muḥammad Riḍā, a disciple of Djamāl al-Dīn (11th March 1899). During his brief stay in London (1892), during which he was most active politically, he received through the Turkish ambassador Rustam Pasha in London, 'Abd al-Ḥamīd's written invitation to settle permanently in Constantinople as the Sulṭān's guest. He accepted the Sulṭān's offer not without reluctance. Besides a monthly allowance of £ 75 Turkish, a beautiful house on the Nishāntāsh hill near the Imperial Yildiz palace was allotted him, where he was able to live in princely comfort and meet people who sought his inspiring conversation. Here he spent the last five years of his life "tossed between the proofs of 'Abd al-Ḥamīd's favour and the innumerable hostile machinations which have been set in operation against him from the Sulṭān's entourage and although he has repeatedly sought permission to depart, he is always refused and lives in the beautiful house allotted him as in a kind of gilded cage".

Thus a German visitor describes his position in Nishāntāsh in June 1896. The kind of intrigues indulged in by his enemies may be judged from Djamāl al-Dīn's statement to another German interviewer. "The young Khedive 'Abbās Pasha had come to Constantinople for the first time. He wished to make my acquaintance. They sought to prevent this. I do not know who told the Khedive that I was then in the habit of going every afternoon to the Sweet Waters. The Khedive came there as if by accident, came up to me and introduced himself. We spoke for a quarter of an hour. This was told the Sulṭān, the accidental meeting represented as pre-arranged and it was added that I had declared in the conversation that the Khedive was the true *khalīfa*. However the Sulṭān was not then to be influenced by intrigue". His situation became more and more unpleasant, particularly after the murder of the Shāh, as his enemies in Persia charged him openly with conducting the conspiracy against the Shāh from Stambul and instigating the murderer, one of his devoted followers, to the deed. Although the Sulṭān would not consent to his extradition, the insinuations of his enemies became more and more effective. Amongst his most dangerous opponents was the notorious Abu 'l-Hudā, the most influential ecclesiastic at the Sulṭān's court, who had the sovereign's ear. When Djamāl al-Dīn died on the 9th March 1897 of a cancer, which began in his chin and gradually spread, it was freely suspected that his mortal illness was due to poisoning at the instigation of Abu 'l-Hudā. Djamāl al-Dīn found his last resting place in the cemetery at Nishāntāsh.

In spite of his scholarly command of Muslim theology and philosophy, Djamāl al-Dīn wrote very little in these fields. His tractate against materialistic philosophy (see DAHRIYA, p. 895), which appeared in three languages may be mentioned; he also wrote a short sketch of Afghān history entitled *Tatimmat al-Bayān* (lith. Cairo, n. d. 45 pp.) and the article on the Bābīs in Beirut al-Bustānī's *Dāʾirat al-Maʿārif*. His activities were mainly devoted to publishing inflammatory political articles. In addition to *al-ʿUrwat al-Wuthḳā* he was (1892) joint-founder and an industrious contributor to the bilingual (Arabic and English) monthly *Ḍiyā al-Khāfiḳain* ("Splendour of the Two Hemispheres") in which under the name "al-Saiyid" or "al-Saiyid al-Ḥusainī" he directed the fiercest attacks on the Shāh, whose deposition he always urged, his ministers and their abuse of their powers.

Bibliography: E. G. Browne, *The Persian Revolution of 1905—1909* (Cambridge, 1910) contains a detailed and authoritative biography and appreciation of Djamāl al-Dīn with full references and a portrait (frontispiece); a biography is also incorporated in the first volume of Muḥammad Rashīd Riḍā's monograph on Muḥammad 'Abduh (*Taʾrīkh al-Ustādh al-Imām*, Cairo 1325 = 1907); Vollers, in *Zeitschr. d. D. Morgenl. Ges.*, xliii. 108; L. Massignon in the *Revue du Monde Musulman* xii. (1910), p. 561

et seq.; Ernest Renan, *L'Islamisme et La Science*, a lecture delivered in the Sorbonne on the 29th March 1883. A criticism of this lecture "by the Afghan *Scheik Djemmal* (!) *Eddin*" and Ernest Renan's *Reply* (Basel, Bernheim, 1883). Two lectures by Djamāl al-Dīn (on education and craftmanship) are given in the Arabic periodical *Miṣr* (Alexandria, 1296 5th Djumādā I); two essays on absolute governments (*fi 'l-Ḥukūmāt al-istibdādiya*) in *Manār*, Vol. iii. Much material for his biography is also contained in the accounts in periodicals of meetings and conversations with Djamāl al-Dīn; of descriptions of him in German we may particularly mention the articles in the *Berliner Tageblatt* of the 23rd June 1896 (evening edition) and in the *Beilage zur Allgemeinen Zeitung* (Munich, 24th June 1896) from which some of the above quotations are taken. (I. GOLDZIHER.)

DJAMĀLĪ, 'ALĀ' AL-DĪN 'ALĪ B. AḤMAD, a native of Caramania, a famous Muftī and Shaikh al-Islām in the reign of Bāyazīd II, Selīm I. and Sulaimān I. 909—932 (1503—1525). He studied in Constantinople and Brusa and was then appointed Mudarris at the 'Alībeg Madrasa at Edirne. But when his salary was reduced by Muḥammad II, he resigned his office and did not take another till the reign of Bāyazīd when he became Mudarris in various towns of Asia Minor, Amasia, Brusa, Iznik. In 907 (1501) he set out on the pilgrimage to Mecca, but on account of the troubles then rife in the holy city had to content himself with a year's stay in Egypt. On his return he was appointed to the Madrasa recently erected by Bāyazīd and appointed Shaikh al-Islām. As such he delivered the *fatwā*, which was to justify Selim I's declaration of war against Egypt. As it was his custom to hang out of the window a basket into which people, who wanted a *fatwā* from him, could put their query, he was humorously called *Zenbīlli* (Basket-Muftī). A selection of his *fatwās* exists in a manuscript in Cairo. Djamālī died in 932 (1525).

DJAMBI, a state in Sumatra [q. v.].

DJAMDĀR, (a contraction of *djāmah-dār*, keeper of the wardrobe, see Dozy, *Supplément*, wrongly written *djam'adār* in Vuller's lexicon), denoted a body of Mamlūks of the Sulṭān's guard, who were perhaps employed in personal service at the court. They were divided into seven troops (*nūba*) (see Khalīl al-Ẓāhirī, *Zubda*, ed. Ravaisse, p. 116). Djamdār is also the title of one of the higher ranks in the army in Hindustān, Balūčistān and Masḳaṭ.

DJĀMĪ, MAWLĀNĀ NŪR AL-DĪN 'ABD AL-RAḤMĀN, a Persian poet, usually described as the last of the classic poets of Persia, was born at Khardjird in the district of Djām in the province of Herāt on the 23rd Sha'bān 817 (7th November 1414) and died at Herāt on the 18th Muḥarram 898 (9th November 1492). His family belonged to Dasht, a district in the province of Iṣpahān; his father Niẓām al-Dīn Aḥmad b. Shams al-Dīn Muḥammad had moved from this neighbourhood to that of Herāt. On this account the poet, before he adopted the *takhalluṣ* Djāmī, used for a period in his works that of Dashtī. In the course of his studies, he was seized with an incontrollable passion for mysticism and chose as his spiritual guide, Sa'd al-Dīn Muḥammad al-Kashgharī, pupil and successor of the great saint Bahā al-Dīn Naḳshband. Towards the end of his life he went quite mad and became dumb (Dawlat-Shāh, p. 485, l. 13 *et seq.*).

The volume of his work is considerable and varied. He took up a theme of the court epic, already powerfully handled by Firdawsī, *Yūsuf u Zulaikhā* (ed. with German transl., by Rosenzweig, Vienna 1824; English translations by Griffith, London 1881, and Rogers 1889; numerous Oriental editions); it is a product of his old age (he was seventy when he wrote it) and was dedicated to Sulṭān Ḥusain Mīrzā, ruler of Khorāsān. This poem has been included with six others (*Silsilat al-Dhahab*, *Salāmān u Absāl*, *Tuḥfat al-Aḥrār*, *Subḥat al-Abrār*, *Laila u Madjnūn*, *Khirad-nāma-i Sikandarī*), in the collection known as the *Haft-Awrang* (more correctly *haftūrang*) "The Seven Stars of the Great Bear"; when these poems, exclusive of the first two, are published together, the collection thus formed is called the *Pandj-gandj* "the Five Treasures". In the field of lyric poetry, he left three *Dīwāns*: *Fātiḥat al-Shabāb* "Beginning of Youth" (884 = 1479), *Wāsiṭat al-'Iḳd* "Central part of the Chain" (894 = 1489) and *Khātimat al-Ḥayāt* "Close of Life" (896 = 1491), which from the dates, he seems to have published at an advanced age. Finally he wrote in prose the *Bahāristān*, an imitation of Sa'dī's *Gulistān* and the *Nafaḥāt al-Uns* "Zephyrs of Intimacy" biographies of Ṣūfīs, (883 = 1478). His *Kulliyāt*, or complete works, were lithographed in Lucknow 1876.

Philologie*, ii. 231—233, 305—307; Silv. de Sacy, *Notices et Extraits*, xii. 287 *et seq.*; V. von Rosenzweig, *Biographische Notizen* (Vienna, 1840); V. Rosen, *Catalogue des Mss. persans* (*Institut des Langues Orientales*) (St. Petersburg, 1886), p. 215—261. (CL. HUART.)

AL-**DJĀMI'** (A.) the "Collector", the "Combiner" one of the names of God in the sense suggested in Sūra iii. 7 and iv. 139. — *Al-Djāmi'* properly *al-Masdjid al-Djāmi'*, the chief mosque of a town in which the Friday service is held. Cf. the article AL-MASDJID.

DJĀMID (A.). A technical term in Arabic grammar. *Djāmid*, literally "congealed" thence "inorganic" is applied to nouns as well as verbs. By an *ism djāmid* we understand a noun, which "is neither derived (*mushtaḳḳ*) from an abstract verbal noun (*maṣdar*) nor is actually one", i. e. "a concrete verbal substantive" (Fleischer, *Kleinere Schriften*, i. 167, iii. 540 *et seq.*). Examples: *radjul*, a man, *baṭṭa*, a duck (Wright, *Arabic Grammar*, 3rd ed., i. 106). Arab grammarians are not all agreed as to the position of the infinitive (*maṣdar*) in this respect; cf. Fleischer, *op. cit.*, i. 167 and Muḥammad A'lā, *Dictionary of Technical Terms*, i. 196. — *Fi'l djāmid* is a verb which is only found in the perfect, like *laisa*, *'asā*, etc. (A. SCHAADE.)

DJAMĪL b. ʿAbd Allāh b. Maʿmar, with the *kunya* Abū ʿAmr, a famous Arab poet, who lived in the first century of the Hidjra. We know very little about his life. This is partly due to the fact that he had no permanent abode but led a wandering life along with his tribe the Banū ʿUdhra which had a reputation for depth of feeling. His love affair with Bathna or Buthaina, a member of his tribe, who — for a period at least — lived in Wādi ʾl-Ḳurā, is famous. He wooed her as a young man but was rejected by her father. Nevertheless he still kept up secret relations with Bathna, even after she had married a certain Nubaih. Bathna's male relatives, the Banu ʾl-Aḥabb, then incited the prefect of Wādi ʾl-Ḳurā (according to another version of al-Madīna) against him, and Djamil had to flee. After many wanderings he is said to have died in Egypt in 82 (701) whither he had gone after the manner of the poets of the day, to write panegyrics on the governor of the province, ʿAbd al-ʿAzīz b. Marwān. Bathna survived him.

Djamil is further distinguished as a panegyrist. A poem by him in honour of the tribe of Djudhām to which his mother belonged is said, for example, to have earned him a rich reward. On the other hand his lampoons were much dreaded. His long feud with the Banu ʾl-Aḥabb is particularly celebrated. But it is pre-eminently as a writer of love-poems (*nasīb*) that he lives in the memory of posterity and Djamil's verses (all to Bathna) are really among the most beautiful and tender that have survived to us from the older period of Arabic poetry, when it was still uninfluenced by the Persians. He is perhaps surpassed only by ʿOmar b. Abī Rabīʿa among his contemporaries. It is quite credible that Arab authors are right when they insist, in discussing Djamil, that his verses and protestations of love were the expression of his personal feelings. They are remarkable for their simple unaffected language and this is probably — next to their aesthetic value — the reason why they have been set to music and sung by so many Arab singers.

We may further mention that Djamil, in addition to writing himself, also handed down the poems of Hudba b. Khashram; his own reciter (*rāwī*) was the poet Kuthaiyir [q. v.].

Bibliography: *Aghānī* (1st ed.), i. 58; vii. 77—110; viii. 40; xix. 112; Ibn Ḳotaiba, *Kitāb al-Shiʿr* (ed. de Goeje), p. 260—268; Ibn Khallikān (ed. Wüstenf.), No. 141 (transl. by de Slane, i. 331—337); Brockelmann, *Gesch. d. arab. Litter.*, i. 48; specimens of his poetry are also given in Nöldeke, *Delectus*, p. 9—13, 34. (A. Schaade.)

DJAMĪLA, a celebrated Arab singer, who lived in the time of the early Umaiyads. She was a client of the Banu Sulaim, married a client of the Banu ʾl-Ḥārith b. al-Khazradj and lived with him in al-Sunḥ near Madīna. She is said to have learned music and singing in her youth from the singer Sāʾib Khāthir, by listening to him without his knowledge. It is of chronological importance to point out that this Sāʾib Khāthir, another of whose pupils was the famous singer ʿAzza al-Mailā' [q. v., p. 542] met his death in the battle on the Ḥarra in the year 63 (682—683) (*Aghānī*, vii. 188). Numerous singers, both men and women were trained in Djamīla's school — she was a most celebrated teacher. The best known are: Maʿbad, Ibn ʿĀʾisha, Ḥabbāba, Salāma etc. She is said to have been a friend of Bathna, the beloved of Djamil [q. v.]. Many celebrated poets such as ʿOmar b. Abī Rabīʿa, al-Aḥwaṣ etc., were also on intimate terms with her. A pilgrimage to Mecca, which she undertook, if we are to believe a very unreliable story, was of the nature of a triumphal procession.

Bibliography: *Aghānī* (first ed.) vii. 124—148; *Aghānī* (ed. Kosegarten), p. 16 *et seq.* of the introduction. (Schaade.)

al-**DJAMRA**, originally a pebble, is particularly used of the heaps of stones in the valley of Minā which have been formed by the stones thrown by the pilgrims returning from the festival at ʿArafat. There are three heaps which are a bowshot from one another: *al-djamra al-ūlā* (or *al-dunyā*) to the east near the Mosque of al-Khaif, *al-djamra al-wusṭā* in the centre and *djamrat-(dhāt-)al-ʿAḳaba* at the western exit of the valley. The first two are bounded by thick stone pillars and the third by a wall. *Al-Muḥaṣṣab* is also used for al-Djamra but it is also the name of a plain between Mecca and Minā. On the third or western heap pilgrims throw seven stones immediately before the sacrifice on the 10th Dhu ʾl-Ḥidjdja; after visiting Mecca they again return to Minā and on each of the three Tashrīḳ days at sunset throw seven stones on each of the three heaps. As each stone is thrown, they say: "in the name of God; God is great"! The pilgrims ought to provide themselves with stones beforehand but, according to Burckhardt's account, they do not trouble to do this and take the stones thrown by others. Among the erotic poets of the Umaiyad period, the ceremony of stone-throwing was a favourite *motif*, as women when performing it, lifted their veils a little (e. g. *Kitāb al-Aghānī*, vi. 30; Yāḳūt, ii. 427; Mubarrad, *Kāmil*, ed. Wright, 166, 15, cf. 370, 2 *et seq.*).

This peculiar custom, which is not directly prescribed in the Ḳorʾān, but is mentioned in the biographies of Muḥammad and in the Ḥadīth (e. g. Ibn Hishām, 970; Wāḳidī, Wellhausen, p. 417, 428 *et seq.*; Ibn Saʿd, ii, 1, p. 125, viii, 224 *et seq.*) was taken over by Islām from paganism. In heathen times, there were, according to Ibn Hishām, 534, 13 (where one should read *maghrā* with Wellhausen), blood-stained sacrificial stones near the heaps of stones; cf. also the stones which were worshipped at al-Muḥaṣṣab in a poem by al-Farazdaḳ (ed. Boucher, 30). As to the meaning of the ceremony Burckhardt's observation, that the Muslims wish thereby to protect themselves from the Devil, is certainly correct in so far as the stone-throwing was originally here as elsewhere a cursing ceremony.

But what was to become accursed thereby is not clear. Van Vloten suggested the Shaiṭān of the place, thinking of the story in Ibn Hishām, 300, 6. Houtsma on the other hand, following his view that the Ḥadjdj is originally an autumn festival, sees in the being who is cursed and banished the sun, which was occasionally called al-Shaiṭān by the Arabs (Goldziher, *Abhandlungen z. Arab. Philol.*, i. 113). The question of course can only be settled in connection with a discussion of the whole Ḥadjdj (see this article). The fact that at the principal festival stones are cast only on the ʿAḳaba heap, while it is not till the final celebrations that they are cast on the other two,

suggests that the two latter are of quite secondary importance, for which idea one might also adduce the description of Abū Bakr's pilgrimage in Wāḳidī (Wellhausen, 417). But we must not overlook the fact that not only does the above mentioned verse in Ibn Hishām speak of several other heaps beside the sacrificial stones but Ḥassān b. Thābit in a lament on the Prophet (Ibn Hishām, 1023, 17) calls the 'Aḳaba heap al-Djamra al-Kubrā, which seems to suggest the existence of other heaps.

(Fr. Buhl.)

DJĀN, (Vedic, *dhyāna*), life, soul in the sense of vital principle (*anima*). (Cl. Huart.)

DJANĀB, properly "side", "district", has become a title of honour, "highness, excellency". It is found in a metaphorical sense in Maḳrīzī: *djanāb al-Sharī'a* "the majesty of the divine law" (Sacy, *Christ. Arabe*, Vol. ii., p. 64 of the text ar., l. 11). (Cl. Huart.)

DJANĀBA is the so-called "major" ritual impurity. One who is in this unclean state is called *djunub* and can only become "clean" again by a so-called major ritual ablution (*ghusl*). On the other hand the law only prescribes for a Muslim in a state of so-called "minor" impurity a *wuḍū'* (minor ritual ablution). The distinction is based on the different beginnings of verses 8 and 9 of Sūra V. of the Ḳor'ān. Djanāba is the unclean condition described in the ninth verse: "When ye have had marital intercourse with your wives, purify yourselves". The law further prescribes that any effusio seminis shall be considered the same as marital intercourse.

The *djunub* cannot legally perform a valid *ṣalāt*. Neither can he make a *ṭawāf* round the Ka'ba nor stay in a mosque — except in cases of necessity. The *djunub* is further forbidden to touch copies of the Ḳor'ān or quote verses from it during his unclean condition.

Djanāba is also called "the major *ḥadath*" in opposition to minor ritual impurity.

al-**DJANĀḤIYA**, the followers of 'Abd Allāh b. Mu'āwiya [q. v., p. 26] are so called after the founder of the family, Dja'far b. Abī Ṭālib [q. v.], to whom Muḥammad had given the name Dhu 'l-Djanāḥain, when he had fallen in the battle of Mu'ta. This also explains the name al-Ṭaiyāriya (*al-Ṭaiyār fi 'l-Djanna*) in *Mafātīḥ al-'Ulūm*, ed. van Vloten, p. 31. His son 'Abd Allāh [q. v., p. 26] is frequently celebrated in story for his generosity and the grandson Mu'āwiya also was held in high esteem in Shī'ite circles — cf. the poet al-Kuthaiyir's statement in *Aghānī*, viii. 34. This explains the success of his son 'Abd Allāh when he appeared as Imām and shows that the Djanāḥiya formed a separate section of the Shī'ites, who were attached to the family of Dja'far b. Abī Ṭālib in the early days of Islām. As regards dogma, they are distinguished by the doctrines of incarnation, metempsychosis and allegorical exposition of the Ḳor'ān just as these were adopted in other Shī'a circles also.

Bibliography: Al-Baghdādī, *al-Farḳ baina 'l-Firaḳ*, ed. Muh. Badr, 235 *et seq.*; Friedländer in *Journal of the Amer. Orient. Society*, xxix. 44 *et seq.*, where further references are given. Ibn Nubāta (Commentary on Ibn Zaidūn) has an article on 'Abd Allāh.

DJĀNBALĀṬ al-Nāṣirī, Sulṭān of Egypt under the name al-Malik al-Ashraf Abu 'l-Naṣr, was one of the Grand Dawādār Yeshbek's Mamlūks; he is therefore also known as Djānbalāṭ min Yeshbek. [The placing of *min* between two proper names always denotes the relation of Mamlūk (the first proper name) to owner (the second proper name) and is identical with the personal *nisba*; thus, for example, Ibn Iyās calls the Amīr Djaḳam indifferently Djaḳam al-'Iwaḍī and Djaḳam min 'Iwaḍ. The copyists of the manuscripts no longer fully understood this meaning and thus a mistake has arisen in all the European works which deal with the Mamlūk period. *Ibn* was written for *min*. A Mamlūk, for example, who is called *ibn 'Abdallāh* i. e. of unknown parentage, cannot of course at the same time be called the son of Yeshbek; the manuscripts, which have been preserved from the Mamlūk period itself have always correctly *min* cf. my *Inscriptions de Tripolis*, p. 64 in *Mémoires de l'Institut français d'archéologie orientale du Caire*, xxv. fasc. i.]. Yeshbek sold him to Sulṭān Ḳāītbey, who enrolled him in his guard. He became Dawādār [q. v., p. 931], accompanied the pilgrims' caravan to Mecca on several occasions, was afterwards sent as ambassador to Bāyazīd's court and ultimately received the important office of Purchaser of Mamlūks (*Tādjir al-mamālīk*). Ḳāītbey's son, al-Malik al-Nāṣir Muḥammad, appointed him Grand Dawādār in 902 (1407). In the following year he became governor of Aleppo and then of Damascus. In the year 904 (1499) he was appointed Atābeg by Sulṭān Ḳānṣauh I and in July of the same year chosen Sulṭān by the army, when Ḳānṣauh had fled as a result of the risings. Sulṭān Djānbalāṭ was not recognised by Ḳaṣrauh, the powerful governor of Damascus and the high officials in Cairo rebelled against him. When the Mamlūks also no longer stood by him, he was seized by his opponents by Djumādā II 906 (January 1501), brought to Alexandria and put to death in prison there. His reign had only lasted six months.

DJĀMBULĀṬ or DJUMBLĀṬ, a famous Druze family, according to von Oppenheim of Kurdish (or Turkish) origin. At the beginning of the xviith century we find them as independent chiefs in the district of Kilīz near Aleppo. Quarrels with the Pasha of this town caused them to move to southern Syria where they settled in 1630 at the invitation of the celebrated Druze prince Fakhr al-Dīn [q. v.] in Lebanon. Their Shaikh at this time was one of the councillors and generals of this prince and his descendants inherited this influential position. One of them Alī Djumblāṭ attained great prosperity by his marriage with the daughter of the very wealthy and influential spiritual leader of the Druzes, Kaplan al-Kāḍī al-Tanūkhī and built the castle of al-Mukhtāra in Bazrān which is still the centre of the Djumblāṭ family. The later history of the Druzes centres round the continual struggles between the Djumblāṭ and the Shihābids, who again were supported by the Yezbekis.

Bibliography: v. Oppenheim, *Vom Mittelmeer zum Persischen Golf*, i. 150 *et seq*.

DJĀNDĀR (also DJANDĀR) (P.) composed of *djān* weapon and *dār* "holding", bodyguard; plural *Djāndāriya* or *Djanādira*. (Cf. Dozy, *Supplement*, s. v.). The *Nōbat al-Djāndāriya* was in the Mamlūk and Marīnid kingdoms the bodyguard of the Sulṭān in his palace and on his journeys; it was their duty to conduct Amīrs to the Sulṭān at audiences or paying of homage, and with the dawādārs and private secretary they took the mails from the couriers; they had to carry out sentences of imprisonment, torture and death by special command of the Sulṭān. The chief of the bodyguard, the Amīr Djāndār, had charge of the prison in which political prisoners were examined; they remained there only a few days as their trial ended either in freedom or death. The Djāndārs were divided into companies (*nōba*), each being commanded by a chief (*ra'ī nōba*) who had the rank of an Amīr of five Mamlūks (lieutenant). Their colonel (also called *ra'ī nōbat al-nawwāb al-djāndāriya*) was chosen from among the Amīrs of 40 Mamlūks, the *ṭablakhāna* (i. e. those who had the right to be accompanied by music) and at a later period from among the Amīrs of 20. Below him were 4 or 5, according to others, 10 chiefs of companies, then the keepers of the palace gates (*barddāriya*) and the cavalry bodyguard of Beduins (*al-ṭawā'if al-rikābiya*).

DJANDJĪRA, native state on the W. coast of India, about 50 m. S. of Bombay; area, 324 sq. m.; pop. (1901), 85,414, of whom 17% are Musalmans; revenue, about £ 40,000. It takes its name from a rocky island (Ar. *djazīra*), which was occupied towards the end of the xvth cent. by Yāḳūt, an Abyssinian in the service of Aḥmad Shāh, the Niẓām Shāhī king of Aḥmadnagar. His descendants have since been known as Sīdīs (from Saiyid), and their territory sometimes as Ḥabshān. In the time of Awrangzīb they became the admirals of the Mughal empire. It is their boast that they were never conquered by the Marāṭhās; and they did not enter into relations with the British Government until 1870. In the latter half of the xviith cent., their fleet often wintered in Bombay harbour, as either friends or enemies. Later, one of the family established himself in the castle of Sūrat, whence he was expelled by the British in 1759. From Sūrat was occupied Djaʿfarābād, a port on the opposite coast of Kāthiāwār, which still remains part of the possessions of the Nawwāb of Djandjīra.

DJANGAL. A word used in many N. Indian languages in the sense of forest or waste land covered with bushes; adopted in English in the form "jungle". (M. LONGWORTH DAMES.)

DJĀNIK (connected with the name of the Trans. Georgian *Tzan*, Lazes by Macdonald Kinneir, p. 282), the name of a Turkish province in Asia Minor, bounded on the north by the Black Sea, in the south by the province of Siwās, in the west and east by those of Kastamūni and Trebizond; it is now the Sandjaḳ of Samsūn, which is still officially known by its former name also; it is in the wilāyet of Trebizond and contains 6 ḳaḍās, Samsūn, Fatsa, Ūniye, Terme, Čarshembe, Bafra and 3 Nāḥiyas: Karaḳush, Ālā-Čām, and Ḳawaḳ; population about 310,000, the great majority being Muslims. The climate is pleasant, moist on the coast and cold in the mountains; the soil is very fertile, growing tobacco (Samsūn, Bafra) and cereals. The mines are now no longer worked; there are forests (oak, beech, pine and fig-trees) in the highlands. Ḥādjdjī-Khalfa notes that the population of the interior, in his time still very uncivilised, was very scattered and that the villages consisted of isolated quarters (*maḥalla*) each containing three or four houses. This district, which had previously been occupied by Muḥammad I, who had taken it from Ḥasan-Beg, son of Alp-Arslān, was definitely conquered from the Comneni of Trebizond by Muḥammad II (865 = 1461); the historians, however, mention a minor dynasty which reigned over this province: Ḳobād-Oghlu, a vassal of Tīmūr, who attacked Sulṭān Muḥammad I (Saʿd al-Dīn, *Tādj al-Tawārīkh*, i. 196), Tāhir-Oghlu, Djunaid-Beg, Ḥusain-Beg.

Reichs* (index) = *Histoire de l'Empire Ottoman*, ii. 180, 473. (CL. HUART.)

DJANNA, "Garden" is the name most frequently given in the Ḳorʾān and Tradition to Paradise, the abode of the blessed. It is only once referred to in the Ḳorʾān by the Persian name *Firdaws* alone and a second time by the two words together *djannat al-Firdaws*. It is fairly often called *djannāt ʿadn*, the gardens of Eden; cf. the Biblical name *gan ʿēden* (*Genesis*, ii. 15).

Muḥammad's conception of Paradise is well known to be materialistic and voluptuous; it is

expressed in several sūras, which belong to the first period of his preaching: e. g. (xlvii. 16—17): "this is the description of the paradise that has been promised to the pious; rivers whose water never becomes tainted, and rivers of milk whose taste changeth not; and rivers of wine the delight of those that drink of them; and rivers of pure honey, all kinds of fruits and pardon for sins". (lv. 54) The elect "shall repose on couches the coverings of which shall be of brocade . . . there are young virgins with modest looks who have never been deflowered by man nor spirit". (lvi. 15—22): "They shall repose on couches adorned with gold and precious stones, sitting opposite to one another thereon. Youths eternally young shall go round about them to attend them with goblets and beakers and cups of flowing wine, and with fruits which they shall choose to their taste and the flesh of those birds they most desire". (*ibid.* 27—33): "They shall abide among lotus trees without thorns and of mans loaded with fruit from top to bottom, under a shade which casts its shadow far, near a flowing water . . . they shall repose on lofty beds". (*ibid.* 34—35): "We have created the women of paradise, the houris, by a special creation, we have preserved their virginity". — (lv. 72): these houris "are secluded in pavilions".

All these descriptions are quite clearly drawn pictures; they are probably inspired by the art of painting. Muḥammad or his unknown teachers must have seen Christian miniatures or mosaics representing the gardens of Paradise and have interpreted the figures of angels as being those of young men or young women.

In Sūra lv, a sūra which is composed in the very unusual form of a hymn with a refrain, Muḥammad speaks of two gardens given to the elect, each of them filled with shady trees, watered by flowing streams and containing two kinds of fruit. In the same sūra, verses 16—19, he also mentions two easts, two wests and two seas. This dualism, except perhaps the two seas, is not at all easy to explain; it might almost be said that the Prophet used the dual termination because it was more pleasing to the ear.

To sum up then, his paradise is essentially a garden in which there are beautiful women, couches covered with rich brocades, flowing cups and luscious fruits.

At a later period Paradise was represented as a pyramid or cone in eight stories; it was given one storey more than Hell as it was believed the elect would be greater in number than the damned. The different stories are built of materials of increasing value and each has a gate. At the top grows the lote-tree of the boundary, mentioned in *Ḳor'ān*, liii. 14, whose branches shade the whole pyramid. The books in which are written the deeds of men are kept in Paradise along with a prototype of the Ḳor'ān; this is what Muḥammad calls the "perspicuous book" (x. 62), the "guarded tablet" (lxxxv. 22) or the "mother of the Book" (xiii. 39). Beside it is the *Ḳalam* or reed-pen which writes on the tablet; we also find a prototype of the Ka'ba in Paradise, called the "frequented house" and objects which are to be used at the last judgment like the balance for weighing the deeds of men, seats for the prophets, and standards. The standard of the prophet Muḥammad, or rather its heavenly prototype, is planted on a mountain called the mountain of glory which rises on the flank of the pyramid of Paradise.

Paradise with all its contents is placed above the astronomical heavens in which the planets revolve and rests on a number of "seas" having abstract names like "the sea of divided substance, the sea of grace, the sea of the Lord". Above the pyramid lie the worlds of dominion (*malakūt*) and power (*djabarūt*), the Throne and the Tabernacle of God.

Orthodox Muslim theology, whose chief representatives are Ghazālī and Ash'arī, has admitted sensual pleasures into Paradise, though pointing out that they will only begin after the Resurrection. The pleasures of imagination and of intelligence are also admitted. According to al-Ghazālī, an object of delight imagined by the elect will be realised at once although not quite in an objective manner, at least as regards sight and the other senses so that the blessed shall live in a perpetual hallucination. Paradise will be like a great market in which images will be bought. The pleasures of intelligence shall accompany those of the senses, they shall consist in the joy of knowledge, of possession of dominion, and in the contemplation of the glory of the righteous. But the greatest happiness of the elect will be the sight of God.

The beatific vision or sight of God is allowed by orthodox Muslim theology: Ghazālī says that God will be seen without being and without form. This belief does not seem to be in harmony with the Ḳor'ān; for in the Ḳor'ān God is almost always veiled. He calls upon Adam but does not reveal himself; Noah does not see him; Abraham "his friend" only sees his angels; Moses asks to see God upon the mountain; hardly has he seen him than he falls into a swoon and on coming to himself is filled with repentance. Muḥammad himself does not see him; he only sees Gabriel; in the vision referred to in Ḳor'ān liii. 16, he does not even see the lote-tree of the boundary; "the lote", he says, "was all veiled". According to a tradition given in the *Mukhtaṣar al-'Adjā'ib* (*Abrégé des Merveilles*, transl. Carra de Vaux, p. 9) the prophet asked the archangel Gabriel "Hast thou ever seen thy Lord?" The archangel was troubled and replied "O Muḥammad, between Him and me there are seventy thousand veils of light; if I approached a single one of these veils, I should be consumed".

God does not appear in the Ḳor'ānic descriptions of Paradise. He is however present at the last judgment which is described in the Ḳor'ān in a fashion quite similar to that of Christian traditions and imagery.

The words *djanna*, *firdaws* and *'adn* are also employed to designate the earthly Paradise (see ADAM).

For a plan of Paradise see the *Ma'rifat Nāmah*; the pictures in this work are reproduced in Carra de Vaux's *Fragments d'Eschatologie Musulmane* (brochure) Brussels, 1895.

(B. CARRA DE VAUX.)

DJANNĀBA (also DJANNĀBA, DJUNNĀBA) a town in Persia. In the middle ages it belonged to the province of Arradjān and played a not inconsiderable part as one of the more important harbours of the Persian Gulf. It did not lie directly on the coast but (in N. Lat. 29° 30'; E. Long. 50° 40' Greenw.) about $2^1/_4$ miles from it at the top of a bay (northeast of the island of Khārak),

which connects it with the open sea. Djannāba used to be a flourishing industrial centre; the cloths manufactured there were particularly prized and formed one of the principal exports. The town is now in ruins; near it is a village, whose name Djenawur probably represents the ancient appellation of the town corruptly reproduced by the English ear.

AL-**DJANNĀBĪ**, ABŪ MUḤAMMAD MUṢṬAFĀ B. ḤASAN B. SINĀN B. AḤMAD AL-ḤUSAINĪ AL-HĀSHIMĪ, an Arab historian, born in Djannāba in Persia, became Ḳāḍī of Aleppo and died in 999 = 1590 after being deprived of his office. He wrote a history of 32 Muhammadan dynasties in as many chapters, which has survived in several manuscripts, entitled *al-'Ailam al-Zākhir fī Aḥwāl al-Awā'il wal-Awākhir* which is usually called the *Ta'rīkh al-Djannābī*. This work was translated into Turkish by the author himself, (s. Flügel, *Die ar., pers. und türk. Hdss. der k. k. Hofbibliothek zu Wien*, Vol. ii. Nº. 853); he also made an epitome of it (*ibid.* 854). Part of it has been edited as: *Mustaphae filii Hussin Algenabii de gestis Timurlenkii seu Tamerlanis opusculum Turc. Arab. Pers. Latine redditum a Jo. Bapt. Podesta, Viennae Austriae 1680.*

Bibliography: Wüstenfeld, *Geschichtsschreiber der Araber*, Nº. 538; Brockelmann, *Gesch. d. Ar. Lit.*, ii. 300. (C. BROCKELMANN.)

AL-**DJANNĀBĪ**, ABŪ SA'ĪD, an important Karmaṭian chief, began life as a corn-merchant. Hamdān Ḳarmaṭ appointed him *dā'ī* (q. v., p. 895, missionary) for Southern Persia; he was at first very successful there by flattering the Persians at the expense of the Arabs; he established a socialistic system among his adherents, whose property was shared in common under his administration; but the Caliph's policy ruined this mission.

Hamdān Ḳarmaṭ then sent Abū Sa'īd to Baḥrain; shortly before there had been an insurrection of the slaves in this province. The missionary found a favourable soil; he made numerous converts and married the daughter of an individual of importance. We do not exactly know at what date Abū Sa'īd had been appointed *dā'ī*; but we find that in 286 (899) he had subjected a large part of Baḥrain and taken Ḳaṭīf. In 287 his partisans were exceedingly numerous around Hadjar the capital of Baḥrain and were approaching Baṣra. The Caliph Mu'taḍid sent an army of 2000 men against them, which was increased by a considerable number of volunteers. This army was cut to pieces by the Karmaṭian leader; its general was taken prisoner, then set at liberty, the other prisoners were massacred.

About 290 (903) Abū Sa'īd took the town of Hadjar after a long siege by cutting off the water-supply; he then subjected Yamāma and invaded 'Omān. At the height of his successes he was assassinated with several of his officers in his palace at Laḥsā (see AL-AḤSĀ) in 301 (913). It is supposed that this murder was instigated by the Grand Master 'Ubaid Allāh, who then proclaimed himself Mahdī, and who possibly had some reason to be afraid of Abū Sa'īd.

Abū Sa'īd was venerated after his death. His partisans believed that he would return; a horse was always kept saddled at the door of his tomb. The Karmaṭians of Baḥrain call themselves Abū Sa'īdis after him. He left seven sons of whom the youngest, Sulaimān Abū Ṭāhir, succeeded him after dispossessing the eldest.

DJAORĀ, state in Mālwā, Central India; area, 568 sq. m.; pop. (1901), 84,202, of whom 19% are Muḥammadans, mostly in the capital; revenue, about £ 60,000; tribute, £ 9000. The state was founded in 1817, under guarantee from the British government, by Ghafūr Khān, Afghān, who had been confidential agent of Amīr Khān at the court of Hōlkar; and a *nazarāna* of £ 13,000 is still paid to Hōlkar on every succession. Opium is a profitable crop.

Bibliography: *Central India Gazetteer*, v. pp. 180—219 (Bombay, 1908); C. U. Aitchison, *Collection of Treaties*, (Calcutta, 1909). iv. 373 sq. (J. S. COTTON.)

AL-**DJĀR**, formerly an Arab seaport on the Red Sea, 20 stations south of Aila, 3 (or 2) from al-Djuḥfa, and a night's journey (according to others: 3 stations) from al-Madīna. In spite of the want of good drinking-water, which had to be brought from Yalyal, the town with the island of Ḳarāf lying before it, whose name should be compared with the *Κοπὰρ κώμη* of Ptolemy, was of great importance as a port of discharge for ships from Egypt, Abyssinia, South Arabia and China and a centre of supplies for al-Madīna (cf. e. g. Ṭabarī, iii. 1941) until it had gradually to yield this position to Yanbu' — apparently not before the end of the middle ages. While the name at least is mentioned by travellers down to 1800, it appears to have been supplanted in recent times by *Buraika*, *Burika*, which obviously denotes the bay of al-Djār. Imposing ruins are still to be found on the peninsula which encloses this bay.

AL-**DJARĀD**, the locust. According to Damīrī there are large and small, red, yellow and white varieties; the females of the yellow are black. Ḳazwīnī distinguishes flying (*al-fāris*) and hopping (*al-rādjil*). They have the head of a horse, the eyes of an elephant, the neck of a bull, the horns of a mountain antelope, the breast of a lion, the body of a scorpion, the pinions of an eagle, the legs of a camel, the feet of an ostrich and the tail of a scorpion. They have six

legs, two in front, two in the middle and two behind, on the latter of which are saws. Locusts follow a leader and assemble like an army for warfare; if the first turns aside the others follow. According to Damīrī the females lay their eggs in hard stony ground, which cannot be broken even with sharp tools; the female strikes the ground with its tail (ovipositor) and a crevice is made into which it lays the eggs. The laying of the eggs and their development is more correctly described by the Ikhwān al-Ṣafā and essentially following them by Ḳazwīnī; the females seek out good soil, dig holes with their tails, in which they conceal the eggs, fly away and perish of cold or are killed by birds; when spring comes these buried eggs open and little creatures appear on the surface of the ground, which devour all the seeds etc., that they can find till they become big and are able to fly. They then rise into the air and fly to another country where they in their turn lay eggs. When locusts approach a town, people have to conceal themselves; if they see no human beings about, they proceed on their flight, which they also do if one burns locusts and they notice the smell from them.

Their sudden appearance in vast bodies has given rise to the belief that they come from the sea and the hosts of the resurrected on the day of judgment are, probably for this reason, compared to locusts (Ḳor'ān, liv. 7). They may be killed by any means; they are allowed as food — as flesh without blood, like fishes — at any time and in any form; but "a date is better than a locust". The phrase "as hospitable as the man who gave his protection to the locusts" refers to a Beduin whose courtyard locusts had invaded. He threatened with death those people who wished to gather them and guarded them till the sun rose and the creatures flew away. Then he said: "Now you can do what you like with them, for they have left my protection".

DJARĀDJIMA, less correctly Djarādjima, plur. of Djurdjuma, according to Yāḳūt, ii. 55, the name of a town on the hills of al-Lukkām (Amanus) near the vitriol pit between Bayās [q. v., p. 684] and Būḳā [q. v., p. 775]. The plural is said to mean the inhabitants of this town but is rather the plural of the ancient Gurgum, which is found in the inscription of Panammu, where, as elsewhere, it denotes a district or possibly a kingdom and hence the ancient population of this area. This old name possibly remained attached to the town mentioned by Yāḳūt, while the capital of the ancient Gurgum is rather to be located in Mar'ash. The Djarādjima play a part during the Arab conquest and under the Umaiyads but the name afterwards disappears from history. They are identical with the Mardaites [q. v.] according to Lammens, *Étude sur le Règne du Calife Omaiyade Mo'âwia I*, p. 17.

Bibliography: Balādhurī, ed. de Goeje, p. 159 *et seq.*; Sachau, *Zur historischen Geographie von Nordsyrien* (*Sitzungsber. der Preuss. Akad.*, 1892), p. 320; Schiffer, *Die Aramäer*, p. 92 *et seq.*

DJARASH, the ancient Gerasa, at the foot of the southeastern part of the 'Adjlūn range, in a little valley whose waters flow into the Wādī 'l-Zarḳā, the Wādī 'l-Dēr or Wādī Djarash, the Chrysorroas of the Greeks. The town is first mentioned in the Maccabee period and appears to have been one of the Hellenistic towns which arose after Alexander the Great. After being incorporated in the Jewish kingdom by Alexander Jannaeus, it again won its freedom probably through Pompey's efforts and was reckoned as a part of the Dekapolis. From the time of Trajan it belonged to the Roman province of Syria but about 160 A. D., it was allotted to the province of Arabia till it was ultimately incorporated in Palaestina secunda. In this latter period Gerasa became of predominant importance and from it date the splendid ruins, which arouse the admiration of travellers but are unfortunately constantly suffering from the vandalism of the present inhabitants. In the Christian period it was the see of a Bishop as ruins of churches, some of them converted from temples, still show. The dominating position of the town is also clear from the fact that in the time of Jerome the ancient Gilead was called Gerasa, of which usage a trace is also found in the Talmudic literature.

Gerasa was, like most of the towns of the province of Palaestina secunda or as the Arabs called it, al-Urdunn, conquered by Shuraḥbīl and is mentioned by the geographers among the towns of this district. According to Ya'ḳūbī the population was, as in the neighbouring towns, only half Arab. We are reminded of the usage just mentioned, when Muḳaddasī calls the Djabal 'Adjlūn the Djabal Djarash. But the town was no longer of any importance, as is also clear from the absence of Arab buildings among the ruins. There is but one reference to a castle which Ṭughtigin (1103—1128 A. D.) the Atabeg of Damascus had there, and this was taken and destroyed by King Baldwin in 1121; but no distinct traces of it can now be seen. From the account of one who had seen it, Yāḳūt in the first half of the xiii^th^ century gives a description of the town which was then entirely in ruins, through which ran a stream, which drove several mills; the hills around, the Djebel Djarash, had on the other hand numerous farms and villages. He also quotes a poem from the Umaiyad period, in which a *ḥimā* (reserved grazing-ground) of Djarash is mentioned (Nöldeke, *Delectus Veterum Carminum Arab.*, 49, 5).

The once so splendid city remained in this desolate condition until in 1878 it was repopulated by Circassians, who have built a little village on the east side of the Wādī, which covers a very insignificant part of the extensive ancient town. This village is now the capital of the nāḥiya of Djarash, which belongs to the Ḳāimmaḳāmlik of 'Adjlūn and like the latter is under the Mutaṣarrif of Damascus.

DJARBĀ or Djarbā' lies on the ancient Roman road from Boṣrā to the Red Sea, an hour's journey to the north of Adhruḥ. The Prophet on his expedition to Tabūk, concluded a treaty with the representatives of Djarbā, by which the inhabitants were granted security and liberty of commerce on payment of an annual tribute. The population was Christian, not Jewish as Yāḳūt says. It is frequently mentioned in the Ḥadīth to indicate the size of Muḥammad's "cistern" (*ḥawḍ*). This cistern is as large as "from Adhruḥ to Djarbā". This is the original form of the tradition. In later versions the distance "three nights between Adhruḥ and Djarbā" has been added. Since then the expression "between Adhruḥ and Djarbā" has become synonymous with a considerable distance. If this exaggeration found a place in collections on tradition, it was because Djarbā itself had disappeared at an early period. The site however again played a part in the wars of the Crusading period. In 1182 Ṣalāḥ al-Dīn lay here for a period opposite the enemy (See Clermont-Ganneau in the *Revue Biblique*, N. S. iii. 469).

DJARĪ, a style of Turkish calligraphy, derived from the *naskhī*, *dīwānī* and *ta'līḳ*; its beauty lies in the fact that it is written obliquely from top to bottom and the words are placed above one another; it ought also to be written so that the lines rise elliptically towards the ends; it is the style of writing used for the introductory portions of firmans. There are excellent examples in Bresnier, *Cours de la langue Arabe*, p. 144, 145 (Cl. Huart, *Les Calligraphes et les Miniaturistes de l'Orient Musulman*, p. 64 *et seq.*).

DJARĪB (a.) a measure of capacity, used chiefly for cereals, thence a measure of area = the amount of land that can be sown with a djarīb of corn. Its size varies according to place and time. Cf. Sauvaire in the *Journ. As.*, viii[th] series, vii. (1886), p. 158—161 and viii. (1887), p. 485—488. For farther information see the article metrology.

DJARĪD, originally a palm-branch stripped of its leaves, came to be the name of the shaft of a javelin without a head used in equestrian exercises. The game of *djarīd* was once very popular among the Ottoman cavalry; Sulṭāns encouraged it by watching it; Aḥmed I on one occasion did not disdain a match with his grand vizier Naṣūḥ Pasha. Murād IV. was gifted with such great strength that he could pierce several shields with this javelin pointed with iron; he once threw one from the Eski Serāi, which fell at the foot of the Mosque of Sulṭān Bāyazīd, where a stone was erected to commemorate this incident. The *djindī* (= *djundī*) were horsemen who particularly excelled in throwing the *djarīd*. — At Damascus, in the springtime the custom has survived among the young men of going outside the town to throw the djarīd; for this purpose they provide themselves with a rod, the end of which is shaped like a crozier and which is called *sikkūra* (first-fruits).

DJARĪDA (a.), the most usual word for newspaper in Arabic like *ghazeta* in Turkish and *rūznāmah* in Persian. This seems a fitting opportunity to collect some of the chief data on the history of the newspaper among Muḥammadan peoples, although a review dealing with the subject in some degree of completeness would far exceed the limits of an article in an encyclopaedia. In various sections the necessary preparatory work has not yet been done so that the following must necessarily be rather incomplete. For the Arabic Press, which on account of the wide area it covers as well as its intrinsic importance is undoubtedly the most important, we are reproducing in a somewhat altered form Martin Hartmann's sketch which has already been printed in *Specimen d'une Encyclopédie Musulmane*, p. 11 *et seq.* He is also responsible for the section on China (vi). The accounts of other areas have been prepared by the editors from various materials.

1. The Arabic Press.

On the 12[th] Djumādā I. 1244 (= 20[th] Nov. 1828) there appeared in Cairo the first number of the Turkish Arabic newspaper, *al-Waḳā'i' al-Miṣrīya*, the organ of the Egyptian government, founded by Muḥammad 'Alī and published twice or thrice a week. In the *Journal Asiatique* for September 1831 (ii. 8, p. 238—249) Reinaud gave a detailed account of this "*fondation qui jusqu'ici n'a pas eu d'autre exemple dans les contrées musulmanes*". The periodicals and a newspaper in French which appeared in Egypt in the three years of the Napoleonic occupation (see Reinaud, *op. cit.*, p. 249) are not taken into account. This was the beginning of the newspaper in the Islāmic east which has since attained such enormous proportions. This organ of the Egyptian government still exists after a chequered and eventful career. It was not till 29 years later on the 1[st] January 1858 that a second paper appeared: the half French, half Turkish *Ḥadīḳat al-Akhbār* published by Khalīl al-Khūrī in Bairūt supported by the Turkish government of whose representatives in Syria al-Khūrī was always an ardent admirer; at first it appeared twice a week and now it is published daily. (See Reinaud in the *Journ. As.* v. 2, 309—325 and Fleischer in the *Zeitschr. d. D. Morgenl. Ges.*, xii. 330—333).

About four years later the *Barjīs* newspaper, mentioned by Mohl in the *Rapport Annuel* for the 30[th] June 1863, appeared in Paris. The first really great Arabic newspaper, beside which all earlier ones seem merely the hackwork of second-rate journalists, was *al-Djawā'ib*. Founded at the end of July of 1860 in Constantinople by Aḥmad Fāris al-Shidyāḳ [q. v.] a Maronite convert to Islām and amply subsidised by the

Turkish government, it effectively took up the cause of Islām and became a newspaper with a world-wide circulation penetrating into the farthest corners of the earth and receiving publications and correspondence from them. It reached its zenith at the end of the 70's and early 80's. A selection of the best articles is contained in the collection edited by al-Shidyāḳ himself entitled *Kanz al-Raghā'ib fī Muntakhabāt al-Djawā'ib*, Vol. I.—vii.

In addition to their organ in Bairūt, which was mainly intended to keep the numerous official and unofficial foreigners in Bairūt in touch with the views of the Turkish authorities in Syria, the latter instituted a second in Damascus, the Arabic-Turkish *Sūrīya* called after the wilāyet in the capital of which it appeared. To the same class of government organs belongs the Arabic-Turkish *al-Furāt* which has appeared in Aleppo since 1866. The foundation of this paper is connected with the reorganisation of the Turkish administration at this period; cf. the act for the institution of wilāyets of 1867. It was then laid down and has since been the rule, in principle at least, that the capital of each wilāyet should have a printing press and that the chief officials of the province should see to the publication of a yearbook (*Sālnāma*) with the most important news from the administrative area and of a newspaper.

In 1869 the official French-Arabic *Ḥadīḳat al-Akhbār* in Bairūt ceased to be the only newspaper in the town on the publication of the purely Arabic *al-Bashīr*, the weekly organ of the Jesuit missionaries who had just then moved from Ghazīr to Bairūt. About the middle of 1870 another began to appear, which, in opposition to *al-Bashīr*, which represented French Catholic interests solely, endeavoured to awaken an enthusiasm for general culture, particularly an interest in the national life and literature, *al-Djanna*, likewise wholly in Arabic, appearing twice a week till No. 1547 of the 7th July 1886. The founder Buṭrus al-Bustānī [q. v.] was equal to Fāris al-Shidyāḳ in business ability at least, but inferior in linguistic knowledge and readiness of pen. After the death of al-Bustānī on the 1st May 1883, the paper was continued by his son Salīm al-Bustānī. In addition to *al-Djanna*, al-Bustānī also published the smaller paper *al-Djunaina* (survived only three years) and the fortnightly *al-Djinān* (appeared till 1880).

The Muslims of Bairūt did not allow the laurels of the Jesuits and of the "young Arab" party, which although not French Catholic, friendly to foreigners and nationalist was on the whole quite unenterprising, to rest unchallenged. In 1874 they founded the weekly paper *Thamarāt al-Funūn* renamed *al-Ittiḥād al-'Othmānī*, since the Turkish revolution, a paper which, besides giving the usual news very inadequately both in matter and form, formed a particularly dull example of the inflated phraseology of hypocritical and pedantic Shaikhhood. About 1874 a newspaper was founded, called *al-Taḳaddum*, whose motto was constant progress and unflinching warfare on all the backward elements in the country. The finest spirits of young Syria worked on it, such as Iskandar al-'Āzār and the highly gifted idealist Adīb Isḥāḳ who died in 1885 (on him cf. G. Zaidān, *Mashāhīr al-Sharḳ*, ii. 75 *et seq.* and Khairallāh in *Revue du Monde Mus.*, xix).

On the 18th October 1877 Khalīl Sarkīs, son-in-law of the above mentioned Buṭrus al-Bustānī, published the first number of the *Lisān al-Ḥāl*. Although the new paper had similar aims to *al-Djanna* and competed to some extent with it, Syria was large enough for both. Neither of them interfered much in politics, they presented events as far as possible in a colourless form, always with a careful regard for the views of the government. They were also quite neutral as regards religion. In the year 1880 a new party appeared; the Maronites founded the paper *al-Miṣbāḥ* to meet the attacks of the Curia. The *Kawkab al-Ṣubḥ al-Munīr* and *al-Nashra al-Usbū'īya* took up the Protestant interest. The Greek Orthodox Church founded *al-Hadīya* as its official organ. A noteworthy enterprise was the political paper *Bairūt* 1886 which appeared twice a week, which may be described as "independent, though supporting the government and Islām" and was supported by the authorities as an antidote to the Muslim extremists of the *Thamarāt al-Funūn*, which was often a thorn in the side of the government. When on the 1—13th March 1888 Bairūt became the capital of an independent wilāyet, a second paper of the same name was founded as the official organ of the provincial government, but distinguished, from the older *Bairūt* by the addition of *al-Rasmīya*. Of other Bairūt newspapers and magazines we may also mention from the list in *al-Hilāl* 1892 (cf. *Bibliography*), the following political papers: 1. *al-Zahra*; 2. *al-Fawā'id*; 3. *al-Mishkāt*; 4. *al-Aḥwāl*. *Nadjāḥ*; 5. *al-Naḥla*; 6. *al-Nafīr*; 7. *al-Aḥwāl*. After the Turkish revolution there were 26 newspapers and periodicals appearing in Bairūt; the following figures are given for 1912: 8 dailies, 17 weeklies and 12 magazines. Cf. *Revue du Monde Mus.*, xix. 76 *et seq.*

In addition to the Bairūt papers and the official organs *Sūrīya* and *al-Furāt* (see above) the following Syrian political papers may be mentioned: 1. *Lubnān* 1891; 2. *al-Rawḍa* 1894; 3. *al-Arz* (in Djūnia) 1895, all appearing weekly "in Lebanon" with several others, now (1912) 15 in all, according to the *Revue du Monde Mus.* (*loc. cit.*); 4. *al-Shām*, a Damascus weekly; 5. *Ṭarābulus al-Shām*, 1893, a Tripolis weekly; 6. *al-Shahbā'*, a weekly in Aleppo 1877.

But the daily press in Syria had a struggle for existence. The population had long been used to straitened circumstances and not even its well-to-do members could be induced to guarantee sufficient support, while the government at once took rigorous proceedings to suppress the slightest free expression of opinion. The greater number of Syrian journalists therefore went to Egypt. In 1876 the Lebanese Salīm Taḳlā (cf. Zaidān, *op. cit.*, ii. 99) founded the first Arabic daily paper in Alexandria: *al-Ahrām* i. e. *the Pyramids*, an able and industrious advocate of French interests in the country. Another Syrian soon afterwards founded a weekly: *al-Maḥrūsa* in Cairo. The enterprising fortnightly *al-Muḳtaṭaf*, which had been founded in Bairūt in 1877 by three students of the American College, was also soon transferred to Cairo, where its editors founded the important daily *al-Muḳaṭṭam*, which is an advocate of English interests. Egypt, where a more intelligent government laid little restriction on the press and under the English occupation a freedom reigned

which was only appreciably limited about 1890, now became the Eldorado of the numerous young Syrians with literary talent to whom their native land did not offer the slightest prospect of a livelihood. We cannot go into the details of this migration of the press to Egypt here, but the reader may be referred to M. Hartmann, *The Arabic Press of Egypt*, London 1899 and above, p. 1019. The other people of the country were very slow in following the impetus given by the enterprising Syrians. It is true that the Copts had founded their bi-weekly *al-Waṭan* in 1878, which still appears, but this is a very insignificant sheet and none of its companion papers since issued are worthy of mention. Islām continued to hold aloof from the press. It was not till 1890 that a political daily with some pretensions to style appeared, *al-Muʾaiyad*, admirably edited by the able Shaikh ʿAlī Yūsuf. A few fanatical rags came into existence alongside of it. The nationalist *al-Liwāʾ*, founded by Muṣṭafā Kamil, now called *al-ʿAlam* combats that organ which advances international Islām. A third important Cairo newspaper is *al-Djarīda*, which steers a middle course i. e. recognises the fact of English occupation.

The following figures are significant of the growth of the press: in 1892 al-Anṣārī (cf. Bibliography) mentions 40; in 1890, Hartmann (*op. cit.*), 167 including those that had already ceased to exist; in 1909 there were 144 different newspaper and periodicals, 90 in Cairo and 45 in Alexandria. *Revue du Monde Musul.*, xii. 308.

For the other provinces of the Turkish empire the populations of which are wholly or in part Arab, I shall only mention the oldest official newspapers (cf. Huart in the *Journal Asiatique*, vi. 5, p. 172), viz. 1. *al-Baṣra* for the wilāyet of Baṣra; 2. *al-Zawrāʾ* for the wilāyet of Baghdād; 3. *Ṣanʿāʾ* for the wilāyet of Yaman (*al-Yaman*). In Mecca a newspaper has appeared since 1908, *al-Ḥidjāz*, cf. below under Turkey.

As in other respects also the Maghrib is the most backward as regards the press. Only since 1862 has there been a newspaper *al-Rāʾid al-Tūnisī* in Tunis; in 1887 appeared *al-Ḥāḍira*; in 1889 *al-Zahra* also and since 1892 *al-Baṣīra*. In recent years however this number has been considerably increased. Cf. *Revue du Monde Mus.*, vi. 342 *et seq.* Tunis is peculiar in the possession of two Jewish Arabic papers printed in Hebrew characters entitled: *al-Bustān* אלבסתאן, *al-Mubashshir* אלמדריר. Both are written in a mixture of the vulgar and written language. In Tripolis the government has an official organ, *Tarābulus al-Gharb*. In addition to it Washington-Serruys only mentions *al-Taraḳḳī*. In Algeria we have the following papers, *al-Mubashshir* (Algiers) and *Tilimsān* (Tlemcen) and since 1907 the *Kawkab Ifriḳiya* and the *al-Djazāʾir* since 1908. Newspapers have only been published in Morocco at Tangier since 1905; cf. *Revue du Monde Musul.* ii. 8; iv. 619.

Malta occupies a special position. Literary activity and printing-presses only came into the island with the English occupation. These Franks thought for a time that it would be possible to install a classical Arabic alongside of the peculiar dialect of the natives. This was the origin of the political paper *Māliṭa* which is mentioned in *al-Hilāl* for 1892. These classical Arabic experiments however proved fruitless, and a written language was developed which essentially represented a dialect of one part of the island and was printed in Roman type. In this language *Il Habbar Malti* began to appear in 1879.

Even in lands which are not Arab there is a not inconsiderable production of Arabic papers. They may be divided into three classes: 1. those that further Islām; 2. those that defend Turkish rule; 3. those with other aims. The important newspaper *al-Djawāʾib* in Constantinople (see above) was pre-eminently devoted to the cause of Islām and the Turkish government. According to *al-Hilāl* 1892 the following papers also were published there: *a.* political: 1. *al-Iʿtidāl*; 2. *al-Ḥawādith*; 3. *al-Salām*; 4. *al-Ḥaḳāʾiḳ*; 5. *al-Munabbih*; *b.* scientific: 1. *al-Insān*; 2. *al-Kawkab* and a legal paper *al-Ḥuḳūḳ* in Arabic and Turkish. Cyprus was the only other place in the Sulṭān's empire to possess a political Arabic newspaper: *Dīk al-Sharḳ* (according to *al-Hilāl*, 1892). The same authority (and following it Washington-Serruys, p. xx.) mentions only a single political paper in India, *Nukhbat al-Akhbār*, without giving further particulars, cf. below under India. There should be noted the attempt to create an organ for the Jews of India and Mesopotamia, which is made by a volume in an Arabic jargon in Hebrew characters entitled: פֶּרַח "The Jewish Gazette Paerah", in Calcutta. Subsidised by the Rothschilds of Eastern Asia, Sassoon & Co., and no doubt serving their commercial ends, the paper circulated throughout the whole of Arabic speaking Judaism of Asia.

Only the following papers are mentioned by *al-Hilāl* 1892 as appearing in the west: 1. *al-Mustaḳill*, in Italy; 2. to 9. in France, viz. 2. *al-Anbāʾ*; 3. *Abu 'l-Hawl*; 3. *al-Ittiḥād*; 4. *al-Baṣīr*; 5. *al-Ṣadā*; 6. *al-Ḥuḳūḳ*; 7. *al-Bardjīs*; 8. *al-Shuhra*; 9. *al-ʿUrwa al-Wuthḳā*; 10. to 12. in London, viz. 10. *al-Ittiḥād al-ʿArabī*; 11. *al-Khilāfa*; 12. *Mirʾāt al-Aḥwāl* (edited by Rizḳ-Allāh Ḥassūn, on whom see my *Muwashshaḥ*, p. 78 and 232); 13. *al-Kashkūl*, Tiflis, with the note "appears in Tartar, Persian and Arabic"; 14. *Ḍiyāʾ al-Khāfiḳīn*, London, with the note "appears in Arabic and English"; 15. *Kawkab Amīrika*, New-York; Washington-Serruys also gives: 16. *al-Mirṣād*, Marseilles; 17. *al-Burāzīl* and 18. *al-Rashīd*, both in Brazil. These lists may be increased from Hartmann, col. 227 by the addition of *al-Aṣmaʿī*, San Paolo (Brazil), *al-Hādī*, Philadelphia, and *al-Aiyām*, New-York, and from Hartmann in *Or. Littztg.* 1899, p. 58 *et seq.* by 15 new papers, cf. also *Revue du Monde Musulm.*, xix. 85 *et seq.*

A general idea of the language of the Arabic press may most readily and clearly be obtained from Washington-Serruys. At first halting and laboured, often not in accord with the rules of grammar, it gradually strove to attain greater correctness and fluency. Constant close contact with European newspapers produced in many journalists an estrangement from the genius of the Arabic language and many idioms can at once be recognised as adopted from European phraseology. More educated men particularly Adīb Isḥāḳ (see above) early sought to combat such tendencies. At the present day writers in the more important papers endeavour to write pure Arabic. It is only in the comic papers that the spoken language is used by the press.

As regards contents, the Arabic press has made

great progress. For long the only material available in addition to obsolete news from the west was a brief survey, palatable to the government, of doings in Turkey and the local news. *Al-Djawā'ib* (see above) alone was a distinguished exception. The daily papers *al-Ahrām*, *al-Mu'aiyad*, *al-Mukaṭṭam*, *al-Liwā* and many others are now covering a wider field and cultivating an interest in politics and intellectual pursuits. There still survives in the less important papers, a lower ideal, the petty squabblings of parties and the most scurrilous personalities. In the first part of his *al-Ḍiyā'*, the worthy Ibrāhīm al-Yāzidjī raised a strong protest against this but he goes too far when he demands a press law.

We must also devote special attention to the periodical literature. In this field numerous undertakings have arisen, which endeavour to disseminate useful knowledge, scientific as well as political and intellectual. Of the older ones we may here mention: *a*. defunct: 1. *al-Ṣafā* (published by a Druse); 2. *al-Ṭabīb*; 3. *al-Mihmāz*; *b*. still appearing: *al-Kanīsa al-Kāthūlīkīya*. Schroeder further mentions three others: *Silsilat al-Fukāhāt fī Aṭā'ib al-Riwāyāt*, *Dīwān al-Fukāhāt* and *Mir'āt al-Sharḳ*, which are now however defunct. Since 1892 Zaidān's periodical *al-Hilāl* (Cairo) has been untiringly active in this directions, and the Jesuit missionaries in Bairūt have been publishing the fortnightly *al-Mashriḳ* since the beginning of 1898. The Cairo *al-Manār* (since 1897) edited by Rashīd Riḍā enjoys the largest circulation in the whole Muḥammadan world; next to it comes *al-Muḳtabas*, edited by Muḥammad Kurd 'Alī, which has been published in Damascus since 1908 (cf. *Revue du Monde Mus.*, ii. 417 *et seq.*) We may also mention: *al-'Alam al-Islāmī* published in Cairo since 1905 (*Revue du Monde Mus.*, iv. 192), *Lughat al-'Arab* (Baghdād) edited by Père Anastase Marie, *al-'Ilm* (Nedjef) edited by al-Shahristānī. We must not omit to mention the paper for women *al-Anīs al-Djalīs*, which was published by Alexandra Averino in Alexandria, after two other women's papers in Egypt, whose editresses were merely figureheads, had disappeared. Women nowadays take considerable part in journalistic work; cf. for Syria: *Revue du Monde Mus.*, xix. 86 *et seq.*

A brilliant future may safely be predicted for the Arabic press. Among the Christians of Syria there are a large number of earnest, hardworking and able men. Among the Egyptians also there is an awakening, and here it is the Muslim element that is devoting itself to journalism with enthusiasm and success. Europeans also have often had a share in the production of Arabic newspapers.

(M. HARTMANN.)

II. THE TURKISH PRESS.

Newspapers and periodicals in Turkish are not confined to Turkey, they appear also in the Muḥammadan lands of Russia, but the latter of course are either in Āzarī-Turkī or in the Tatar dialects of Kazan and Central Asia. We will deal first with the Ottoman Turkish press and then with the Russian Turkī.

a. Turkey. The beginnings of the Turkish press in Constantinople are not only contemporary with those of the Arabic press but are also equally clearly imitations of the Paris government organ. In 1831 an official paper in French, the *Moniteur Ottoman* was published in Constantinople, and in the next year a Turkish edition also began to appear (cf. *Revue du Monde Musulm.*, iv. 197) entitled *Taḳwīm-i Waḳā'i* and after a brief interval has survived to the present day as the organ of the government; since the revolution it has been published daily. In 1843 a second paper *Djarīda-i Ḥawādith* appeared. Besides these two there were according to Ubicini in 1851 31 newspapers in the whole Ottoman empire, of which 11 were published in Constantinople in French, Italian, Greek, Armenian and Bulgarian. By 1876 the number of Turkish papers had grown to 13, among which we may mention the following, some of which are still in existence: *Baṣīrat*, the organ of the Old Turkish party; *Tardjumān-i Aḥwāl*, *Waḳit*, *Istiḳbāl* and *Ṣadāḳat*, which favoured the young Turkish movement and the *Tardjumān-i Ḥaḳīḳat*, edited by Aḥmed Midḥat [q. v.]; *'Ibret*, Kamālbeg's [q. v.] paper, which with the *Taṣwīr-i Afkār* represented the modern Turkish movement, as well as the comic paper *Khayāl*. Besides these Turkish papers there were at this time 9 Greek, 9 Armenian, 3 Bulgarian, 2 Hebrew, 1 Arabic (the above-mentioned *al-Djawā'ib*), 7 French (including the official *Journal de Constantinople*, afterwards *la Turquie*), 2 English (including the *Levant Herald and Eastern Express*) and 1 German (*Konstantinopler Handelsblatt*). We must further mention the Turkish papers, which are printed for Armenians and Greeks who speak Turkish, in their national alphabets. But these sections of nationalities who have lost their own language are unimportant and so is their press. With the accession of 'Abd al-Ḥamīd II troubled times began for the Turkish press; the censorship was stringent, several papers were suspended, notably those of the Young Turkish party, who were thus compelled to found new organs outside Turkey, in Paris, London, Geneva, etc., sometimes in French or with a French supplement, among which the *Meshweret* edited by Aḥmed Riḍā is very well known. Cf. the titles of the others in P. Fesch, *Constantinople aux derniers jours d'Abdul-Hamid*, p. 333, 349, 393. The most popular and best edited papers during this period were the *Iḳdām*, edited by Aḥmed Djewdet [q. v.] and the *Ṣabāḥ*, both of which still exist as well as the illustrated weekly *Serwet* (*Tharwat*)-*i Funūn*, edited by Aḥmed Iḥsān [q. v.].

All this was suddenly changed with the Ottoman revolution; there was a tremendous revival in the press, newspapers sprang up like mushrooms often enough only to disappear as quickly and make place for others. The *Revue du Monde Musulm.* has taken great pains to make a list of these products of the press, so that we may refer the reader to it. In Vol. viii., p. 97 *et seq.* will be found a list of newspapers and periodicals which have appeared in the whole Ottoman empire with the authorization of the law. This list contains no fewer than 474 titles; this of course includes Arabic, Greek, and Armenian also. Many of these have already disappeared and others have since arisen.

b. Russia. The Muḥammadan press in Russia is of comparatively recent origin and has been mainly brought into being by the exertions of two men: Ismā'īlbey Gasprinski and Aḥmadbey Agayeff. The first named founded at Baghče Serai in 1879 the Tatar paper *Tardjumān*, (still in existence) and had also a share in the foun-

dation of other papers. Aḥmadbey Agayeff founded the Āzarī Turkish paper *Irshād* in Baku. When this paper was suspended by the Russian censor, they resorted to the usual subterfuge of publishing it again under other names so that the *Irshād* in course of time became the *Taraḳḳī* and later the *Ittifāḳ*, till finally Aḥmadbey sought and found a freer field in Turkey. In the volumes of the *Revue du Monde Musulm*. about 50 titles of newspapers and periodicals appearing in Russia are given, of which the greater part have had but a brief career on account of political or financial difficulties. The press in Russia is on the whole only of local importance; its centres in addition to the two places above-named are at Tiflis, Kazan, Orenburg, Astrakhan, Ufa, Ḳarasu Bazar, Tashkent, St. Petersburg etc. The language is not always Turki-Tatar; there are also Arabic and Russian papers, which deal with Muslim interests. The new Russian periodical *Mir Islama* has recently begun to take an interest in the Muslim press in Russia and for example in i. 257 *et seq*. the Orenburg papers *Waḳt*, *Shūrā* and *Dīn u Ma'ishat*, as well as the Kazan *Bayān al-Ḥaḳḳ* and the Baku *Nadjat* are reviewed in detail. The continuation of this review will now for the first time make it possible to get a clear idea of the condition of the Muslim press in Russia.

III. PERSIA.

There is but little to be said of the Persian press before the Persian revolution. E. G. Browne (*The Persian Revolution*, p. 242) gives the following account of it: "Before the granting of the Constitution in 1906 there existed in Persia no Press worthy of the name. Such papers as there were — the *Īrān* (Persia), the *Sharaf* (Honour), the *Iṭṭilā* (Information) etc. were lithographed sheets appearing at irregular intervals, and containing no news or observations of interest, but only panegyrics on various princes and governors, and assurances that every body was contented and happy. A few good Persian newspapers (such as the *Akhtar* or Star at Constantinople, the *Ḥabl al-Matīn* at Calcutta and the *Thuraiya* and *Parwarish* at Cairo) were from time to time established outside Persia and enjoyed a certain circulation within its borders". As in the adjoining country of Turkey a complete change was brought about by the revolution, so that (cf. *Revue du Monde Musulm*., ix. 682) in Ṭeheran alone no fewer than 31 newspapers and periodicals appeared in 1908, 3 in Tabrīz and 2 each in Iṣpahān, Rasht and Bandar Bushīr. A Teheran edition of the *Ḥabl al-Matīn* was also published; we may also mention here the *Madjlis* (since 1906), *Ṣūr-i Isrāfīl* (since 1907) *Īrān-i Naw* (since 1909), all at Teheran and the *Muẓaffarī* at Bandar Bushīr (since 1902), and for the others refer the reader to the information contained in the above oft quoted *Revue*. Browne's verdict on these recent products of the Persian press is very favourable, at least on some of them. "Some of these papers, notably the *Ṣūr-i Isrāfīl*, the *Ḥabl al-Matīn* and the *Musāwāt*, he says (*op. cit*., p. 127), were of a very high order, and afford examples of a prose style, forcible, nervous and concise, hitherto almost unknown"; and again (p. 243): "it (the Persian press) reached in many cases a high level of excellence, most remarkable when we remember how new journalism was to Persia".

IV. INDIA.

The history of the Muḥammadan press in British India still remains to be written. Materials are available for such a history in various official publications of the Government of India, and (for the Hindustani press particularly) in the writings of Garcin de Tassy. The most important of these journals were published in the Urdu language, this being the language most commonly read by Musulmans throughout India; but many of them have been short-lived and have had only a small circulation. One of the oldest, still in existence, is the *'Alīgarh Institute Gazette*, which was founded by Sir Saiyid Aḥmad Khān in 1866, as a weekly journal; up to the time of his death in 1898, this eminent leader of Muḥammadan thought in India continued to contribute to it weighty articles on politics, social reform and education, especially in connection with the 'Alīgarh College. Two other weekly journals are influential exponents of Muslim sentiments, *Waṭan*, published in Lahore (circulation, 1800 copies) by *Mawlawī* Inshā' Allāh, who has distinguished himself by his advocacy of friendly relations between England and Turkey and his support of the Ḥidjāz Railway (for which he has collected more than £ 5000), and *al-Bashīr*, published in Etāwah (circulation, 1050 copies) by Mawlawī Bashīr al-Dīn, a zealous supporter of all distinctively Muḥammadan movements. Another weekly journal, *Zamīndār*, has recently been started by a clever young journalist, Ẓafar 'Alī Khān. Both *Waṭan* and *Zamīndār* have a daily edition, but neither of these has so large a circulation as *Paisā Akhbār* (daily, 1011 copies, weekly edition, 8377 copies), published in Lahore by an energetic and experienced journalist, Munshī Maḥbūb 'Ālam, whose enterprise and wide interests have given birth to a large number of publications. Other weekly journals are *Naiyar-i-A'ẓam*, printed in Murādābād, *Mashriḳ*, in Gorakhpūr, and *Dhu 'l-Ḳarnain*, in Badā'ūn. It is impossible to mention here all the Urdu journals published in Northern India, where this language is the spoken as well as the literary dialect of the Muḥammadan population, or to give a list of those published in other parts of India, where the commonly spoken language is not Urdu, e. g. in Ḥaidarābād there are 7 Urdu newspapers, in Madras 8, in the Central Provinces 3 and in Bombay 2, most of them having a restricted circulation; in Calcutta, *Dār al-Salṭanat* has a weekly issue of 400 copies, and in Arrah, *Star of India* 657 copies.

Though most literate Muhammadans in India read Urdu, it is naturally to be expected that they should publish journals in such other languages as happen in various provinces to be their mother-tongue. The most important of these are the following: in Gudjarātī, *Akhbār-i-Islām* (daily, Bombay, 1000 copies) and *Political Bhomiyo* (weekly, Aḥmadābād, 1500 copies); in Marāṭhī, *Pilārī* (thrice in a month, Kārwār (Kānara), 450 copies); in Sindī, *Āftāb-i-Sind*, (weekly, Sakkur, 500 copies) and *al-Ḥaḳḳ* (weekly, Sukkur, 1400 copies); in Tamil, *Līwā al-Islām* (weekly, Madras, 650 copies) and *Muḥammadiyamitran* (weekly, North Arcot, 400 copies); and in Malayalam, *Malabar Islām* (weekly, Cochin State, 600 copies) and *Muḥammadiya Darpanam* (monthly, Travancore State, 1000 copies).

During the last 20 years, several attempts have been made to establish an English newspaper devoted exclusively to Muḥammadan interests, it being recognised that while there were a number of excellent English journals financed and edited by Hindus, there was no first class English newspaper under Muḥammadan control. The heavy cost of production and the comparatively small number of English-reading Muḥammadans have hitherto stood in the way of the success of such an enterprise. The most important of these English journals now in existence are *The Panjab Observer* (Lahore), *The Moslem Chronicle* and *The Comrade* (Calcutta), and *The Muhammadan* (Madras).

The most important Persian journal published in India is *Ḥabl al-Matīn* (weekly, 1000 copies, Calcutta). Several shortlived attempts have been made to start journals in Arabic, (generally, with a translation in Urdu), e.g. *Al-Riyāḍ* (Lucknow), but the support they receive is too meagre for such enterprises to be remunerative.

In addition to the newspapers, there are several other periodical publications, chiefly in Urdu, which are deserving of mention. The most noteworthy of these is *Tahdhīb al-Akhlāḳ*, founded by Sir Saiyid Aḥmad Khān in 1870 and issued weekly until 1876, when the founding of the 'Alīgarh College absorbed his time and attention; five years later it was revived for the space of $2^1/_2$ years; in 1894 a new series was started, which lasted for 3 years only. The *Tahdhīb al-Akhlāḳ* was the organ for the liberal school of Muslim theology, of which Sir Saiyid Aḥmad Khān was the founder; the greater part of the articles were from his pen and aimed at expounding a purer form of Muslim doctrine, purged from the accretions of theologians and mediaeval views of life and nature that were inconsistent with modern science. Among periodicals upholding the older orthodoxy may be mentioned *Ishā'at al-Sunnah*, (which was started especially to combat the views expressed in *Tahdhīb al-Akhlāḳ*), and *Nūr al-Āfāḳ* and *Nūr al-Anwār*, printed in Cawnpore, and *Ahl-i-Ḥadīth*, printed in Amritsar. *Al-Nadwah*, a monthly journal, with a circulation of 625 copies, is published in Lucknow, as the organ of the *Nadwat al-'Ulamā'*, an association which aims at grafting modern learning on to the old traditional methods of study, without any violent breach with the past. All these religious periodicals are written in Urdu; the organ of the Aḥmadiyah sect [*q.v.*], however, *The Review of Religions* (monthly, 800 copies, Ḳādiān), is in English.

In recent years, some Urdu magazines have been started, on the model of European magazines, dealing mainly with literary and other topics of a non-controversial character; from the very nature of their subject-matter they are not exclusively Muhammadan, but mention may be made of *Ṣalā-i-'Āmm* (printed in Dihlī), *Makhzan* (monthly, 4000 copies, Dihlī) and *The Aligarh Monthly* (500 copies), as being specially concerned with matters of interest to Muḥammadans. Two magazines for Muḥammadan women are printed in Urdu, *Tahdhīb al-niswān* (weekly, 240 copies, Lahore) and *Khātūn* (monthly, 450 copies, 'Alīgarh).

V. The Dutch East Indies and Singapore.

The newspapers etc. appearing in the Dutch East Indies are detailed in the *Regeeringsalmanak voor Nederlandsch Indië*.

Some notes are given in the *Revue du Monde Musulm.*, particularly vii. 485 *et seq.* Through the kindness of Prof. C. Snouck Hurgronje we are enabled to give some further details of the Muḥammadan press there. The *Medan Prijaji*, "The Arena of Native Officials" is published daily in Bandung; its chief editor is Radèn Mas Tirthadisurya. To some extent in opposition to this there has also been published in Bandung since 1912 a second daily, *Kaoemmoeda* "Young People" (to be understood in the same sense as one speaks of Young Turks) edited by A. H. Wignja di Sastra. The *Darmakanda* which appears twice a week in Surakarta is edited by a Chinese The Tjie Tjay with the assistance of a Javanese. The name is taken from the Sanskrit and means *Good News*. A classical name is likewise borne by the newspaper *Sarotomo* (Good Arrow) published in Solo, which is edited by the *Sarikat Islam* to oppose the propaganda of the *Budi Utāmā* (= Noble Endeavour, cf. *Revue du Monde Musulm.*, vii. 415 and elsewhere). The best edited paper next to the *Darmakanda* is the bi-weekly *Utusan Melayu* (The Malay Messenger) which has appeared in Padang since 1910 under the editorship of Datu Sutan Maharadja and Sutan Mohamad Salim. The *al-Munīr* is also published in Padang.

At Singapore there appear from time to time Arabic newspapers with a more or less pronounced hostile attitude to European authorities. The *Revue du Monde Musulm.*, ii. 398 *et seq.* gave an account of the Malay monthly *al-Imām*. The aims of the *Neratja*, the 'Balance', which first appeared in 1912, are similar. Other Malay papers are the *Utusan Melayu* (thrice weekly) published by the Singapore Free Press (Walter Makepeace); *Tamang Pengtahuan* etc. Of the Arabic newspapers referred to above, we know of the following: *al-Eslah* (*al-Iṣlāḥ*) 1909 (weekly), *al-Waṭan* 1910 (fortnightly), *al-Ḥusām*, 1910, (weekly).

VI. China.

I have before me two productions of the Muslim press of China: a newspaper and a periodical. But I was assured by a Confucian Chinaman acquainted with these matters that this paper was certainly not the only one. The newspaper is the *Ching Tsung Ai Kuo Pao* "The Muḥammadan Newspaper "Patriotism"", published in Pekin. It belongs to the *hsiao pao* or the "minor press", which is distinguished by format as well as by contents from the larger papers. This paper, which only displays its Muḥammadan character in a few features, is said to be very popular among the non-Muslims in Pekin also: it is the only paper that appears in *su hua* "the vernacular"; it is therefore understood by the lower classes when it is read out to them. The *Ai Kuo Pao* is a single sheet. Each side contains four pages the horizontal and vertical divisions between them being also closely filled with printed matter. We may deduce from the numbering that it has been appearing for six years. The number which I have before me of the 21st March 1912 contains a leading article amongst other items in addition to the news of the day, entitled "a proposal, to diminish the troubles in the Republic" by Chu Yüan as well as a political caricature.

Broomhall gives an account of the periodical in his *Islam in China* (London 1910), p. 283 with a facsimile of the cover of N°. 1 (fig. 282-

283) and an index of the contents of the same number (p. 284). The cover bears at the top the Muḥammadan title *Istiḳāẓ al-Islām*, "The Awakening of Islām", with the confession of faith below it. In the centre is the Chinese title *Hsing Hui Pien*, which is the equivalent of the Arabic; below "Nº. 1"; left: Organ of the Muḥammadan Society for the advancement of education in Japan (according to Broomhall *op. cit.*, the publishers are thirty students; they are probably also the leading members of this society); on the right "not for sale". The contents are classed under three heads: 1. Articles which, as is clear from the contrast to 2, are composed by Chinese Muslims, living in Japan. 2. Articles from home contributors. 3. Appendix with miscellaneous information.

The ten articles in section 1. are: 1. "The relation between religion and education" by Huang Chên-pan; 2. "The reform of religion" by Pan T'in-liang; 3. "Exhortation on the responsibility of the education of our members", by the same author as 2; 4. "On the Muḥammadans" by the same author as 1; 5. "The civilisation of Islām" by the same author as 1; 6. "Islām and *Wu shi tao*" (The Japanese *bushido*) by Wang T'in-chih; 7. "On the progress of religion" by Ma Tsung-rui; 9. "On the education of the masses on Islām in China" by the same author as 8; 10. "The New Muḥammadanism" by a member of the society. — The second group contains five articles. 1. Introductory address to the Japanese Society for the Advancement of Islām, by Tsai Ta-yu; 2. A plan for the revival of Islām by Li Shun-Shan; 3. On the affairs of the Society, by T'ung-chung; 4. An essay on *Ai* (education? prayer?) by the same author as 3; 5. The characteristics of the sects by Ha Li-t'ang. — The third group contains three anonymous notes: 1. The position of the society for the advancement of Islām in Eastern Asia. 2. 3. 4. Minutes, statutes and list of members of the Chinese Society for the advancement of Islām.

While the Christians in Turkey have no press in the language of the ruling race (exception see p. 1031[b]), because their masters themselves are only in the initial stages of the higher developments of the intellectual life, the Muslims of China have assimilated themselves to the ancient culture of the Chinese and their press also will thus share the great advance which has been made by the newspaper press of the new China. It will render vast services to the country, if it continues to avoid the main danger that threatens Islām under foreign rule, namely the tendency to try to form a state within the state. (MARTIN HARTMANN.)

Special attention is given to the Islamic Press by the *Zeitschr. der Deutschen Gesellschaft für Islamkunde*, which has appeared since the end of 1912.

DJARĪR B. 'AṬIYA B. AL-KHAṬAFĀ of the clan of Banū Kulaib b. Yarbū', a branch of the Mudarite Tamīm, the greatest Arab satirist of the Umaiyad period, first became prominent as a poet in the reign of the Caliph Mu'āwiya. After he had proved his satiric powers on stars of lesser magnitude, a dispute between his kinsmen the Banū Dhuhail, a branch of the Banū Yarbū' and the Madjāshi' who were also of Tamīm, brought him into hostile contact with their poetic champion al-Farazdaḳ (q. v.). The feud with al-Farazdaḳ, which was to dominate the whole of Djarīr's future career, appears to have begun in the year 64 (683-684). In Baṣra where the battle was first waged, such stormy scenes arose that the authorities had to intervene — without any lasting effect, it must be acknowledged. The governorship of al-Ḥadjdjādj in the 'Irāḳ proved an important factor in determining Djarīr's later career, for he introduced him to the court of the Caliph 'Abd al-Malik. Rivalry for the favour of the ruler brought Djarīr into poetic conflict with the Taghlibī al-Akhṭal [q. v., p. 234] and 'Adī b. al-Riḳā' [q. v., p. 137] of Damascus who had been successful in throwing his rivals into the shade, particularly in the reign of al-Walīd. Djarīr enjoyed the full favour of the Caliph under the pious 'Omar II. to which his fits of religious fervour and the modesty for which he was famous probably contributed their share. We find poems in his *Dīwān* on the later Caliphs Yazīd II. and Hishām also. Djarīr appears to have died in Yamāma (in 110 = 728-729, or according to others 114 = 732-733) soon after his great rival al-Farazdaḳ.

In his poems Djarīr appears as a thorough Beduin. In spite of his inherent lack of reverence for his father, his pride in his ancestors demanded the preservation of the honour of his house even at the expense of truth. He believed he was defending the honour of himself and his tribe in his 'flyting'. Nevertheless Djarīr did not live by his lampoons, as others did, but by his panegyrics on those in authority. In addition to these classes of poetry, there are also beautiful laments among his poems.

His 'flyting' with al-Farazdaḳ is to be found in the *Naḳā'iḍ* published by Bevan (1905—1909), the lampoons which he exchanged with al-Akhṭal are collected in the 'Umūmiya Ms., Nº. 5471 in Constantinople. His *Dīwān* was printed in Cairo in 1313; numerous poems by him are also given in the *Kitāb al-Aghānī*.

Bibliography: Yāḳūt (ed. Wüstenfeld), s. v. *Uthaithiya*; Wüstenfeld, *Geneal. Tabellen*, see Index, s. v. *Garîr*; Ibn Ḳotaiba, *Kitāb al-Shi'r* (ed. de Goeje), pp. 283—289; Brockelmann, *Gesch. der Arab. Litter.*, i. 56—58 *et seq.*; A. Schaade, *Djarîr*.

DJĀRIYA (A.) "girl", "female slave", cf. the article 'ABD [p. 16 *et seq.*].

DJARR (A.), technical term of Arabic grammar of the Baṣra school = genitive (Kūfic *Khafḍ*). *Djarr* (properly the infinitive of *djarra*, to pull, to draw) is still used by Sībawaihi as a synonym for *kasr(a)* and denotes the vowel *i* in the last syllable of a word when it serves to express the genitive. How *djarr* came to have this meaning is not quite obvious (cf. the articles ḤARAKA and Iʿ'RĀB). It is for example explained that the later grammarians no longer understood the phonetic meaning of the expression and came to use *djarr* as well as its Kufic equivalent *khafḍ* as the regular words for "genitive", without regard to the form of the ending; cf. for example *al-Ṣanhādjī* in the *Ādjurrūmīya* (in Brünnow, *Chrestomathie*, 1st ed., p. 140), where three distinguishing features of the *khafḍ* are given: the *kasra*, the *yā'* and the *fatḥa*.

According to Zamakhsharī's *Mufaṣṣal* and his commentator Ibn Yaʿīsh, the *djarr* is one of the *khawāṣṣ al-ism* (characteristics of the noun) as it is not found in the verb nor in the particles. Like the two other cases, it is an *ʿalam ʿalā maʿnā*, a sign for something referred to, the expression of a so-called *iḍāfa* [q. v.]. These *iḍāfa* however only make the *djarr* necessary (i. e. in order to avoid a confusion of the possessor with the subject *fāʿil* or object *mafʿūl*); it is produced by the *ḥarf al-djarr*, i. e. the preposition which happens to govern the *djarr*. Such a preposition is added even when a genitive is dependent on another substantive, "because both substantives have equal power and one cannot govern the other", we would therefore have to look upon *ghulām^u Zaid^in* as an abbreviation of *ghulām^un li-Zaid^in*, *khātam^u ḥadīd^in* as an abbreviation from *khātam^un min ḥadīd^in*. On the fallacy of this conception cf. Fleischer, *Kleinere Schriften*, ii. 89.

(A. SCHAADE).

DJĀSAK (DJĀSEK or DJĀSHAK), an island in the Persian Gulf. It is only mentioned by Yāḳūt and Ḳazwīnī among Arab geographers. From their statements it should most probably be identified with the island of Lārek in the strait S. E. of Bender-ʿAbbās [q. v., p. 694], and not with the large island of Kishm as is done by Le Strange. In the time of these two authors, Djāsak belonged to the prince of Kīs (Kīsh, the modern Ḳais, a small island in 54° E. Long. Greenw.); he kept a small body of men there as a garrison, who were distinguished for their skill at sea. At the present day the name Djask (Djāsak) is borne by a cape (in 24° 40′ N. Lat.) on the Gulf of ʿOmān, near the entrance to the Persian Gulf, with a fishing-village of about 200 huts. This point, the strategic importance of which is not inconsiderable, is now an English possession (a warship and telegraph-station).

(M. STRECK.)

DJASSAWR. [See DJESSORE.]

DJĀṬ or DJAṬ, the name of a tribe in N. W. India, of uncertain origin and of mixed character. Historically, they rose to prominence on the downfall of the Mughal empire in the eighteenth century, when their chieftains founded the Hindu states of Bharatpūr and Dhōlpūr near Agra, while somewhat later they formed the military portion of the Sikh confederacy. In these tracts they are still the most valued members both of the agricultural community and of the native army; but in so far as they practise widow marriage, they rank below the Rādjpūts. In the W. and S. of the Pandjāb, as in Sind and even in Balōčistān, the name is given to Musalmans, presumably converted from Hinduism, who do not belong to any recognised Musalman tribe, and who are often graziers by occupation. The language called Djaṭkī is only a local dialect. At the Census of 1901, the total number of Djāṭs was seven millions, mostly in the Pandjāb, of whom nearly 48% were Hindus, 20% Sikhs, and 32% Musalmans.

(J. S. COTTON.)

DJATĀ, DJETĀ, a name given to the Mongols [q. v.].

AL-**DJĀTHIYA** (A.) "the kneeling (community)", a title of Sūra xlv.

DJĀWA, Arabic name of the island of Java [q. v.]; in the modern use of the term, this name also includes all the peoples of Malay race. Cf. Snouck Hurgronje, *Mekka*, ii. 295 *et seq.*

AL-**DJAWĀD AL-IṢFAHĀNĪ**, ABŪ DJAʿFAR MUḤAMMAD B. ʿALĪ, with the honorary title DJAMĀL AL-DĪN, a Zangid Vizier, had received an excellent education from his father and at once received an office in the Dīwān al-ʿArḍ of the Saldjūḳ Sulṭān Maḥmūd. He afterwards became one of Zangī's most trusted friends and was given by him the governorship of Naṣībīn and al-Raḳḳa and the supervision of his whole kingdom. After the assassination of Zangī he narrowly escaped sharing his master's fate but succeeded in leading the troops to al-Mawṣil. Saif al-Dīn Ghāzī, son of Zangī, thereupon confirmed him in his rank; during this period Djamāl al-Dīn distinguished himself so much by his liberality, that he became universally known as *al-Djawād* (the generous). He particularly won the praise of his co-religionists by the many useful and charitable institutions in the two holy cities, Mecca and Medīna, which he founded at his own expense. He was nevertheless thrown into prison in al-Mawṣil in 558 (1163) by Ḳuṭb al-Dīn Mawdūd, who had succeeded his brother and died in the following year in prison. His body was afterwards brought to Mecca, carried round all the holy places, then taken to Medīna where it was buried. Among his panegyrists were Ḥaiṣa-Baiṣa and ʿImād al-Dīn.

DJAWĀD PASHA, Turkish general and author. Djawād Pasha to whom his father Muṣṭafā ʿĀṣimbeg gave the name Aḥmad Djawād, was born in 1267 (1851) at Damascus, educated in Brusa and at the military academy of Constantinople. His military career brought him back to his native city of Damascus, and then to Servia (1876); he particularly earned the gratitude of his country at the demarcation of the frontier with Servia, Russia and Greece. In 1885 he was promoted to be general of a division and sent to Crete, where he was afterwards appointed governor; he ultimately reached the rank of Mushīr and became Grand Vizier in 1897. Two years later he resigned office, became commander-in-chief of the Fifth Army Corps in Damascus and died in 1318 (1900). In addition to minor writings he composed a work on the history of Turkish warfare (*Taʾrīkh-i ʿAskarī-yi ʿOthmānī*), of which only the first volume, containing the history of the Janissaries, was printed (Stambul 1297—1299). A French translation was made by G. Macridès (*État militaire Ottoman, depuis la fondation de l'Empire jusqu'à nos jours.* I. *Le Corps des Janissaires, depuis sa création jusqu'à sa suppression*, Paris 1882).

AL-**DJAWĀLĪḲĪ**, ABŪ MANṢŪR MAWHŪB B. AḤMAD B. MUḤAMMAD B. AL-KHIḌR, an Arab philologist of an old Baghdād family, pupil and successor of al-Tibrīzī [q. v.] in his chair of Philology at the Niẓāmiya, born 466 = 1073, died on the 15th Muḥarram 539 = 19th July 1144 at Baghdād. In addition to a short handbook of Syntax, a commentary on Ibn Ḳutaiba's *Adab al-Kātib*, an extract from Djawharī's *Ṣaḥāḥ* and a *Kitāb Asmāʾ Khail al-ʿArab wa Fursānihā* (cf. Aumer, *Die arab. Hdss. der k. Hof- und Staatsbibliothek in München*, Nº. 103, 2; H. Derenbourg, *Les manuscrits arabes de l'Escurial*, Nº. 270, 5) he wrote an explanation of the words of foreign origin in Arabic, entitled *Kitāb al-Muʿarrab min al-Kalām al-Aʿdjamī ʿalā Ḥurūf al-Muʿdjam*, ed. by E. Sachau (Leipzig 1867); a lacuna has been filled up from the Cairo Ms. Spitta in *Zeitschr. d. Deutsch. Morg. Ges.*, xxxiii. 208 *et seq.*; marginal glosses by ʿAbd Allāh b. Barrī (died 582 = 1186) in a ms. of the Esc. (Derenbourg, *op. cit.*, 772, 5). Finally he wrote a supplement to *Durrat al-Ghawwāṣ* entitled *Kitāb al-Takmila fī mā yalḥanu fīhi l-ʿĀmma* (*le livre des locutions vicieuses*), ed. H. Derenbourg in *Morgenländ. Forsch.*, Leipzig 1875, p. 107—166.

Bibliography: Ibn Khallikān, *Wafayāt al-Aʿyān* (ed. DJAWĀN, the poetical name of KĀẒIM ʿALĪ, a native of Dihlī. He was sent to Calcutta from Lucknow by Colonel Scott in A. D. 1800, and obtained employment as a munshī at the College of Fort William. He there made a Hindustani translation, in A. H. 1215 (A. D. 1801) of the Sanskrit drama Sakuntalā of Kālidāsa from a Brajbhāshā version by Nawāz Kavīśvar, which was made by order of Mūlā Khān, the son of Fidāʾ Khān, one of the generals of the emperor Farrukhsiyar (who reigned A. D. 1713—1719). A portion of this Hindustani translation was first printed, in Devanāgarī characters, in 1802, in Dr. Gilchrist's "Hindee Manual". It was next printed in Roman characters, (Calcutta, 1804), after which an edition of the text in Hindustani, together with a transliteration by Dr. Gilchrist, was published, with a selection of fables, in London, 1826, under the title of "An Appendix to the English and Hindostanee Dialogues". It also appeared (without the author's preface) in Price's "Hindee and Hindoostanee Selections", Calcutta, 1830. A lithographed edition was published at the Newal Kishor Press, Lucknow, in 1875.

Kāẓim ʿAlī is also the author of a Bārahmāsa, or Mathnawī poem descriptive of each month of the year, which was printed at Calcutta in A. D. 1812. The date of his death is uncertain, but in the *Dīwān-i Djahān*, a Tadhkira of Urdu poets written by Bēnī Narāyan in A. H. 1227 (A. D. 1812) he is mentioned as being then still alive.

(J. F. BLUMHARDT.)

AL-**DJAWBARĪ**, ʿABD AL-RAḤMĀN B. ʿOMAR ZAIN AL-DĪN AL-DIMASHḲĪ, an Arab author, with a thorough scientific training, who led the life of a wandering scholar through all the lands of Islām even to India, going to Ḥarrān in 613 = 1216, Ḳōniya in 616 = 1219 and then to the court of al-Malik al-Masʿūd of the house of Urtuḳ, the ruler of Āmid and Ḥiṣn Kaifā who had succeeded to power in 618 = 1221 or 619 = 1222. For the latter he wrote an account and exposition of all the frauds and deceptions he had become acquainted with on his travels among strolling people, quacks, alchemists, and money changers, and this is a mine of information on the manners of the period. This *Kitāb al-Mukhtār fī Kashf al-Asrār wa Hatk al-Astār* was printed at Damascus in 1885, Stambul n. d., Cairo 1316, ibid. n. d., (ca. 1908) together with his *Kitāb al-Ḥalal fi 'l-Alāḥ al-Simāwiya wa baʿḍ Fawāʾid ṣanʿīya mudjarraba*.

AL-**DJAWF** (AL-DJŌF), a district in South Arabia between Nadjrān and Ḥaḍramawt. According to the information obtained by Niebuhr during his stay in Yaman, it is for the most part,

flat and desert; many camels and horses are reared in it and are also exported. The soil is in many places also suitable for agriculture. The inhabitants are warlike Bedouins, who wear iron helmets and cuirasses. The chief place in Djawf is Ma'rib, which is governed by its own Sharif, while the villages and the desert are governed by an independent Shaikh.

Al-Djawf is first mentioned by Hamdānī in his *Djazīra*. He describes it as a vast plain, through which flow several wādīs of considerable size, such as the W. al-Khārid, W. Khabash, W. Nadjrān. Of villages he mentions Ard al-Karm, Hubāsha, Rakhamāt, al-Sahl', Shawāba, Sawlān, al-'Abila, al-Ka', Hirrān, etc.; of hills: Warwar and Nihm. He does not include Ma'rib in al-Djawf. He says the inhabitants are the Hamdān and Madhhidj, who are at enmity with one another, whence the names Djawf Hamdān and Djawf Murād (b. Madhhidj) in the geographers.

Bibliography: Hamdānī, *Djazīra* (ed. D. H. Müller), p. 27, 7, 81, 19—84, 93, 15, 108, 22, 110, 1—8, 125, 3, 135, 22, 167, 9—22, 183, 24, 200, 14, 22 and Index s. v.; Yākūt, *Mu'djam* (ed. (J. Schleifer.)

DJAWF AL-SIRḤĀN, an Arab district in the north of Nadjd towards Syria, on the Wādī Sirḥān, the largest oasis in North Arabia next to Taimā. The most important town in Djawf al-Sirḥān was *Dūmat al-Djandal* (the Δουμαίθα of Ptolemy) with the fortress of Mārid. This place which is said to be called after a son of Ishmael is known to us from the history of Muḥammad. When the Prophet was advancing against Tabūk in the year 9 = 630, he sent his general Khālid b. al-Walīd to Dūmat al-Djandal, which was then under the rule of the Christian prince Ukaidir of the house of Kinda. Ukaidir submitted and adopted Islām, from which he became an apostate however on the death of the Prophet. After the battle of Ṣiffīn (in 37 = 657) Dūmat al-Djandal (according to another account Adhroḥ [q. v., p. 135]) was chosen as the meeting place between 'Alī and Mu'āwiya. It has now sunk to be an insignificant little village.

Djawf al-Sirḥān was visited by Burckhardt in 1812 and about seventy years later by J. Euting. It now consists of a group of large villages surrounded by gardens and palm-trees, called Sūks (markets), with 80—120 houses and a total population of about 12,000. The individual villages are each governed by their own Shaikh. The inhabitants at the time of Burckhardt's stay there were for the most part petty traders and artisans (cobblers, smiths, and carpenters). They exchanged their wares to the Arabs for camels. In recent times both trade and industry have utterly declined. They used to belong to the Wahhābī sect and their territory formed one of the seven provinces of the Wahhābī kingdom, which had two rulers among them. After the collapse of the Wahhābī kingdom they were for long independent. In 1855 they became subject to the Shammari of Ḥāyel.

The geographers mention others in addition to the two Djawf above mentioned; one is said to be on the coast between Mecca and Medina.

Euting, *Tagebuch einer Reise in Inner-Arabien*, i. 123—140.

(J. Schleifer.)

DJAWHAR (A.) "substance". The notion of substance is not so prominent in Oriental scholasticism as it was among the schoolmen of the west. The Muslim thinkers, following the Greek conception, regarded substance as that which exists by itself, which logically at least requires nothing else for its existence; it is opposed to the accident which is always in something other than itself; thus for example the body logically exists before the colour; it is considered a substance with regard to it and the colour with regard to the body is considered an accident. But the interest of the idea of substance is not only logical; it is also metaphysical. It is not sufficient merely to know in what order the elements rely on one another or which are dependent on the others; it is also necessary to investigate what there is which is solid and durable as the basis. This kind of permanent basis of things is substance in the metaphysical sense.

It should be noted that in this latter sense, Muslim thinkers have been especially preoccupied with the search for the "simple substance", that which, having no component parts, is therefore incorruptible. Thus Avicenna, in order to demonstrate the immortality of the soul, first of all proves that it is a "simple substance"; he then deduces immediately from this that it cannot perish. Interest in this conception was excited less by the idea of substance than by that of "simplicity".

According to the author of the *Ta'rīfāt*, there are five kinds of substances at bottom of all realities: primal matter, form, body, soul and intelligence. Primal matter is the substance which is capable of continuity or discontinuity and receives corporeal and specific forms. Corporeal form is that which is at once apprehended by the senses. Body [*djism*, q. v.] is the substance which assumes the three dimensions, or extended substance. Soul or animal spirit is a subtle substance which supports the vital forces, capability of sensation, and liberty of movement; it is attached to the body. Intelligence or reasoning soul is a substance purified of matter and linked up with the body which it governs. These definitions represent the point of view of philosophers.

The Mutakallim theologians have another theory, which is an interesting application of the theory of simple substance. They are for the most part atomists; to them simple substance is merely the atom and even the soul, which is simple substance, is regarded as a kind of atom, a true monad. Knowledge abides in the indivisible atom.

The Imāms Fakhr al-Dīn Rāzī and al-Ghazālī did not take up the question of atomism; but Nasafī, the compiler of the *'Aḳā'id* (articles of faith) and Taftazānī, his commentator, are atomists. "The world" says Nasafī, "with all its parts is produced; it is composed of substances (which he calls *a'yān*) and of accidents. The substances are what exists by their own essence (logically); they are either composite like the body or not

composite like substance (*djawhar*), that is the indivisible component (atom)". Taftazānī points out that there is an advantage from the apologetic point of view in admitting the doctrine of atomism for it can be used to refute the thesis of those philosophers who say the world is composed of primal matter and of form, a thesis which leads to that of the eternity of the world and the denial of the resurrection. Matter must be eternal for, according to this system, all that is produced is produced in a matter that precedes it; and as the eternity of matter implies that of form, from which it cannot be separated, the eternity of body results. The philosophers further admit that circular movement, which is that of the heavenly bodies, is eternal while rectilinear movement cannot be so. But when it is admitted that all bodies, including the celestial spheres, are composed of atoms, circular movements are made up of small rectilinear displacements of atoms, which are not eternal.

Muslim theology does not apply the name "substance" (*djawhar*) to God; the atomic theologians do not do so, since for them this word is specially used to designate the atom, which is in space and forms part of bodies. The philosophers in the strict sense of the word, when they speak of what does not exist in another thing already posited, or of what subsists logically by itself, speak of a "quiddity", of a certain well defined accident, which is independent of its existence; this accident may exist or not exist; in other words the substances of things are contingent quiddities. This is not the case with God in whom existence is identical with being.

According to Ash'arī, the substances of things are created by God from instant to instant and from their very nature do not endure; if God ceased to maintain them for an instant, they would be annihilated together with their accidents.

Bibliography: Djurdjānī, *Ta'rīfāt* (Cairo, 1283, A. H., or ed. Flügel, Leipzig, 1845); Nesefī, *'Aḳā'id*, with Taftazānī's commentary (Constantinople, 1313 A. H.), pages 47, 52, 70.

(B. Carra de Vaux.)

DJAWHAR, whose full name was Abu 'l-Ḥasan (Ḥusain) Djawhar b. 'Abdallāh, called al-Kātib, a Fāṭimid general. He was born in Byzantine territory whence his name "al-Rūmī" and was brought as a slave to Ḳairawān. After passing through the hands of several masters he was finally presented by the eunuch Khafīf to the Caliph al-Manṣūr in this town, who made him his personal attendant. After receiving his freedom from his son and successor al-Mu'izz, he soon rose from secretary to the rank of a vizier and commander-in-chief of the army, and in this latter office distinguished himself as one of the greatest of Fāṭimid generals. His first great feat of arms was the campaign in 347 (958) to the Maghrib; he succeeded in taking prisoner the ruler of Sidjilmāsa, Muḥammad b. Wāsūl, who had declared himself "Commander of the Faithful", and struck coins in his own name; Fās was taken and the whole west as far as Tangier and Ceuta soon subdued. Djawhar's second campaign which took place about nine years later was equally brilliant. It was now at last possible to realise the long cherished designs of the Fāṭimids on Egypt, which had been breaking up since the death of Kāfūr. On the 14th Rabī' I. 358 = 5th February 969 Djawhar left Raḳḳāda with 100,000 men. Near Alexandria he was met by an embassy from Egypt which offered him the submission of the country. Although he gave the mission a friendly welcome, on its return the war-party gained the upper hand with the result that a battle was fought on the 11th Sha'bān (30th June) at Djīza. Djawhar had little difficulty in breaking down the resistance of the enemy and on the 17th Sha'bān victoriously entered the capital. He at once proceeded to lay out a new quarter of the city, the modern Cairo (cf. the articles Azhar, p. 532 *et seq.* and Cairo, p. 815 *et seq.*). — He intrusted the conquest of Syria to Dja'far b. Fallāḥ, who occupied Damascus in 359 = 969-970. By 360 = 971 however the latter had to retire before the Ḳarmaṭians under Ḥasan al-A'ṣam; the reinforcements sent by Djawhar to Syria were besieged in Jaffa and soon the enemy was before Cairo itself. Djawhar tried, not without success, to enter into negotiations with some of the hostile leaders, and after an indecisive battle had first been fought, won a complete victory on the 3rd Rabī' I 361 = 24th December 971 before the gates of the city. Jaffa was now relieved but when soon afterwards the Ḳarmaṭians began to prepare for another advance, Djawhar urgently requested the Caliph to come to Egypt in person. He arrived in Ramaḍān 362 (June 973) and from this hour the hitherto all-powerful Djawhar begins to recede into the background; in 364 = 974 he was even deprived of all his honours. It looks as if the Caliph thought the great popularity of his general dangerous. It was only after the death of Mu'izz (356 = 976), in the reign of his successor al-'Azīz [q. v., p. 540] that he regained his former rank. This Caliph in 976 sent him against the Turk Aftakīn, who had shortly before installed himself as ruler of Damascus. In Dhu 'l-Ḳa'da 365 = July 976, Djawhar began the siege of the city but when Ḥasan al-A'ṣam hurried to its assistance, had to retire and in his turn was shut up in Ascalon by the allies. He finally succeeded in gaining from Aftakīn a guarantee of a safe retreat, whereupon he went to the Caliph in Egypt, who now undertook the direction of the operations in person. Djawhar commanded the advance-guard in the successful campaign against Aftakīn which followed, but we hear no more of his military activities. He appears to have passed the remainder of his life in comparative retirement, winning the esteem of the people by his liberality, and died on the 20th Dhu 'l-Ḳa'da 381 = 28th January 992 at an advanced age.

(E. Graefe.)

al-**DJAWHARĪ**, Abū Naṣr Ismā'īl (b. Naṣr?) b. Ḥammād, a celebrated lexicographer of Turkish origin born in the province or town of Fārāb, east of the Sir-Daryā, which in the time of Abu 'l-Fidā' and Yāḳūt was called the Otrar or Oṭrār.

After being educated at home by his maternal uncle, Abū Ibrāhīm Isḥāḳ al-Fārābī, author of the *Dīwān al-Adab*, he went to Baghdād, where he attended the lectures of Abū Saʿīd al-Ḥasan b. ʿAbd Allāh b. al-Marzubān al-Sīrāfī and Abū ʿAlī al-Ḥasan b. Aḥmad b. ʿAbd al-Ghaffār al-Fārisī. To obtain a deeper knowledge of Arabic, he travelled in Mesopotamia, Syria and even to the Ḥidjāz, while he devoted particular attention to the dialect of the Rabīʿa and Muḍar. He then returned to the east, spent some time in Damaghān (or Dāmaghān) a small town on the road from al-Raiy (near Teheran) to Nīsābūr, with Abū ʿAlī al-Ḥasan b. ʿAlī, who studied the *Ṣiḥāḥ* with him. He then continued his journey eastwards but again broke it in the capital of Khorāsān where he taught the Arabic language, grammar and particularly calligraphy in which he is said to have so excelled that his writing could not be told from that of the celebrated Ibn Muḳla. A manuscript of the Ḳorʾān from his pen cost a hundred dinārs. He died in Nīsābūr; it is said that in a fit of madness he tried to fly with the two wings of a door and fell from the top of his house (according to others from that of the old mosque) while trying to do so.

The date of his death is variously given as 393 (1003), 398 (1007-1008), and about 400 (1009-1010). The first date is untenable; for Yāḳūt says that he had seen a copy of the Ṣiḥāḥ from al-Djawharī's pen which bore the date 396; on the other hand this testimony loses its importance when we read that al-Djawharī died when he had only got to the letter *Ḍād* in the fair copy, and the rest of the work was finished by one of his pupils from the author's rough draft, either by Ibrāhīm b. Sahl (variant: Ṣāliḥ) al-Warrāḳ or by the *Ustādh* Abū Manṣūr ʿAbd al-Raḥīm (variant: Raḥmān) b. Muḥammad al-Baikaḥī, for whom it is said to have been compiled.

Among his pupils are mentioned Ismāʿīl b. Muḥammad b. ʿAbdūs al-Dahhān al-Nīsābūrī, Abū Sahl Muḥammad b. ʿAlī b. Muḥammad al-Harawī etc.

Al-Djawharī had also some taste for poetry; al-Thaʿālibī and Yāḳūt quote some verses by him.

He wrote the following works: 1. a small grammar, *Muḳaddima*, which appears to be lost; 2. *ʿArūḍ al-Waraḳa*, a treatise on metre, in which he did not follow the plan of al-Khalīl b. Aḥmad al-Farāhīdī; this work is known only from extracts in writers on metrics; 3. *Tādj al-Lugha wa-Ṣiḥāḥ al-ʿArabiya* (*Ṣaḥāḥ* is also correct), a large dictionary. The various roots are arranged alphabetically under the last radical, those roots which end in the same radical being arranged according to the first and second radical. In spite of small errors the *Ṣiḥāḥ* is considered more correct than the *Ḳāmūs* of Fīrūzābādī; it was published in Tabrīz in 1270 (lithographed with vowels), in Būlāḳ in 1282 and in 1292 according to the recension of Ismāʿīl b. Muḥammad b. ʿAbdūs al-Dahhān al-Nīsābūrī with the *al-Wiḳāḥ wa-Taḳḳīf al-Rimāḥ fī Radd Tawhim al-Ṣiḥāḥ* of ʿAbd al-Raḥmān b. ʿAbd al-ʿAzīz on the margin.

(MOH. BEN CHENEB.)

AL-DJAWLĀN, a district in the north of the country east of the Jordan. The modern Djōlān is bounded in the west by the Jordan, in the north by the slopes of Hermon, in the east by the Nahr al-Ruḳḳād and the Nahr al-ʿAllān and in the south by the Yarmūk. It is divided into a high lying northern part and a lower southern part. The north is wild and covered with shapeless blocks of lava; its former wealth of forest, particularly oak-trees, has now practically disappeared, but it is covered with a rank growth of grass after the rainy seasons. The southern part is flatter and more fertile for, like the greater part of Ḥawrān, it is covered with decomposed, dark brown lava.

The name of the district points to the Gaulanitis of Hellenistic times, which also though only in part extended to the Jordan (Josephus, *Bell. Jud.* iii. 3, 1). The name was derived from the town of Golan mentioned in the Old Testament which Josephus and Eusebius still knew as a village of Gaulane or Gaulon in Batanaea. If this town can, as Schumacher supposes, be identified with the modern Saḥm al-Djōlān, the district of Gaulanitis must originally have had its centre east of the Nahr ʿAllān, and the name was afterwards transferred to the districts west of this river. It is in any case certain that the district of Golan in later times also must have included land east of the modern eastern boundary. The town of al-Djābiya [q. v. p. 988] is, for example, called Djābiyat al-Djawlān by Ḥassān b. Thābit and other early poets (e. g. *Ḥamāsa*, 658, v. 2); this is also obvious from the above-mentioned Saḥm al-Djōlān, even if Schumacher's suggestion should be wrong. Yāḳūt is the first to call the district Djaidūr, in which Djābiya lies, and to mention it as a separate district alongside of Djawlān, although with the note that some consider the two identical. This agrees with the modern division, which separates the land east of the Nahr al-Ruḳḳād from Djōlān as an independent district Djēdūr.

When the Arabs conquered Syria, Gaulanitis belonged to Palestina Secunda and the towns attached to it are therefore detailed in the account of Shuraḥbīl's conquest of al-Urdunn. It had been an important Ghassānid centre as long as this principality existed (cf. Nābigha, 2, 4; 21, 25; 29, Ḥassān b. Thābit, Tunis, 89, 91, 100; Cairo, 99, 102, 110 *et seq.*). But the Arabs here abandoned the old division and united Djawlān to the province of Damascus. It is therefore mentioned by Ṭabarī (*Annales*, iii. 84), with al-Ghūṭa and Ḥawrān along with al-Urdunn and in Muḳaddasī, it forms with al-Ghūṭa, Ḥawrān, al-Bathaniya [q. v., p. 674], al-Biḳāʿ [q. v., p. 775], and al-Ḥūla the

six districts of the province of Damascus. According to Ya'ḳūbī Bāniyās [q. v., p. 648] was the capital of Djawlān and the main element in the essentially Ḳaisite population the Banū Murra. At the present day, Djōlān is one of the six administrative divisions belonging to the mutaṣarrifik of Ḥawrān, the Ḳāimmaḳām of which lives in Ḳunēṭra.

Damascus used to be supplied with provisions from this very fertile district. An Arab poet (*Ḥamāsa*, 763, v. 1) also mentions that the clay of Djawlān was used for making bricks.

(FR. BUHL.)

DJAWNPŪR is a district and city lying on the Gumti river to the North West of Benares in the United Provinces of India, between 25.24—26.12 degrees North and 82.7—83.5 degrees East. The population amounts to a million and a quarter, of which Muḥammadans form $9^{8}/_{4}$. After Shihāb al-Dīn Ghūrī defeated the Rāṭhōr King of Kanaudj, the Muḥammadans passed through Djawnpūr to the sack of Benares. Ghiyāth al-Dīn Taghlaḳ made his son Governor of the country in 1321 A. D., and 38 years later the Emperor Fīrōz Shāh Taghlaḳ founded the modern city. Thirty five years later again Khwādja-i Djahān, the Mughal Governor, proclaimed himself Sulṭān al-Shark, and his successors ruled in Djawnpūr for nearly a century. The principal of these were Mubārak Shāh, Ibrāhīm Shāh (1401—1440), Maḥmūd Shāh (1440—1459), and Ḥusain Shāh (1460—1476), who were engaged from time to time in struggles with the central power at Dihlī, and the rulers of Mālwa, and made successful raids into Bundelkhand and Orissa. The Emperor Humāyūn took possession of the place after the capture of Āgra by Bābur, and it was subsequently held by Shēr Shāh. In 1559 A. D. after the succession of Akbar, it was re-united to the Mughal Empire and fell into decay when Allāhābād became the seat of provincial government. It afterwards came into the possession of the Nawwābs of Oudh and passed to the British in 1775 A. D. Among the striking architectural features of Djawnpūr are the stone bridge over the Gumti built by Mun'im Khān, Governor of the Emperor Akbar, in 1564 A. D., the Atala and Djhandjhrī mosques built by Ibrāhīm Shāh and the Dārība mosque built by two of his nobles; the Lāl Darwāza mosque built by the Queen of Maḥmūd Shāh; and the Djāmi' Masdjid built between the years 1438 and 1478. At the side of the last is an enclosure of royal graves. The special characteristics of the Sharḳī style, derived from the Paṭhān style at Dihlī, are the high platforms on which the buildings stand, the two-storeyed colonnade cloisters which flank the great central court, and the lofty propylon-like gates on the east side, raised in front of a domed porch, and relieved by panels, cornices and other decorative work.

(H. C. FANSHAWE.)

DJAWZAHAR, in the astronomy of the Arabs and Persians means without annexion (*iḍāfa*), the orbit of the moon, or to be more exact the circle concentric with the ecliptic, in which the centre of gravity of the lunar epicycle moves; with annexion it means the lunar nodes, i. e. the points at which the orbit of the moon cuts that of the sun (ecliptic), and the node from which the moon begins its course north of the ecliptic, is called *Ra's al-Djawzahar* = the Dragon's Head, the node from which the moon begins its orbit south of the ecliptic, *Dhanab al-Djawzahar* = the Dragon's Tail; the two together are called *Djawzaharāni*. Djawzahar is the arabicised form of the Persian word *Gawazhr*, of uncertain etymology; I shall only mention two derivations: According to Spiegel and Nallino Gawazhr is probably from the Zend *Gaocithra* = "(containing) the seed of the bull", which in the Avesta is an epithet of the moon; the *Dictionary of Technical Terms* and the *Mafātīḥ al-'Ulūm* say that Djawzahar is an arabicised form of the Persian *Gawzihr*, i. e. form or shape of a knot (literally of a knob or nut). For farther information the reader may be referred to the bibliography. In most Arabic astronomers the term *al-'Uḳdatāni* is also found = the two nodes or also *ra's al-tinnīn* and *dhanab al-tinnīn* = head and tail of the snake or of the dragon.

Sprenger) s. v. *Djawzahar* and *Dhanab*; *Tabulae long. ac latit. stellar. fixar. ex observat. Ulugh Beighi* (ed. Th. Hyde, Oxon. 1665), p. 14 of the commentary; F. Spiegel, *Eranische Altertumskunde* (Leipzig, 1871—1878), ii. 70.

(H. SUTER.)

DJAZĪRA (plural DJAZĀ'IR) (A.) "island", "peninsula". — Al-Djazīra al-Khaḍrā', a town in Spain, see ALGECIRAS, p. 277. — Al-Djazā'ir = Algiers [q. v., p. 256].

Djazīrat Aḳūr or Iḳlīm Aḳūr, also briefly called al-Djazīra, is the name given by the Arab geographers to the northern part of the land between the Euphrates and the Tigris, beginning, according to Abu 'l-Fidā (ed. Reinaud, p. 273) at Malaṭya and Āmid in the north and bounded in the south from the 'Irāḳ by a line from Anbār to Takrīt. Cf. G. Le Strange, *Lands of the Eastern Caliphate* (Cambridge 1905), p. 24 *et seq.*, 86—114.

DJAZĪRAT B. 'OMAR, now usually briefly called Djezīre, "island", a town on the right (west) bank of the central course of the Tigris, situated in 42° 11' E. Long. (Greenw.) and 37° 20' N. Lat. at a height of 1200 feet above sea level. According to the Arab geographers it used to lie in a bend in the Tigris the ends of which were joined by an artificial channel. If we take this literally, the modern river-bed must be the artificial arm and the Tigris once flowed around the town on the west in the bed which is now almost dry in the normal condition of the river.

Even in ancient times there was a passage over the Tigris at Djazīrat b. 'Omar, at the for-

treas of Bezabde, the exact site of which has been located by M. Hartmann, (*Bohtān*, p. 98 *et seq.*) from Sachau's description of the district, south of the modern town west of the ruins of the ancient Tigris bridge, while the site of the district of Zabdicene — whether east or west of the river (in favour of the former it might be pointed out that the Chaldaean diocese of Djezīre lies to the east) — is still debated. The traditional equation of Bezabde with Sapphe should be rejected as quite uncertain. On this point cf. Nöldeke in *Beiträge zur alten Geschichte* (*Festschrift für Kiepert*), p. 76 *et seq.*; Chapot, *La frontière de l'Euphrate*, p. 319; Herzfeld in *Memnon*, i. 225; M. Streck in Pauly-Wissowa's *Realencykl.*, Supplement, p. 250.

The district of Bāzabdā is often mentioned by the Arab geographers. It was conquered by ʿIyāḍ b. Ghanm in the reign of ʿOmar. We know less of the town of the same name. The mass of ruins of a bridge south of Djazīrat b. ʿOmar across the Tigris naturally points to a time when the main settlement lay close by. According to the usual supposition the bridge would be Sasanian. If the building of a bridge, which is mentioned in the viᵗʰ (xiiᵗʰ) century by Ibn al-Athīr (xi. 204), himself a native of Djazīrat b. ʿOmar, refers to this, it must really have been a restoration. Ibn al-Athīr (in Yāḳūt, iv. 36) still knew of Bāzabdā as a village to the west across the river from Djezīre.

The Arab authors say that a certain al-Hasan b. ʿOmar b. Khaṭṭāb al-Taghlibī, who died about 250 A. H., was the founder and eponym of Djazīrat b. ʿOmar. The most flourishing period in the history of the town was in the ivᵗʰ (xᵗʰ) century, Muḳaddasī (p. 139) describes it as a well built and populous town surrounded by a fertile country, the harbour of Armenia, from which the Tigris boats exported honey, butter and nuts, almonds, pistachios, etc. to Mosul. In the vᵗʰ (xiᵗʰ) century it belonged to the Marwānids [q. v.] and afterwards to the Zangids [q. v.]. At a later period we find a Kurdish dynasty, the ʿAzīzān, as rulers of Djazīra, who claimed descent from an alleged Umaiyad Khālid b. al-Walīd, although it was well known that they used to be Yazīdīs. (Cf. M. Hartmann, *op. cit.*, p. 19). By the xivᵗʰ century, Ibn Baṭṭūṭa (ii. 139) found the greater part of the town in ruins. Tīmūr again destroyed it. The old dynasty gained its power again after being driven out for a period by Uzun Ḥasan and finally submitted to the Ottomān Sulṭān Selīm I for protection from the Ṣafawids. The Kurds, who by this time had already become practically uncontrolled lords of the country, have remained so under Turkish rule. Even when in the xixᵗʰ century the government took more energetic steps and the town was stormed and laid in ruins in 1836, everything was soon as before. In 1899 Lehman-Haupt (*Armenien*, i. 363 *et seq.*) found the Kurdish Ḥamīdiye the real masters there.

The modern town of Djezīre (according to Sachau 600—800 houses; according to Müller-Simonis 800 houses, of which 120 are Christian; according to Cuinet 9560 inhabitants, including 5100 Christians; — according to Sachau the most widely disseminated language is Kurdish) which is the capital of a Ḳaḍā in the Sandjaḳ of Mārdīn in the Wilāyet of Diyār Bakr, occupies only a small part of the area surrounded by basalt walls which the ancient town filled, while part of the ruined remainder is used as a cemetery. In the tortuous streets a few old churches and a considerable mosque have survived. Of the fortress at the northern corner a few apartments are still occupied; the rest has fallen into ruins. The mediaeval bridge, which united the island in the south with the country on the west of the Tigris was — in a wretched state of disrepair — in use down to recent times but has now been utterly abandoned to decay. At the north side near the fortress there is a bridge of boats which renders communication possible with the east bank.

Bibliography: The Arabic geographers have been utilised by G. L. Strange in his *Lands of the Eastern Caliphate*, p. 93 *et seq.*, 124 *et seq.*, and M. Hartmann, *Bohtān*, p. 19 *et seq.*, 33 *et seq.*, 98 *et seq.*, where the other early literature is also utilised; see also Barb in the *Sitzungsber. der Wiener Akad.*, xxviii. (1858), p. 5 *et seq.*; xxx. (1859), p. 117—140; Petermann, *Reisen im Orient*, ii. 45 *et seq.*; Müller-Simonis, *L'Arménie*, p. 358—368; Cuinet, *La Turquie d'Asie*, ii. 512 *et seq.*; G. L. Bell, *Amurath to Amurath*, p. 296 *et seq.*; Preusser, *Nordmesopotamische Baudenkmäler*, p. 24 *et seq.* (R. HARTMANN.)

DJAZM (A.; literally "cutting"), a technical term of Arabic grammar: apocope. It is the name given to one of the three moods of the imperfect (*wudjūh min wudjūh iʿrāb al-mudāriʿ*), viz., to the one, whose forms without an inflectional ending end in a consonant in a strong verb and in a short vowel in a weak verb (*yafʿal*: *yafʿalu*; *yagzu*: *yagzū*). The *djazm* (in the strong verb at least) corresponds in form to the *sukūn* (which Sībawaihi also calls *waḳf*) at the end of indeclinable words; according to the Arab view it also corresponds to the *djarr* [q. v.] of the noun (just as the indicative corresponds to the nominative and the subjunctive to the accusative). As it is only found in the verb, it belongs to the *Khaṣāʾiṣ al-Fiʿl*. The djazm is found after certain particles and nouns (see *Mufaṣṣal*, p. 112, 2). — The elision of short and abbreviation of long vowels at the end of the apocopated mood are presumably to be explained from the sentence stress.

AL-**DJAZŪLĪ**, ABŪ MŪSĀ ʿĪSĀ B. ʿABD AL-ʿAZĪZ B. YALALBAKHT B. ʿĪSĀ B. YŪMARĪLĪ, belonging to the Berber tribe of Djazūla (not Djuzūla, as Ibn Khallikān says) or better Gazūla (the modern Gazūla) a branch of the Yazdakts in Southern Morocco is best known by his short introduction (*Muḳaddima*) to the study of Arabic grammar, called *al-Ḳānūn*.

After the completion of his early education in Marrākush he went to the east to make the pilgrimage to Mecca and Medina. In Cairo he attended the lectures of the celebrated philologist Abū Muḥammad ʿAbd Allāh b. Barrī and it is even said that his *Ḳānūn* is merely a reproduction of the lectures of his teacher on al-Zadjdjā-

ūlī's *Djumal* and in support of this is quoted Djazūlī's confession that he was not the author of it. He also studied the *Ṣaḥīḥ* of Bukhārī, with Abū Muḥammad Ibn ʿUbaid Allāh in Cairo, but lived in the greatest poverty and often had to perform the duties of an Imām in a mosque in the neighbourhood in order to earn the money to provide him with the means of subsistence to complete his studies, for he would not enter a madrasa.

On his return from the east, he stayed for a while at Bougie which he devoted to the teaching of grammar, always in the direst poverty.

In 543 (1148-1149) he was in Algiers where he initiated Abū ʿAbd Allāh b. Muḥammad b. Ḳāsim b. Mandās, a grammarian of Āshīr, into his *Ḳanūn*. He then went to Almeria in Spain and taught grammar for a period there. While here he pledged his copy of Ibn al-Sarrādj's *Uṣūl*, which he was studying with Ibn Barrī and which bore his autograph. The man with whom he had pledged it told Abu ʾl-ʿAbbās al-Maghribī, at that time the most famous ascetic in that part of the world, of Djazūlī's wretched position and Abu ʾl-ʿAbbās used his influence with the Almohad Sulṭān on his behalf. The latter appointed Djazūlī to deliver the *khuṭba* in the Great Mosque of Marrākush. He died in Azammūr in 606 or 607 or 610 or even 616 according to Ibn Ḳunfudh, *Wafayāt*.

Of his pupils we must mention Zain al-Dīn Abu ʾl-Husain Yaḥyā b. ʿAbd al-Muʿṭī (or briefly b. Muʿṭī) b. ʿAbd al-Raḥmān al-Zawāwī, the first grammarian to compose an *Alfiya*, and Abū ʿAlī ʿOmar b. Muḥammad b. ʿOmar b. ʿAbd Allāh al-Azdī al-Shalūbīnī, who wrote commentaries on his master's *Ḳanūn*, of which there are copies in the Escurial (Derenbourg's *Catalogue*, Nº. 2, 36, 190).

Among Djazūlī's works are: 1. a Commentary on the *Bānat Suʿād* of Kaʿb b. Zuhair (edited by R. Basset, Algiers, 1910); 2º. *Al-Ḳanūn*, also called *al-Muḳaddima al-Djazūliya*; 3º. Commentary on the preceding; 4º. *Amālī fi ʾl-naḥw* (grammatical dicta); 5º. Abridgment of the Commentary of Abu ʾl-Fatḥ ʿOthmān b. Djinnī on the Dīwān of al-Motanabbī; 6º. Commentary on the *Uṣūl* of Ibn al-Sarrādj (grammar).

(MOH. BEN CHENEB.)

AL-DJAZŪLĪ, ABŪ ʿABD ALLĀH MUḤAMMAD B. SULAIMĀN B. ABĪ BAKR AL-DJAZŪLĪ (Gazūlī) AL-SIMLĀLĪ, a Moorish mystic, was descended, according to his biographers and brothers of his order, like all founders of religious orders, from the Prophet, although the very name of his father is uncertain and still more that of his grandfather. He belonged to the Berber tribe of Gazūla, which was settled in the Moroccan Sūs, in the district between the Atlantic Ocean, the Saharan Atlas and the lower course of the Wād Drā (Darʿa).

He began his studies in his native place, and then went to Fās to enter the *Madrasat al-Ṣaffārīn*, where the room in which he lived is still pointed out. Soon after his return home a tribal feud, in which he had intervened forced him to migrate to northern Morocco. When after a desperate battle each of the combatants denied being guilty of the death of a man who had fallen in the fight and the struggle threatened to be resumed, Djazūlī suddenly appeared on the battlefield and seeing that the situation was becoming worse cried out that he himself had killed the man. As the customary law of the time demanded the banishment of the slayer, Djazūlī went to Ṭandja to take ship to the East, and spent forty (?) years in Mecca and Medina and in Jerusalem. Returning to Fās he compiled his *Dalāʾil al-Khairāt* with the help of the books in the *al-Ḳarawiyīn* Library. He was then initiated into the Shādhiliya order by the Sharīf (?) Abū ʿAbd Allāh Muḥammad b. Āmghār, the younger, who lived in Tīṭanfaṭṭar (the modern Tīṭ) on the Atlantic coast, a few miles S. E. of Mazagan. After devoting fourteen years of peaceful seclusion in a *Khalwa* to the worship of God, he went to Asfī (Safī) where he soon made so many proselytes that the governor of the town felt obliged to expel him. Djazūlī thereupon called down God's wrath upon the town, whereupon it fell into the hands of the Portuguese who held it for forty years. According to one tradition this governor poisoned Djazūlī whom he thought to be the expected Fāṭimid prophet (the Mahdī). Djazūlī died at Afūghal while engaged in prayer, on a Wednesday (sic!) in Dhu ʾl-Ḳaʿda 869, on the 16th Rabīʿ I. 870, in 873, or on the 16th Rabīʿ I. 875 (25th June—24th July 1465; 7th November 1465; 2nd August 1467—21th July 1468; 13th September 1470).

One of his pupils, ʿAmr b. Sulaimān al-Shayāẓmī, called al-Saiyāf, who afterwards proclaimed himself a prophet, resolved to avenge Djazūlī. After placing his body in a coffin, he unfurled the banner of revolt and for twenty years ravaged the province of Sūs with fire and sword. He carried the coffin with the body of his teacher about with him and brought it every evening to a place which he called *al-Ribāṭ*, which was guarded by a body of watchers and lit all night by a wick as large as a man's body, placed in a kind of vessel full of oil. When ʿAmr al-Saiyāf met his death in 890 (18th Jan. 1485—6th Jan. 1486), Djazūlī was buried in the district of Ḥāḥa at a place called Āfghāl or Āfūghāl. 77 years afterwards Sulṭān Abu ʾl-ʿAbbās Aḥmad, called al-Aʿradj, after his entry into Marrākush, had his remains exhumed along with those of the father of the Sulṭān, who rested beside him, perhaps for political reasons, brought the two coffins to Marrākush and finally interred them there.

It almost seems as if the Shaikh's body was still uncorrupted after the first exhumation, so we may presume that death had taken place only a short time before.

Apart from his extensive knowledge of Ṣūfī doctrines, Djazūlī was also an important jurist and actually knew by heart the *Mudawwana* and *al-Mukhtaṣar al-farʿī* of Ibn al-Ḥādjib.

Of his Ṣūfī works only the following are known: 1. *Dalāʾil al-Khairāt wa Shawāriḳ al-Anwār fī*

Dhikr al-Ṣalāt ʿalā ʾl-Nabī al-Mukhtār, a collection of prayers for the Prophet, description of his tomb, his names, etc. published several times at Cairo and Constantinople, and at St. Petersburg 1842; 2. *Ḥizb al-Falāḥ*, a prayer extant in Ms. at Berlin 3886, Gotha 820, Leiden 2200[2], and 3. *Ḥizb al-Djazūlī* also called *Ḥizb Subḥān al-Dāʾim lā yazūl*, which is found among the Shādhilites, is in the vulgar tongue.

Djazūlī was the founder of a Shādhilī sect known as the Djazūliya, whose adherents have to repeat the *Basmala* 14,000 times and the *Dalāʾil al-Khairāt* twice a day and in the night once the *Dalāʾil* and the fourth part the Ḳorʾān.

DJAZZĀR-PASHA, AḤMED, Pasha of ʿAkkā, a Bosnian by birth, although he is said to have belonged to Widdin or Nish, born about 1132 = 1720, was first of all in the service of the Grand Vizier Ḥakīm-Oghlu ʿAlī-Pasha, whom he accompanied to Egypt, when the latter was entrusted with its administration for the second time; he then made the pilgrimage to Mecca. When on his return he found ʿAlī-Pasha, who had in the meanwhile been dismissed, no longer there, he enlisted in the Mamlūks by selling himself to ʿAbd Allāh-Beg, one of ʿAlī-Beg's Mamlūks (1168 = 1755). When *Kāshif* of the province of Buḥaira [q. v., p. 772] he was entrusted with the punishment of the Beduins who had murdered ʿAbd Allāh-Beg and revenged the latter by massacring over seventy Arabs, a deed which earned him the epithet of *Djazzār* ("Butcher"). Suspected of complicity in the murder of Ṣāliḥ-Beg he escaped, disguised as an Algerian, to European Turkey but soon afterwards returned to marry the daughter of a Beduin chief of Buḥaira of the tribe of Hannādī. In Syria he made an independent position for himself with the help of a body of soldiers which he formed by purchasing slaves and in 1181 (1767) received the rank of *Mīr-Mīrān* and in 1189 (1775) was made Beylerbeg of Rūmili; in the same year as a reward for his services to the Porte in the affair of Ḍāhir (Ṭāhir) ʿOmar, he was appointed governor of the Eyālet of Ṣaidā. He made use of this position to fortify ʿAkkā [q. v., p. 241] and make it his residence; he was on several occasions Wālī of Syria and leader of the pilgrims' caravan.

Defeated in 1213 = 1799 by Bonaparte he retired to ʿAkkā which he defended with the help of the English fleet under the command of Sir Sidney Smith, who provided him with engineers, gunners and ammunition. The siege began on the 21st March and ended after repeated fruitless assaults on the 20th May. Djazzār on his side had made an unsuccessful sortie on the 4th April to facilitate the operations of the Turkish army. He had a monopoly of the trade in corn and cotton; with the vast sums obtained by his extortions he built three splendid monuments of architecture in his capital, a mosque, a well and a market. Regarded by the Porte as a rebel, he was saved from the punishment threatening him by the rising of the Wahhābīs. He once again became Wālī of Syria and commander-in-chief in Ḥidjāz, but an illness prevented him from further carrying out his plans; he died in 1219 = 1804 at the age of 70.

DJEBEDJI, "rifle-makers", a division of troops who had charge of weapons and munitions and their transport; when instituted by Sulṭān Muḥammad II the corps consisted of 700 men; under Murād III it was raised to 7300. It was composed of two divisions, *Bölük* and *Djamāʿat*, each of which contained a certain number of *orṭas*. One body of the Djebedji was quartered in Constantinople in fine barracks near the Ayā Ṣōfia and in a Kiosk near the Top-Khāne. The remainder were stationed at the frontier fortresses where they were usually called *ʿAzab*. Their general was called *Djebedji-Bashi*. They were disbanded at the same time as the Janissaries (1241 = 1826).

DJEBEL, DJABAL (A.) "hill".

DJEBEL ṬĀRIḲ. [See GIBRALTAR.]

DJELLĀB, or, according to the dialect, DJELLĀBA or DJELLĀBIYA, "an outer garment used in certain parts of the Maghrib, which is very wide and loose with a hood and two armlets. The *Djellāb* is made of a quadrangular piece of cloth, which is much longer than it is broad. By sewing together the two short ends a wide cylinder is formed. Its upper opening is also sewn up except for a piece in the centre where a hole is required for the head and neck. Holes are cut on each side for the arms. When the garment is put on, the seam joining the two short ends runs down the middle of the breast. The two seams which close the two ends of the upper part run along the shoulders and the upper part of the arms. The head and neck are put through the space left open in the middle of the upper end. The forearms come through the holes at each side; they would be left uncovered if armlets were not sewn on to the edges of the armholes. These armlets are very short. At their lower extremity is a slit (*nifek*) for the elbow and at the top a second slit (*fatha*) across, through which, when necessary (e. g. for the ritual ablution) the bare fore-arm can be thrust. The *djellāb* is made either of native cloth or (in prosperous towns) of European. The former is woollen, rarely and only quite recently of cotton or cotton and wool. These cloths are dyed in different colours in different districts; red, brown, black, white, of uniform colour, striped or spotted. The European materials are thick, usually navy blue, black or dark grey. — The *djellāb* of native manufacture consists of a single piece of cloth, which is made

of the required size. The hood is not added but consists of a quadrangular piece of cloth woven on, the sides of which are folded together behind and sewed. In the *djellāb* of European cloth, the hood is cut separately and put on. The seams of the *djellāb* are covered with braid and often ornamented with tassels, knots and rosettes. — The cut, the form of the *djellāb* and the hood, the ornamentation, the style of weaving, of sewing and of lining vary much in different districts. — This garment is called *djellāb* (*djellāba*, *djellābiya*), throughout the greater part of Morocco and in the West of Algeria; it is also used in other parts of the Maghrib, e. g. in the South of Algeria and in the Mzāb but it is given another name there. Among the Andalusian Muslims however the word *djellābiya* was the name of a garment, the shape and use of which we do not know; in Egypt, we find a phonetic equivalent of the word, *gellābiya* (with *g* for *dj*), but the garment it denotes is quite different from the *djellāb* of the Maghrib. The origin of the word is uncertain. Dozy considers the form *djellābiya* to be the original one and *djellāb*, *djellāba* to be corruptions. He therefore gives the original meaning as "garment of a *djellāb*, i. e. a slave dealer". This view seems philologically untenable. It is much more probable that *djellāb* is connected with the Old Arabic *djilbāb* "outer garment". The dissimilative dropping of the *b* in this word of foreign origin (cf. Nöldeke, *Neue Beiträge zur semitischen Sprachwissenschaft*, p. 53) is not surprising; moreover it has also taken place outside the Maghrib in the modern forms of the word *djilbāb*: thus for example in the dialect of ʿOmān we find *gillāb* with the meaning of "veil".

DJEM, son of Sulṭān Meḥemmed II, was born on the 27th Ṣafar 864 = 22nd December 1459 in Adrianople (Saʿd al-Dīn, i. 471; ʿAlī in Ismāʿīl Beligh, *Güldesti*, 47); according to eastern sources (Thuasne, 2), his mother was a Servian princess. While not yet ten years old, he was appointed governor of Kastamuni in Radjab 873 = January 1469 (Saʿd al-Dīn, i. 515) and in the middle of Shaʿbān 879 = end of 1476 succeeded his deceased brother Muṣṭafā as governor of Karaman with a residence in Ḳōniya; in Ḳōniya he devoted himself to athletic exercises and translated Salmān's poem *Djemshīd u Khurshīd* from the Persian (Saʿd al-Dīn, i. 516). During this period he conducted the negotiations with the Grand Master of Rhodes, which preceded the unsuccessful blockade of the island by Meḥemmed II in 1480 (Thuasne, 12—17).

Meḥemmed II died on the 3rd May 1481; of his two surviving sons, Bāyazīd II was in Amasia; on the 20th May 1481 he seized the capital and the reins of government. Djem who intended to dispute the throne with his brother only got as far as Brusa, which he took after a brief fight. Here in the old capital of the Ottomans, he had the *khuṭba* read in his name and struck coins (Neshrī, *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xv. 376; cf. the coin described by Ghālib Edhem, Nº. 126). But in 18 days he had to vacate Brusa before Bāyazīd's army and on the 26th Rabīʿ II. 886 = 23rd June 1481 was severely defeated at Yenishehr (according to Ḥādjdjī Khalīfa at Sulṭān Önü); his army of Anatolian ʿAzabs, Karamanians and Turkomans of Varsak was scattered; he himself escaped with great difficulty to Ḳōniya, from which he fled to the Cilician highlands, which within the Egyptian sphere of influence, on the 1st Djumādā I. = 28th June with his mother, his harem and his son. Thence he went by land via Aleppo, Damascus and Jerusalem to Cairo, which he reached at the end of September and was kindly received by the Mamlūk Sulṭān Ḳāitbāy. From Egypt Djem made the pilgrimage (December 1481—March 1482); on his return to Cairo, he entered into negotiations with Bāyazīd to obtain a share of the kingdom; but Bāyazīd would only promise him a suitable allowance (Ferīdūn). At the same time the Karaman-Oghlu Ḳāsimbeg and others of his supporters urged him to return to Anatolia and once more try the fortune of war. In consequence of this, Djem left Cairo at the end of March, assembled his adherents in Aleppo in the beginning of May, and set out from Adana, where he joined forces with Ḳāsimbeg, to invade Ottoman territory. This undertaking which was entered into without sufficient forces and was badly managed proved an utter failure. Although at first Bāyazīd's generals had to retreat and some towns like Eregli and Angora fell into the hands of Djem's troops, he could not take Ḳōniya, which was defended, and when Bāyazīd advanced with his army (in the middle of June) Djem fled to Tasheli, inaccessible among the Cilician mountains, without a great battle being fought at all. Bāyazīd once more offered to make peace with him, and promised him a princely appanage if he would retire to Jerusalem and do nothing against his authority; but Djem proudly and stubbornly insisted on a division of the empire. When he could no longer hold out, he disbanded his army, took a ship at Korykos and went via Anamur to Rhodes, to the Grand Master Pierre d'Aubusson, after receiving an assurance of protection and guarantee of the personal liberty of himself and his followers. He arrived at Rhodes on the 29th July; soon afterwards the negotiations between the Grand Master and the Sulṭān were begun which in the course of the next month led to the conclusion of a peace, by which the Sulṭān agreed to pay 45,000 ducats annually to the Knights of St. John, in return for which the latter undertook the maintenance and supervision of Djem. In the interval, on the 11th Sept. 1482, d'Aubusson had sent the prince to France, to intern him in one of the houses of the order there. On the 16th October Djem landed at Villafranca and first of all spent some months at Nice; from there he was taken, always guarded by the knights, to Chambéry, Rumilly, Pouët, Rochechinard, Sassenage, Bourganeuf, Monteil le Vicomte, Morterolles (Limoges), Boislamy (May 1485) and then back to Bourganeuf (1487), where he remained till the end of 1488.

When Djem made the fateful resolve to go into Christendom, he did it, as his Turkish biographer Saʿd al-Dīn tells us, with the intention of invading

Rumelia from Hungary and there resuming the war with Bāyazīd. As soon as he reached France, he actually attempted to make an alliance with Matthias Corvinus; but his ambassadors were thrown into prison and made away with. For his protectors and warders regarded him solely as a means to an end and had no intention of allowing him any freedom of movement, by which they might lose this valuable hostage and object of ransom. The rulers, threatened by the Ottomans — Matthias Corvinus, Ferdinand of Aragon, king of Naples, the Pope and the Mamlūk Sulṭān, — repeatedly endeavoured to get Djem handed over to them by the King of France and the Knights of St. John in order to be able to use him as a means of bringing pressure to bear on Bāyazīd II. Charles VIII finally decided, by arrangement with Pierre d'Aubusson, to hand Djem over to Pope Innocent VIII who was planning a crusade against the Turks. On the 21st February 1489 Djem sailed from Toulon and made his state entry into Rome on the 10th March, where he was henceforth maintained in honourable custody partly at the Vatican and partly at St. Angelo.

No sooner did Djem become a ward of the Pope than the latter was approached by the above-mentioned rulers to hand him over to them; on the other hand Bāyazīd, who was disquieted by his brother's change of abode, sent Muṣṭafābeg to the Pope in 1490 to make some arrangement with him; two years later a second envoy was sent with presents and Djem's allowance, which was now paid to the Pope at the same rate as previously to the Grand Master. Under Alexander VI (Rodrigo Borgia), the successor of Innocent VIII, who died on the 26th July 1492, Djem's lot seemed to have improved; he continued to be an object of the liveliest interest to all the powers interested in the East. At the end of 1494, Charles VIII of France undertook his campaign against Naples and persuaded the Pope to hand Djem over to him. The latter left the Vatican to take part in the campaign against Naples but fell ill soon after and died in Naples on the 25th February 1495. Alexander VI was suspected of having poisoned him (Sa'd al-Dīn, ii. 38, tells the story of how a barber, hired by the Pope, caused Djem's death with a poisoned razor; a similar story is given by Ewliyā, *Travels*, i. 1, p. 42; at great length by Kantemir, 179 *et seq.*, and *Ḥadīḳat al-Djewāmi'*, i. 165. The two latter sources say that a renegade named Muṣṭafā — afterwards known as Ḳodja Muṣṭafā Pasha — disguised as a barber and commissioned by the Sulṭān did the deed and was rewarded by the Sulṭān with titles and offices; this tale may be traced to Muṣṭafābeg's mission to the Pope in 1490). Charles VIII had the body embalmed and sent to Gaëta where it remained guarded by Djem's Turkish retinue; thence it was brought to Castello dell' Ovo. It was not till four years later and only after repeated requests on Bāyazīd II's part to have the body handed over to him, that Djem's remains were finally sent to the Sulṭān by the King of Naples; they were buried in Brusa.

Oghuz Khān, one of Djem's sons, was in the Old Serai at the time of the accession of Bāyazīd II and the latter had him strangled (Leuncl., *Hist. Mus.*, 625); a second son, Murād, lived at a later period in Rhodes, became a Christian and on the conquest of the island in 1522 fell into the hands of Sulaimān I who had him and his sons executed. One of Djem's daughters, who had remained in Egypt, was delivered up after his death to Bāyazīd in 909 and married by him in the same year (= 1503-1504) to the son of Sinān Pasha (Sa'd al-Dīn, ii. 127 *et seq.*, cf. v. Hammer, *Gesch. d. Osm. Reichs*, ii. 313, 332). We know nothing of the fate of his mother, to whom he was deeply attached and with whom he corresponded from his exile.

Djem's attractive personality, his detention in the land of the Franks and his tragic end quite early appealed to the imagination of historians and writers of romance both in east and west. V. Hammer in his *Geschichte des Osmanischen Reiches*, ii. was the first to give a critical account of Djem's life, based on Sa'd al-Dīn's detailed and accurate statements; we now have the authoritative monograph by L. Thuasne, *Djem-Sultan* (Paris, 1892). His collected poems exist in manuscript in Berlin and Munich (cf. Laṭīfī, *Tezkere*, 64 *et seq.*; v. Hammer, *Osm. Dichtkunst*, i. 145; Gibb, *History of Ottoman Poetry*, ii. 70—92); Ferīdūn gives specimens of his letters to his brother (*Münsha'āt Salāṭīn*, I), cf. also the manuscript in the Vienna Hofbibliothek, N°. 313; the authenticity of the correspondence with his wife Sewired, given by J. B. de Rocoles, *La vie du Sultan Gemes* (Leiden 1683) has still to be investigated; cf. also Gregorovius, *Rome in the Middle Ages* (transl. Hamilton), Vol. vii. 305—309, etc.

(J. H. Mordtmann.)

DJENDERELI. (See Čendereli, p. 833 b. f.).

DJENNE, a town in the French Sūdān, 200 miles S. W. of Timbuktu and 100 N. E. of Segu Sikoro, in Lat. 13° 35' N. and Long 9° E. (of Greenw.). From the name Djenne, pronounced Djinni or Ginni, is probably derived the name Guinea given by the Portuguese in the xvith century to West Africa. The first European to reach Djenne was the Frenchman René Caillié (11th March 1828).

Djenne lies at some distance from the left bank of the Bani, a tributary of the Niger on a rocky plateau in the midst of a wide plain which is covered with water in the rainy season. This remarkable feature of Djenne was noted by Leo Africanus. "During three months of the year (in July, August and September) this town is like an island; for at this season the Niger overflows its banks just as the Nile does" (Leo Africanus, Bk. vii.; ed. by Schefer, Vol. iii. 288). Djenne is further separated from the adjoining country at this season by a girdle of swamps, a circumstance which has very frequently enabled the inhabitants to ward off hostile attacks. The town which is surrounded by a wall of unbaked bricks with 14 gates, is about 1000 yards long and 700 broad. It has 6000 inhabitants (Bozo, Bambara and Fulbe), some of whom wrongly claim to be of Arab descent. The language most commonly used is a dialect of Bozo; Songhai though known to many people is only used for trading purposes.

Djenne was for long of great economic importance. In the xviith century the author of the *Ta'rīkh al-Sūdān* wrote: "It is one of the great Muslim markets. In it the salt-traders from the mines of Taghāza (2 days' journey north of Taodeni) and the gold-traders from the mines of Biṭu (according to Binger = Bukuku) meet. . . . It is on account of this favoured town that the caravans

assemble in Timbuktu from all points of the compass. . . ." (*Ta'rīkh al-Sūdān*, transl. by Houdas, Ch. i. p. 22). It was further a great centre of the slave-trade. Djenne was also a kind of intellectual centre and a rival of Timbuktu in this respect. The teaching of theology and law flourished in it. Since the occupation of Djenne by the French, it has still retained some importance as a market for the immediate neighbourhood but the suppression of the slave-trade has dealt a death-blow to the prosperity of the town. Its intellectual activity has also sadly declined. Theological instruction is limited to reading the Kor'ān and to the knowledge, absolutely necessary for the correct performance of ritual ceremonies. The religious life there is rather lax, and the brotherhoods, the Ķādiriya and Tidjāniya, which have settled in the town, have great difficulty in winning a few adherents.

The foundation of Djenne seems to date from the third century A. H. In this period the Bozo, who inhabited the district in which Djenne now stands, were conquered by the Nono, invaders from northern Masina, who soon became quite assimilated to them. The conquerors finding themselves rather cramped in Djenne Djeno (Old Djenne), the capital of the Nono, moved their residence to a desert plateau somewhat farther north and there built the present town of Djenne. At this time they were heathen, but readily became converts to Islām. Only the chiefs retained the ancient religion for some centuries longer. Finally in the vi[th] century A. H. (xii[th] A. D.) one of them, Konboro (Rohlf's Kanbara) became a Muslim. According to the *Ta'rīkh al-Sūdān* he destroyed his palace and replaced it by a mosque, which remained unaltered down to the beginning of the xix[th] century and whose remains still survive. The erection of this building was traditionally ascribed to a Moor named Malūm Idris, who is further credited with teaching the people of the town to build and decorate their houses in the style still usual in Djenne and the neighbourhood. Konboro's descendants (the Mana dynasty) remained masters of Djenne till the end of the xv[th] century A. D., when they were overthrown by the Songhai. Sonni 'Alī took the town about 1480 after besieging it for seven years and levied an annual tribute on the inhabitants. Songhai rule was however quite advantageous to the people of Djenne; for owing to the security which reigned throughout the country they were able to trade as far as Timbuktu, Gao and the lands at the bend of the Niger. The Songhai were succeeded by the Moors. Djudar Pasha, entrusted by the Sharīf Aḥmad al-Manṣūr al-Dhahabī with the task of conquering the Sūdān, took Djenne about 1596 A. D. Moroccan rule lasted till the beginning of the xix[th] century. The authority of the Sharīf was maintained at Djenne by a Pasha, and afterwards by a *Ḥākim*, assisted by an *Amīn* or treasurer and a *Ķā'id* in command of the troops. These officers controlled the local administration which was in the hands of a native chief or Djenne-Koi. Moroccan rule was disastrous for Djenne. Numbers of the inhabitants, exasperated by the exactions and treachery of the Moors, decided to emigrate, while the Bambara began in the xviii[th] century to make incursions which grew more and more frequent. One of their chiefs Ngolo (cf. the article BAMBARA) even succeeded in taking the whole district of Djenne with the exception of the capital, in the second half of the xviii[th] century.

The invasion of the Fulbe put an end to Moroccan rule. The people of Djenne, wearied of their old masters, voluntarily submitted to the Marabut Aḥmadu Shaikhu in 1810. But an insurrection stirred up by the Moors resulted in the massacre of the Fulbe who had settled in Djenne and forced Aḥmadu to besiege the town which was only taken after a regular siege. The Moors were then banished and their goods distributed among the Fulbe. Aḥmadu left the local administration in the hands of a native chief but he was careful to leave behind him one of his own officers to supervise him and made Djenne the headquarters of the *Amiru mangal*, or commander-in-chief of his army. In the course of the xix[th] century, Djenne shared the vicissitudes of the Fulbe kingdom. Taken in 1863 by al-Ḥādjdj 'Omar, it remained in the possession of his successors till 1893 when it was occupied by French troops under Colonel Archinard.

Monteil, *Monographie de Djenné, Cercle et Ville*, (Tulle, 1903). (G. YVER.)

DJERBA (the GERBO of Leo Africanus, and GELVES of Marmol) is an island in the Mediterranean in the Gulf of Gabes. It is in the form of an irregular hexagon, measuring 26 miles from east to west and from north to south from 11 to 26 miles and having an area of 224 sq. miles. An arm of the sea about 40 miles broad separates the western side of the island from the Tunisian coast while in the south it is only separated from the mainland by the "Sea of Bugrara", which is practically a lake as it only communicates with the outer sea by two narrow straits. The one on the east opposite Ajim is only $1\frac{1}{4}$ miles broad but accessible to ships drawing from 9 to 12 feet of water, the other in the east opposite al-Ķanṭara, from 2 to 4 miles broad, is so shallow that camels can cross it at low water by following a ford marked with posts (*trīḳ al-djmel*). In the Roman period a causeway, the remains of which still exist, completely blocked this passage. The coast-line about 85 miles long, bordered by sand-dunes and lagoons is on the whole straight, except in the south where the Gulfs of Guellala and al-Ķanṭara run inland and the peninsulas of Bin al-Udiane and Tarbella run out into the sea. The shallows around the coast render access difficult: in the north for example a depth of 5 fathoms is only reached at a distance of 3 or even 6 miles from the shore. The tides are very marked in these waters, where they make a difference in depth of 6 feet and leave large areas uncovered at low water.

The soil of Djerba is composed of argillaceous schists and limestone covered in the north-east of the island by sand. Its contour is not well marked; no point exceeds a height of 160 feet and the general appearance is that of a plateau sloping gently to the north-east and cut from south-west

to north-east by four folds which separate depressions of no great depth. The climate is equable and mild (the mean winter temperature is 56° F., the spring 62° F.) Rains are rare and the rainfall insufficient to supply streams or even springs. On the other hand there is a plentiful supply of subterranean water which supplies wells dug at all points of the island with water suitable for irrigation purposes but is too salt for drinking, which compels the natives to collect rain-water on the roofs of their houses for domestic purposes and keep it in cisterns.

The soil of Djerba is of remarkable fertility. The date-palm, the olive and the vine are the principal fruit-trees. The date-palms (372,000) the fruit of which is of mediocre quality grow best on the coast and form an almost continuous girdle round the island; they are not so numerous in the centre and east where they are found in the gardens along with such fruit-trees as the apple, pear, orange, citron, and pomegranate. The olive-trees (500,000) are found in the centre, particularly in the plateau of Sadwikash. The vine is grown in the eastern part and provides table raisins of high quality. Cereals are little grown and do not suffice for the wants of the inhabitants.

Agriculture is not the only occupation of the people of Djerba. They also have various industries such as the manufacture of oil, of cloths and of pottery. These two last industries are very ancient and supply work for a relatively large number of people. About 700 people live by weaving wool, cotton, or silk and make coats and *haïks*, which are much sought after throughout Tunisia. The potters of Guellala used the plastic clay found in plenty around the town and make white and glazed pottery which is exported to Tunisia and Tripolitania. The people on the coast gain their livelihood from the sea. In 1906, 172 coasting vessels and 200 fishing boats were registered in Djerba.

An industrious people, cool and clear calculators, the Djerbians make excellent business men. Many of them, usually natives of the townships on the east of the island (Midun, Sadghiane) have set up as shopkeepers in Tunisian towns just as the Mzabites have done in Algeria. There are regular colonies of them at Sfax, Susa, and Tunis, having their own organisation, their own chiefs and not mixing with the other Muslim merchants. Enriched by their great industry and rigid economy, the Djerbians usually return to their native island after making their fortunes.

The population of the island numbers 31,802, with an average of 136 people to the square mile, which is much higher than that of the rest of Tunisia (28 to the square mile). The population although dense is widely disseminated. It is not found in towns or villages, in houses built thickly together. The type of house usually found is the *menzel*, a country house with its outhouses, isolated from its neighbours by fields, meadows and earthen walls. Leo Africanus noted this peculiarity and the picture he gives of the island of Djerba in the xvi[th] century is still true to-day. "Gerbo is an island near the mainland, quite flat and sandy, covered with numerous estates, growing vines, dates, figs, olives and other fruits. On each of these estates is a house for the family so that we find innumerable settlements but they rarely consist of several houses together". Some of these estates, with their walls still battlemented or pierced with loopholes, recall the days when the Djerbians, divided into *ṣuf*s at enmity with one another, had to protect themselves against their enemies on the island or from invaders from the mainland. For purposes of administration the island is divided into 16 *khums*, each ruled by a Shaikh, and each of these *khums* is again divided into ḥumats (حومة) or quarters, 97 in all. The most important ḥumats are in the north, Ḥūmt-Sūḳ, where there are a few Europeans, the administrative centre of Djerba; in the east Midun, Sadghiane (2466 inhabitants), Offar (3400); in the west Beni Diss (2435), Ajim (4000); in the centre Sadwikash (2500) and Guellala (4010).

The native population consists of diverse elements; the great majority are Berbers but there are also Arabs and Jews. According to Ibn Khaldūn (*Hist. des Berb.*, transl. by de Slane, i. 173), the Berbers of Djerba belong for the most part to the Lamāya tribe. The latter were followers of the Abāḍī heresy when in 144 (761-762) Ibn Rustam, driven from Kairawān by the ʿAbbāsid governor Muḥammad b. al-Ashʿath, retired to the Central Maghrib and uniting the Lamāya and the ʿAbāḍī Luwāta under his sway founded the kingdom of Tāhart. On the overthrow of the Rustamids by the Fāṭimids, a section of the Lamāya adopted the doctrines of their conquerors, while the others remained faithful to the religion of their ancestors. The destruction of Tāhart by the Almoravid Ibn Ghāniya (605 = 1208) forced the Lamāya to disperse. Some settled in Tlemcen, others went to Djerba where a Kutāmian tribe, the Sadwikash, was already installed; these were Berbers who had preserved Khāridjī doctrines, as several passages in al-Bakrī show, who describes the Djerbians as a "wicked and treacherous" people (Bakrī, *Descr. de l'Afrique*, transl. de Slane, 48, 198).

The Djerbians differ in language and religion from the other peoples of Tunisia. They have retained their ancient Berber dialect, called by them Shelḥa. This dialect according to R. Basset, resembles in its vocabulary, the Rīf, Zuwāwa and Mzāb. Like the dialect of Mzāb it has retained the ancient Berber numeral system almost in its entirety. The very numerous mosques — there are 284 in all — present certain peculiarities of architecture, notably the low, square minarets, surmounted by a conical stone, which some scholars consider to be a reminiscence of an ancient phallic cult. Although the Djerbians do not seem ever to have troubled much about intellectual culture, they have produced several scholars (Abāḍī) of some repute. Such were Ibn Messewar (died at the beginning of the 1st century A. H.); Ismāʿīl al-Djaiṭālī (died 730 A. H.); Shammākh al-Djahlānī (flourished in the xi[th] century A. H.); Ibrāhīm al-Tlatī (executed by Dragut's orders); Aḥmad b. Abi Satta (died 1061 A. H.); Ibrāhīm al-Djamenī (1057—1134 A. H.).

Arabs are represented by a section of the Hazem, a tribe settled in the south of Gabes and by the Ulad Metabeul who have migrated in recent times to the neighbourhood of Ajim. The Jews are found in two settlements of Ḥāra Kabīra (2500 inhabitants) and Ḥāra Ṣaghīra (500) to the south of Ḥūmt-Sūḳ.

Djerba, which is thought to be the island of

the lotos-eaters of the Odyssey, was known to the ancients as Meninx. The Phoenicians had trading-settlements there; the Carthaginians and after them the Romans held it under their sway. In Imperial times, Djerba seems to have been thickly populated and very prosperous. It contained several towns, Meninx (al-Ḳanṭara), Tipasa (near Ajim), Haribus (not far from Guellala), and near the modern Ḥūmt-Sūḳ, Gerba or Girba, to which the island owes its name. After belonging to the Vandals and then to the Byzantines, the island was taken by the Arabs who captured it about 43 (665) under Ruwaifa ibn Thābit al-Anṣārī. We know practically nothing of its history in the early centuries of the Muslim occupation. Al-Bakrī only mentions that in his time, Djerba was peopled by brown Berbers, who only spoke Berber, professed Khāridjī doctrines and lived by brigandage and piracy (Bakrī, *Descr. de l'Afr.*, *loc. cit.*). Al-Idrīsī (*Descr. de l'Afr.*, transl. de Goeje, p. 151) calls the Djerbians "a people of bad and hypocritical character, always ready to rebel and unwilling to receive law from any one". It may be surmised that, protected by the situation of the island, they remained practically independent of the Muslim sovereigns of Ifrīḳiya.

On the other hand they had to put up with severe fighting with the Christians. The Normans of Sicily tried to put an end to the depredations of its corsairs by taking the island itself. In 1135 A. D., George of Antioch, Roger II's Admiral, occupied Djerba. The women and children were sent captives to Sicily and the island incorporated in the kingdom. A rising which broke out in 1153 provoked strenuous reprisals but did not save the Norman suzerainty. 'Abd al-Mu'min after making himself master of Mahdiya and all the Tunisian coast, drove the Christians out of Djerba (1159—1160). They reappeared in 1284 when Roger Doria, Admiral of Peter of Aragon, king of Sicily, took advantage of the dissensions which were rending the Ḥafṣid kingdom to attack Djerba. He twice landed troops on the island (1284-1285), ravaged it, carried off 2000 inhabitants whom he sold as slaves in Europe and finally took possession of Djerba. He offered it in homage to the Pope, who granted it to him as a hereditary fief. It remained in the hands of his heirs till 1310 A. D., when two factions divided the population, that of Mu'āwiya, favourable to the Christians, and that of Mastuna, hostile to them. The latter appealed to the Ḥafṣid Sulṭān, who twice tried without success to dislodge the Christians. The rivalry between the two factions however continued to foster disorder. To put an end to this state of affairs, Frederick of Aragon to whom the guardian of the last male descendant of Roger Doria had pledged Djerba, called in the Catalan adventurer Ramón Muntanér. The latter established peace by bloody executions and governed the island for three years (1311—1314) after which it was restored to the direct rule of the Kings of Sicily. The chicanery and exactions of the governors provoked another rising in 1334. The Sicilian troops were driven out; the castle of Cāchstil (Bordj Ḳashtīl), built by Roger Doria, was taken by assault and those soldiers, who escaped the massacre, sold as slaves. The kings of Sicily, nevertheless, insisted on asserting their claim to Djerba. In 1383, with the help of the Genoese, they succeeded in regaining a footing on the island, where they maintained a garrison till 1392. But the attempts made in the century following by King Alfonso V (1424—1432) to regain this important position, ended in failure.

Free from Christian rule, the Djerbians did not long submit to the Ḥafṣids. According to Leo Africanus, on the death of Sulṭān Abū 'Omar 'Othmān (1480 A. D.), they gained their independence and to protect themselves from the attacks, which they always had to fear from the mainland, destroyed the causeway, which united the southern coast with the continent. About the same time, the chief of one of the two ṣuffs, which disputed the supremacy of the island, slew his rival and founded a hereditary principality. These changes were accompanied by great bloodshed and turbulence: according to Leo Africanus, ten Shaikhs were murdered in ten years. In spite of this anarchy, trade was flourishing enough to yield the rulers of Djerba 80,000 doubloons from the customs and salt-tax. A few Italian merchants continued to visit the harbours of the island and traded there with merchants from Tunisia, Turkey and Egypt. The inhabitants enriched themselves by the export of clothstuffs to Egypt but their chief source of wealth was piracy on Christian nations.

In the second half of the xv^th^ century, Djerba had become a centre of the Barbary corsairs, at the beginning of the following century 'Arūdj and his brothers made the island the base for their operations in the Mediterranean. Dragut next made the island his headquarters and maintained his hold on it in spite of the efforts of a section of the inhabitants to drive him out; the waters of Djerba afforded his ships a safe refuge from the attacks of the Spanish fleet. But he was finally blockaded by Andreas Doria in the sea of Bū-Grara and only escaped by having his galleys hauled over the peninsula of al-Ḳanṭara by night (1541). Dragut allowed the Shaikh who governed the island to remain in power but he took care to rebuild the burdj of Ḥūmt-Sūḳ (Burdj al-Kabīr) built a century earlier by the Ḥafṣids. The rebuilding was finished in 1557 and is commemorated by an inscription which still exists (cf. R. Basset and Houdas, *Epigraphie Tunisienne* in the *Bulletin de Correspondance Africaine* 1882, p. 196). Three years later a Spanish expedition under the Duke of Medina-Coeli sent against Tripoli appeared before Djerba. The Spaniards took possession of the island without difficulty and placed a garrison on it (February—March 1560). But, defeated on the 15th March by Piali Pasha, Medina-Coeli had to retire to Sicily leaving the garrison exposed to the attacks of the Turks. The Spaniards, commanded by Don Alvar de Sande held out until famine and disease forced them to capitulate. They were all massacred and their bones used to build a pyramid near the Burdj al-Kabīr, called Burdj al-Riūs (the "castle of heads"), which was not destroyed till 1848.

When the Turks had definitely established themselves in Tunisia, Djerba recognised their authority, while continuing to be administered by its hereditary Shaikhs. The family of Sammumni, which held this office in the xvi^th^ century, was succeeded by that of the Djalādiyīn, descendants of Mūsā b. Djalīd, who had been given the office by Dragut and whose last representative was deposed by the Bey 'Alī b. Ḥusain b. 'Alī. These Shaikhs showed themselves very independent of the Tur-

kish Pashas as may be seen from the rebellions which broke out in 1599, 1600 and 1601. The peace of the island was also disturbed by the attacks of enemies from without. The people of Tripoli tried to envade Djerba in 1603 but the expedition was speedily repulsed, driven into the sea and exterminated. In the xviii[th] century the Urghamma and the Accara, called in by Aḥmad b. Mūsā, who wished to avenge his father, who had been assassinated by orders of 'Alī Pasha, attacked the Shaikh Mūsā b. Ṣalāḥ and forced him to seek refuge on the continent. Returning soon after with troops supplied him by Yunus-Bey, Mūsā defeated the partisans of Aḥmad, put a great many to death and with their bones erected a pyramid near the Burdj al-Rīfs. In 1792, the Corsar 'Alī Bulgur after having driven out of Tripoli the Pasha 'Alī Ḳaramanli, tried to take Djerba. His lieutenant Ḳara Muḥammad landed on the island, forced the Tunisian governor Ḥamida to take to flight, but on the arrival of Ḥamūda, the Bey of Tunis, had to vacate the island after occupying it for 58 days. In the xix[th] century, Djerba, whose prosperity had already been much affected by epidemics of plague (1809, 1864), and by the suppression of slavery, which kept caravans from the island, suffered a great deal from the suppression of a rising provoked in 1864 by the preachings of a pretended mahdi. Since then absolute tranquillity has reigned in the island. The establishment of the French protectorate caused no trouble. On the 28[th] July 1881, French troops occupied the Burdj al-Kabīr without opposition. Military occupation was of short duration only and at the present day there is no longer even a garrison in the island.

DJESSORE is a district in the Presidency of Bengal, lying in the Hooghly Delta some 60 miles East and North East of Calcutta, between 22.47—23.47 degrees North and 88.40—89.50 degrees East. Of its population of 1,800,000, 61% are Muḥammadans. It is entirely an alluvial country formed by the rivers Hooghly and Meghnā, and is famous for its rice cultivation. A Muḥammadan governor, Khān Djahān 'Alī, ruled in Djessore in the middle of the xv[th] century, and subsequently Hindu chiefs controlled the country under the Muḥammadan Kings of Bengal. The Nawwāb of Dhākā interfered in the district early in the xviii[th] century. In 1765 the administration passed with the rest of Bengal into the hands of the East India Company. The Muḥammadan residents are chiefly converts from the aboriginal Namasudras of the District.

DJEZĀ'IR-I BAḤR-I SEFĪD. [See AḲ DEÑIZ, p. 224].

DJEZĀ'IRLI GHĀZĪ ḤASAN PASHA nicknamed Palabiyik ("scimitar-moustache") one of the greatest High Admirals (Kapudan Pasha) in Ottoman history, belonged to Rodosto (Tekfurdaghi) on the Sea of Marmora, where he is said to have been a slave of a merchant named Ḥādjdjī Osman Aghā, after being manumitted took part as a janissary in the Austrian war of 1737—1739 and particularly distinguished himself at the battle of Krozka (Hiṣārdjik) on the 23[rd] July 1739. At the end of the war he went to Algiers where he became a dey and finally was appointed Beg of Tlemcen. To escape the machinations of the Pasha of Algiers he escaped to Spain via Oran, where he was kindly received by Charles IV. Recommended by him to the king of Naples and the latter's representative at Constantinople, he returned to the Turkish capital in 1760 and was at once appointed by Sulṭān Muṣṭafā III to the command of a warship; in 1180 (1766-1767) he was appointed to the *kapudana* (flagship) and in 1770 took part in the naval war with Russia. At the battle of Česhme [q. v., p. 830] the kapudana commanded by him went on fire in attempting to grapple the Russian flagship and both vessels were burnt to the water's edge; Ḥasanbeg escaped, although wounded, by swimming and reached the Dardanelles by land; on the 10[th] October 1770 he succeeded in winning back the island of Lemnos from the Russians by a bold stroke. For this brilliant feat of arms he received the title Ghāzī and the rank of Kapudan Pasha. In 1773 and 1774 in his capacity as Seraskier of Rustchuk he took part in the war with Russia by land; after the peace of Kainardja (July 1774) he resumed his post of Kapudan Pasha. During the next two years (1189-1190 = 1775-1776) he destroyed the power of Shaikh Ṭāhir 'Omar and his sons in 'Akkā; in 1192 (1778), when the negotiations with Russia regarding the Crimea threatened an outbreak of war, he made a demonstration with a fleet in the Black Sea, which however quite failed in its purpose while several of his larger ships were stranded or otherwise lost and the crews were decimated by the plague. His expedition to the Morea took place in 1193 (1779), where he routed the Albanian hordes who had settled there on the withdrawal of the Russian fleet. In 1194 (1780) he appeared before Alexandria and collected the Egyptian tribute, payment of which had been refused for several years; on his return voyage he chastised the rebellious Mainots. In 1195 (1781) on the death of the Grand Vizier Silihdār Meḥemmed Pasha (20[th] February), as Ḳā'immaḳām he executed the duties of Grand Vizier for two months. For the next few years he was mainly occupied with the reorganisation of the navy, built the first quarters for the crews (1784), organised the garrisons in the forts

on the Bosporus at the entrance to the Black Sea and at the beginning of 1786 acted as Grand Vizier for a short time. During 1200-1201 (1786-1787) he restored the authority of the Porte in Egypt, which had become almost independent under the Mamlūk Begs Murād and Ibrāhīm. Although he had but insufficient forces at his disposal, he fought his way to Cairo, relieved Yegen Meḥemmed Pasha who was besieged there (8th August 1786) and routed the rebel Begs; while still engaged in restoring order in Egypt, he was summoned away in August on account of the danger threatening from Russia. On the outbreak of hostilities he was entrusted with the relief of Oczakow in 1788; he was unsuccessful in several seafights with the Russians off Oczakow in July 1788 and although he succeeded in throwing reinforcements and provisions into the fortress, he was not able to force the enemy to raise the siege. After losing several more ships in a storm, he returned to Constantinople at the beginning of December 1788. On the 7th April 1789 his patron, Sulṭān 'Abd al-Ḥamīd, died. Selīm III, his successor, appointed Küčük Ḥusain Pasha Kapudan Pasha and Djezā'irli Ḥasan Pasha Seraskier of Ismā'īl. After the Grand Vizier had been severely defeated at Martineschti (22nd September) and died soon after, Ḥasan Pasha took over the supreme command and was appointed Grand Vizier (in the beginning of October). He wintered in Shumla and from there entered into negotiations with Prince Potemkin. A few days after ordering the march out from winter quarters, he fell ill and died on the 14th Radjab 1204 = 30th March 1790, according to some of an inflammatory fever, though according to another story, current even among his contemporaries, from eating a poisoned musk-pill (*ḳurṣ*) which the Sulṭān had sent him. He was buried in the Bektashi monastery built by him before the gates of Shumla.

Djezā'irli Ghāzī Ḥasan Pasha was pre-eminently distinguished for his personal valour. His expeditions to Syria, to the Morea and to Egypt show not only great military ability but also a political insight rare in his day. Although his two expeditions to the Black Sea in 1778 and 1788 ended unfortunately, he is entitled to great credit for reconstructing the fleet destroyed in the battle of Česhme and for beginning the reorganisation of the Turkish fleet with the help of European experts, a course which was continued by his successors.

DJIBĀL, plural of the Arabic *djabal* (mountain or hill), a name given by the Arabs to 'Irāḳ 'Adjamī, the ancient Media. The Djibāl comprised *Māh* (*Māda*, Media: Nöldeke, *Gesch. der Araber* etc., p. 103, note 1 following Lagarde and Olshausen) from Kūfa and Baṣra (Iṣṭakhrī, p. 195; Ibn Ḥawḳal, p. 255), i. e. the province bounded in the east by the desert of Khorāsān and by Fārs, in the west by Ādharbaidjān, in the north by the Alburz range and in the south by 'Irāḳ 'Arabī and Khūzistān. The name is derived from the fact that this province with the exception of the plain which stretches from Hamadhān to Raiy (near Teherān), and that which stretches towards Ḳumm, is wholly mountainous; there is not a navigable river in it. There are mines of antimony at Iṣfahān (Iṣṭakhrī, p. 203; Ibn Ḥawḳal, p. 267); the climate is in general cold and there is a great deal of snow in winter. — The name "Old Man of the Mountains", *Senior*, *Senex*, *Vetulus de Monte*, given by the western historians of the Crusades to the Grand Master of the Assassins, is the literal but erroneous translation of the Arabic Shaikh al-Djibāl which really means "Prior (of the Ismā'īlīs) of Media". His capital was the fortress of Alamūt near Ḳazwīn.

Bibliography: Yāḳūt, *Mu'djam*, ii. 15; (= Barbier de Meynard, *Dict. de la Perse*, 151); A. F. Mehren, *Manuel de la Cosmographie*, p. 248; Muḳaddasī (ed. de Goeje), p. 384; G. Le Strange, *The Lands of the Eastern Caliphate*, p. 185 *et seq.* (CL. HUART.)

AL-**DJIBĀL**, is the name of a district in the very south of Syria in the highlands east of the 'Araba [q. v., p. 362] between Sēl al-Ḳerāḥī in the north and Wādī Abu 'l-Ḥamām in the south (see Musil, *Arabia Petraea*, ii., part I., pag. 1). The name first appears in the form gebal in Psalm 83, 8. The Greek [illegible] is sometimes used very vaguely. In the older Arab geographers al-Djibāl appears along with al-Sharā as the name of a district in the *djund* of Damascus (Ya'ḳūbī, ed. de Goeje, p. 114) or in the *djund* of Filasṭīn (Iṣṭakhrī, p. 58; Ibn Ḥawḳal, p. 113). While Ya'ḳūbī gives Gharandal, the ancient Arindela as its capital, Iṣṭakhrī gives Ruwwāth (see Musil, *op. cit.* ii. 2, p. 240), obviously the Robathe of the ancients. Cf. Idrīsī in the *Zeitschr. des Deutschen Pal. Vereins*, viii. 123 and 5; G. Le Strange, *Palestine under the Moslems*, p. 33, 35, 395.

(R. HARTMANN.)

DJIBŪTI, the capital of the French settlements on the coasts of the Red Sea opposite Obock, on the other side of the Bay of Tadjurra. Djibūtī was founded in 1888 by Governor Lagarde, who had noticed the advantages of the site as the terminus of the proposed railway-line from the coast to the south of Ethiopia, which has since been completed. In 1894 the seat of the government was transferred hither and the place developed so quickly that by 1891 it had 6000 inhabitants. Since then it has continued to increase. Djibūtī is connected by cable with Perim and thence with Europe. Next to French, Greeks and Italians form the most important elements in the European population, while the natives are Somalis.

(René Basset.)

DJIDDA, pronounced Djudda by Arab authors, an Arabian seaport on the Red Sea in 21° 28′ 30″ N. Lat. and 39° 16′ 45″ E. Long.; its surroundings are desert. In spite of its notorious climate and bad water-supply, the town dates from pre-Muḥammadan times, although we have no authoritative statement on the point (cf. Sprenger, *Alte Geogr. Arabiens*, p. 39).

The foundations of its future importance were laid in 26 A. H. by the Caliph ʿOthmān when he chose it as the harbour of Mecca. Mecca, the centre of the whole Muslim world, was from the earliest times destined to be a great importing centre. The town was provided with supplies from Egypt via Djidda. Djidda is thus the key of Mecca and Mecca and Djidda are economically and therefore politically dependent on Egypt. The customs (see Muḳaddasī, p. 79 and 104) of Djidda, which is described as a prosperous commercial town even in Iṣṭakhrī's time, formed a considerable source of revenue to the rulers of the Ḥidjāz at that time. In addition there were the taxes levied on the pilgrims: for it was here that those who came by sea, particularly the African pilgrims who sailed from ʿAidhāb [q. v., p. 210], landed on Arabian soil. Nāṣir-i Khusraw (ed. Schefer, p. 65 = p. 181—183 of the translation) in the vth = xi^th^ century found the unwalled town, whose male population he estimated at 5000, governed by a slave of the reigning Sharīf of Mecca, whose chief duty was the collection of the revenues; and Idrīsī (transl. by Jaubert, i. 134, 136) informs us that the Sharīf's finances were dependent on the receipts of the harbour of Djidda. The town gradually became a centre of the world's commerce, where ships from Egypt met those from India and East Africa.

Ibn Djubair (ed. de Goeje, p. 75 *et seq.*) gives us a clear picture of the town, as it appeared in 579 = 1183 with its reed huts and stone khāns, the remains of its walls and the mosques, which were said to have been built by ʿOmar and Hārūn al-Rashīd, and its inhabitants of Sharīfī descent, and he praises Ṣalāḥ al-Dīn for having abolished the taxes levied by the Sharīfs.

The tolls which continued to be levied on the Indian ships, sometimes threatened to become oppressive. On the other hand the cupidity of the suzerains of the Ḥidjāz, the Mamlūks of Egypt, had been aroused. After 1542 they took the collection into their own hands, later to share the plunder with the Sharīfs (see Snouck Hurgronje, *Mekka*, i. 92 *et seq.*, 99). Finally in 1511, Sulṭān Ḳānṣauh al-Ghūrī sent a special Wālī to Djidda, who surrounded the town with a wall to protect it from the Beduins and made it a base for the navy fighting the Portuguese (*ibid.*, i. 102). That the fortification was not unnecessary was shown by the fact that when the Egyptian suzerainty had been changed for the Turkish, it was attacked by the Portuguese in 1541 (*ibid.*, p. 104). Under the Turks also the revenues of the harbour of Djidda, where a Turkish Wālī resided, were shared (Ḥādjdjī Khalīfa, *Djihānnumā*, Constantinople 1145, p. 519; transl. Norberg, ii. 184). These revenues, of course, soon began to diminish although the trade in coffee and Indian wares was still considerable as late as the beginning of the xix^th^ century.

In 1803 the Wahhābīs besieged the Sharīf Ghālib without success in Djidda, which was securely fortified. But he had ultimately to submit to them until Mehemmed ʿAlī finally restored Turkish suzerainty. In 1814 Burckhardt described Djidda as a town with 12,000—15,000 inhabitants, whose recently built walls, with the stone houses, that had been growing up under Egyptian rule, enclosed a wide area covered with wretched reed huts. He was particularly struck by the fact that in the crowds that thronged Djidda, the indigenous elements were scantily represented, while strangers from Yaman and Ḥaḍramawt were particularly numerous. In 1840 Egyptian rule again replaced the direct rule of the Porte, which as before was represented by a Wālī in Djidda. The assassination of the English and French consuls and other Christians in Djidda on the 15th June 1858 resulted on the 25th July in its bombardment (cf. Snouck Hurgronje in *Bijdragen tot de Taal-, Land- en Volkenkunde van Nederlandsch-Indië*, 5th Series, ii. 381 *et seq.* and 399 *et seq.*). Maltzan, who made the pilgrimage in 1860, describes Djidda in very similar terms to Burckhardt and estimates the population at 15,000 (Heuglin in 1864 at 40,000). The opening of the Suez Canal has quite put an end to Djidda's share in the world commerce, which had for years been diminishing (cf. Snouck Hurgronje, in the *Verhandl. der Gesellsch. für Erdkunde*, xiv. 141). It has still considerable imports (about 1,500,000) as the source of supplies for the Ḥidjāz but exports practically nothing in return. Djidda's main importance now lies in the fact that it is the landing-place of pilgrims for Mecca, of whom 80,000—90,000 annually enter Arabia here. The line to Mecca planned in connection with the Ḥidjāz railway has not yet been made.

The town which now has about 30,000 inhabitants (Arabs mingled with Takrūrīs, etc.; about 50 Christians) has been the headquarters of a Ḳāʾimmaḳām since the Wālī transferred his residence to Mecca. The rows of white houses in the town stretch up the slopes of a low hill along the shallow bay, which the larger ships cannot enter. The 10 feet high wall around the town is pierced by three gates, the Bāb al-Sharīf at the customs-house in the west, the Bāb Mecca in the east and the Bāb al-Djadīd or Bāb al-Madīna in the north, near which lie the European consulates and before which is the celebrated and much visited tomb of Eve.

(R. Hartmann.)

DJIHĀD. The spread of Islām by arms is a religious duty upon Muslims in general. It narrowly escaped being a sixth *rukn*, or fundamental duty, and is indeed still so regarded by the descendants of the Khāridjites. This position was reached gradually but quickly. In the Meccan Sūras of the Ḳurʾān patience under attack is taught; no

other attitude was possible. But at Medina the right to repel attack appears, and gradually it became a prescribed duty to fight against and subdue the hostile Meccans. Whether Muḥammad himself recognized that his position implied steady and unprovoked war against the unbelieving world until it was subdued to Islām may be in doubt. Traditions are explicit on the point; but the Ḳurʾānic passages speak always of the unbelievers who are to be subdued as dangerous or faithless. Still, the story of his writing to the powers around him shows that such a universal position was implicit in his mind, and it certainly developed immediately after his death, when the Muslim armies advanced out of Arabia. It is now a *farḍ ʿala 'l-kifāya*, a duty in general on all male, free, adult Muslims, sane in mind and body and having means enough to reach the Muslim army, yet not a duty necessarily on every individual but sufficiently performed when done by a certain number. So it must continue to be done until the whole world is under the rule of Islām. It must be controlled or headed by a Muslim sovereign or Imām. As the Imām of the Shīʿites is now invisible, they cannot have a *djihād* until he reappears. Further, the requirement will be met if such a sovereign makes an expedition once a year, or, even, it is now held, if he makes annual preparation for one. The people against whom the *djihād* is directed must first be invited to embrace Islām. On refusal they have another choice. They may submit to Muslim rule, become Dhimmis [q. v.] and pay *djizya* and *kharādj* [q. v.] or fight. In the first case, their lives, families and property are assured to them, but they have a definitely inferior status, with no technical citizenship, and a standing only as protected wards. If they fight, they and their families may be enslaved and all their property seized as booty, four-fifths of which goes to the conquering army. If they embrace Islām, and it is open to them to do so even when the armies are face to face, they become part of the Muslim community with all its rights and duties. Apostates must be put to death. But if a Muslim country is invaded by unbelievers, the Imām may issue a general summons calling all Muslims there to arms, and as the danger grows so may the width of the summons until the whole Muslim world is involved. A Muslim who dies fighting in the Path of Allāh (*fī sabīl Allāh*) is a martyr (*shahīd*) and is assured of Paradise and of peculiar privileges there. Such a death was, in the early generations, regarded as the peculiar crown of a pious life. It is still, on occasions, a strong incitement but when Islām ceased to conquer, it lost its supreme value. Even yet, however, any war between Muslims and non-Muslims must be a *djihād* with its incitements and rewards. Of course, such modern movements as the so-called Muʿtazilite in India and the Young Turk in Turkey reject this and endeavour to explain away its basis; but the Muslim masses still follow the unanimous voice of the canon lawyers. Islām must be completely made over before the doctrine of *djihād* can be eliminated. See also *Dār al-ḥarb*, *Dār al-Islām* and *Dār al-ṣulḥ*. The latter seems to be a mediating position which failed.

DJIHĀNGĪR. [See djahāngīr, p. 997.]

DJIDJELLI (Gigeri in Leo Africanus; the Zizeri, Zigeri-Gigerry, Gigeri of western writers) a town on the Algerian coast, 50 miles west of Bougie and 30 east of Collo in 36° 40′ 54″ N. Lat. and 5° 44′ 23″ E. Long. (Greenwich) with 6300 inhabitants including 1300 Europeans. The old town of Djidjelli was built on a rocky peninsula where the citadel still stands, extending between two bays, one on the west, small and well sheltered, and the eastern, wind-swept, separated from the open sea by a ridge of rock. The modern town with its broad streets shaded by plane-trees was built in 1856 after the destruction of the old Turkish town by an earthquake. It lies along the coast beside the longer eastern bay. The harbour which is protected from the waves of the open sea by a breakwater recently built is of some importance for its exports of cork produced by the forests of Little Kabylia. The working of the numerous ore deposits in the coast-lands as well as the building of a railway connecting Djidjelli with the interior will certainly promote trade and industry.

The origin of Djidjelli is very remote. The Phoenicians built a trading-centre here, which they called Idgil which afterwards passed into the possession of the Carthaginians. In Roman times the Colony of Igilgili belonged to Caesarea Mauretania but under Diocletian it was attached to Sitifi Mauretania. The city was the see of a bishop, and passed in turn under Vandal and Byzantine rule but retained its independence after the conquest of the Maghrib by the Arabs. Ibn Khaldūn tells us that in the early centuries A. H. Djidjelli belonged to the Berber tribe of Ketāma, who lived in the adjoining mountains (Ibn Khaldūn, *Hist. des Berbères*, transl. by de Slane, i. 198). It seems however to have been laid waste and partly depopulated, for Bakrī describes it as a town "which is now inhabited", (*Descr. de l'Afrique Septentrionale*, transl. by de Slane, p. 153). According to this geographer it still possessed some remains of ancient buildings. It had two harbours, one difficult to enter in the south and a second, smaller but "calm as a millpond and quite safe". Its inhabitants exported copper ore from the neighbouring hills to Ifrīḳiya and thence to more distant lands (Idrīsī, transl. by de Goeje, p. 114). The Ḥammādids, who had incorporated Djidjelli in their kingdom, built a castle there.

In the xiith century A. D. Djidjelli, like various other towns on the African coast passed under Christian rule. In 1143 George of Antioch the Admiral of Roger II of Sicily took the town and its citadel. The inhabitants fled to the mountains where they built a fort but always returned to the town in the winter time when the stormy weather forced the Christian fleet to return to Sicily and left it again in the spring as soon as the Sicilian ships again appeared off the coast. This state of affairs lasted till ʿAbd al-Muʾmin overthrew the Ḥammādid dynasty in 1152 A. D. and next forced the Christian to vacate Djidjelli.

After the break-up of the Almohad kingdom Djijelli fell to the Ḥafṣids and repeatedly formed a bone of contention between the rulers of Bougie and those of Tunis. In consequence of these hostilities the inhabitants made themselves practically independent of both parties (Leo Africanus, Book v., ed. Schefer, ii. 83). They lived by the export of corn, flax, hemp, nuts and figs, which they sent to Tunis, Egypt and even to Italian cities. Their harbour was frequented by the ships of Christian nations, from Naples, Pisa, Catalonia and Genoa. The merchants of the lastnamed town were particularly well received. Djijelli's commercial importance decreased in the xvth century as a result of the increase of piracy.

At the beginning of the xvith century, the Genoese, uneasy at the occupation of Bougie [q. v., p. 766] by the Spaniards, seized Djijelli under the leadership of Andreas Doria. But by the next year ʿArūdj captured the Genoese fortress at the invitation of the inhabitants, supported by the Kabyl chief Aḥmad b. al-Ḳāḍī, and made Djijelli his capital. In 1572 he proceeded hence to besiege Bougie and in 1516 to the conquest of Algiers (see the article ʿArūdj, p. 471). Khair al-Dīn defeated by the Kabyls sought refuge here while his enemies sacked Mitidja and seized Algiers. He remained in Djijelli from 1520 to 1527, made it the winter quarters of his fleet and was even meditating making it his headquarters when he gave up this idea on taking the Peñon of Algiers [cf. the article KHAIR AL-DĪN]; as a reward for their fidelity, however, he granted the people of Djijelli and their descendants, complete exemption from taxes in kind.

Throughout the whole of the xvith century and the first half of the xviith century the pirates of Djijelli continued their piracies, and thus provoked reprisals from the Christian powers. A Spanish fleet commanded by the Marquis de Santa Cruz effected a landing at Djijelli in 1611 and set the town on fire. In 1663 on the advice of admiral Duquesne and the engineer Clerville the French government proposed to make Djijelli a permanent naval base for the cruisers sent against the Barbary corsairs. In the following year a squadron under the command of the Comte de Beaufort appeared before Djijelli and landed a body of 8000 troops commanded by the Comte de Gadagne. The French troops occupied the town on the 23rd July 1664 almost without striking a blow and made entrenchments and fortifications some distance from the shore. But paralysed by a feud between the two leaders, they remained inactive in their positions and allowed the Algerians to send reinforcements and plant batteries of large calibre. Overcome by the enemy's fire they had to quit the town on the 31st October 1664 and embarked with great difficulty after losing 2000 men.

To guard against future attacks, the Turks installed a permanent garrison in the town; but it was much too weak to overawe the Kabyl tribes and remained almost constantly besieged in the citadel. The Deys carried on no negotiations with the natives, from whom they had to get the wood necessary for the building of ships, except through the marabouts belonging to one of the branches of the family of Muḳrānī. One of them, al-Ḥādjdj ʿAbd al-Ḳādir, was appointed marabout of Djijelli in 1168 (1755) and transmitted this honour to his descendants. Djijelli seems to have recovered its commercial activity in this period. "The town", writes the French traveller Peyssonel, "is inhabited by Moors, most of whom are merchants or sailors; they buy the wax, hides, and wools of the Ḳabyls and sell them at La Calle, Tabarque and Tunis. They also collect coral. Although wretched in appearance, the town continues to be prosperous".

This comparative prosperity received a shock from the Ḳabyl insurrection of 1803. The Marabout Bu Dali (al-Ḥādjdj Muḥammad b. al-Harsh) attacked the town and the Turkish garrison fled. Bu Dali proclaimed himself Sulṭān and granted the government of Djijelli to one of his partisans with the title Agha. Sent with a fleet to chastise the rebels, the Raʾīs Ḥamīdu bombarded the town without any result (1805). Shortly afterwards, however, the inhabitants, being badly treated by the Kabyls, submitted to the Dey, who installed another garrison in the town.

The collapse of Turkish authority in 1830 restored their independence to the people of Djijelli and they retained it till 1839. The pillaging of a French trading vessel about this time determined Marshal Valée, governor-general of Algeria, to occupy the town on the 13th May 1839. But the garrison, being unable to communicate with the hinterland, was cut off by the Ḳabyls till an expedition, led by General Saint-Arnaud, effected the submission of the tribes of Little Kabylia in 1851.

(G. YVER.)

DJILLIḲ, a place in Syria, the actual site of which was forgotten by the Arab geographers at quite an early period; sometimes they located Djilliḳ in the Ghūṭa, sometimes they identified it with it, and sometimes they identified it with Damascus; an unlucky gloss by Ṭabarī has even lead scholars to locate it in the land west of the Jordan (according to de Goeje's proposal in Djinnīn). Djilliḳ was one of the residences of the Djafnid Ghassānid Amīrs, next to Djābiya [q. v., p. 988] the most important and most often mentioned. They had a family mausoleum here and suffered a defeat here at the hands of their enemies, the Lakhmids, a detail, which would not suit the neighbourhood of Damascus or other suggested identifications given above of Djilliḳ. It must have been a place of some size, with several churches. Djilliḳ was celebrated for its gardens, particularly its orchards of olives, and its plentiful water-supply had become proverbial. A clue to its location is given in the old poetry by the mention of several places, all south of Ḥawrān and Djawlān, such as Ḥārib, and Ṣaidā, which is confused in the *Khizānat al-Adab*, ii. 10, with the seaport of the same name (Sidon). Djilliḳ lay southeast of Hermon; coming from Arabia, "the mountain of snow was seen behind it". It was not very far from Boṣrā [q. v., p. 765] and so near Balḳāʾ that the road thither could be seen from its gates. A road from Damascus to Egypt also passed through its immediate neighbourhood. When we further consider that a *Thaniya*, or ravine bearing its name was mentioned in the neighbour-

hood, the whole picture formed by these topographical details points to a place which still exists in southern Ḥawrān: Djillīn. The change in the final consonant is, however, a philological difficulty which has not yet been explained.

In the year 12 A. H. (634 A. D.) at the beginning of the first Arab invasion the Byzantines formed a temporary base at Djilliḳ on learning of the devastation of the lands south of the land east of the Jordan and in Palestine, to be prepared for the invaders if they should cross one of the sides of the valley of Jordan: Balḳā or Samaria. In 15 on the approach of the reinforcements sent by Heraclius the Arabs vacated Damascus and took up a position in the south of Ḥawrān on the edge of the desert not far from Adhri'āt [q. v., p. 135], commanding the road from Damascus to Arabia, from which they could observe the enemy's movements and await the reinforcements summoned from Medina, whereupon the Byzantines again took up their old position at Djilliḳ. By a successful turning movement the Arabs were at first able to cut off the road to Damascus; a second move drove the Byzantines back towards the valley of the Yarmūk and its tributaries, the 'Allān and the Ruḳḳād, and a final onslaught drove them into the ravines dug out by these rivers between Djawlān and 'Adjlūn, a series of manoeuvres crowned by the victory of Yarmūk. Yazīd I. seems to have chosen Djilliḳ as one of his *bādiya* [q. v., p. 557]. Driven out of Syria, the Umaiyads took with them to Spain the name Djilliḳ and gave it to a place near Saragossa, celebrated for its abundant water-supply; after this date Djilliḳ disappears from history; the name was saved from oblivion by the poets of Damascus finding this place-name in Ḥassān b. Thābit. The Baradā being mentioned in the same poem, they were lead — and following them several Arab encyclopaedists — to regard Djilliḳ as one of the names of their native city.

(H. LAMMENS.)

DJILWA, the ceremony of raising the bride's veil, and the present made by the husband to the wife on this occasion.

According to Djurdjānī and Muḥyi 'l-Dīn al-'Arabī (*Definitiones*, p. 80, 294), *djilwa* is the name of the state in which the mystic is on coming out of the *khalwa*: filled with the emanations of divine attributes, his own personality has disappeared and mingles with the being of God. One of the two sacred books of the Yazīdīs is called *Kitāb al-Djilwa*; it is attributed to the Shaikh 'Adī b. Musāfir, who composed it in 558 = 1163 (R. Frank, *Sheich 'Adî*, a dissertation of the University of Erlangen: Kirchhain 1911, p. 40).

Bibliography: Guys, *Un derviche Algérien*, p. 203.

(CL. HUART.)

DJILWATĪ, a religious order founded by Muḥammad Djilwatī, called Pīr Uftāda, a pupil of Ḥādjdjī Bairam, who died at Brussa, his native town, in 988 (1580). Their cloth turban has eighteen folds and they wear their hair long. The mother-house is at Brussa, near the mosque of the citadel in which the founder is buried.

(CL. HUART.)

DJĪM, the name of the fifth consonant in the Arabic alphabet; its numerical value is 3. The letter *djīm* denotes, according to the dialect, perceptibly different sounds, whose area of articulation extends from the soft palate to the front of the hard palate.

It is generally agreed that the sound originally denoted by *djīm* must originally have been *g*, that is a voiced post-palatal velar, corresponding to the Hebrew *gimel*, the Aramaic *gāmal* and the Ethiopic *gaml*. But it is probable that at quite an early period, this sound evolved from closed to half closed and to a pure aspirate; this tendency probably first appeared in cases where the *djīm* was in contact with a palatal vowel. In any case, from the traditional pronunciation of readers of the Ḳor'ān, from the rather confused descriptions of the articulation of *djīm* in the older grammarians, and from the modifications of this articulation, brought about by the proximity of other sounds (assimilations and dissimilations), it is safe to conclude that since the dawn of the classical period, the closed *g* of *djīm* has been opened, in certain dialects at least, by palatisation, affrication or even complete aspiration. There must of course have been similar differences to those that exist in modern dialects, in the pronunciation of *djīm* in ancient dialects; some of them may be assumed to have advanced farther than others towards aspiration. Besides, this evolution is still going on at the present day in certain dialects; at Jerusalem, for example, a European observer has noticed that the affricated *dj* which he used to hear for *djīm* in his childhood, had become in the usual pronunciation *ž* (cf. Littmann, *Neuarabische Volkspoesie*, p. 3 note 1). In certain dialects where the pronunciation of *dj* now in vogue is *ž*, dissimilations to *d* or *g* cannot be explained as survivals from an earlier but less ancient stage of evolution of this consonant (Brockelmann, *Grundriss*, i. 235-236).

We may then trace the following main pronunciations of *djīm* in modern dialects.

1. The original pronunciation of *g*, as a voiced post-palatal velar closed sound was still in use at 'Aden in the middle ages (cf. Muḳaddasī, p. 96, l. 14). It is found at the present day in Muscat, and in various Beduin dialects of Central Arabia. It is also the pronunciation of *djīm* peculiar to the dialects of Lower Egypt, particularly that of Cairo. At Ḏofār (in the southeast

of Arabia) this pronunciation is no longer found except in the recitation of poetry; its character therefore is archaic and almost artificial. In Dathīna (in the southeast of Arabia) it is found in the conjugation of verbs whose first radical is *djīm*, when this radical forms a syllable with the prefixes. Finally in the great majority of the dialects of Northern Morocco and also at Nedroma (Algeria) *g* is, by dissimilation, the pronunciation of *djīm* when followed by a sibilant (*s* or *sh*).

2. In various dialects, the original *g* has passed by palatalisation to a sound almost equivalent to *gʸ* or *dʸ*, a medio-palatal pronounced by raising the middle part of the tongue; it is the pronunciation of *djīm* found in the majority of the Beduin dialects of North Central and South Arabia. It is also that of the Fellāḥ and Beduins of Upper Egypt and is sometimes found at Ḍofār.

3. When the original closed *g* has by palatalisation become *gʸ* or *dʸ*, the last stage of evolution is the medio-palatal spirant *y*, which is connected with the semivowel *i* and is often confounded with it. This pronunciation *y* of *djīm* is attested as dialectical by ancient grammarians and lexicographers. At the present day it is general in the region of the Lower Euphrates; it is the pronunciation most common in Ḍofār; it is frequent but not regular in various dialects of Southwest Arabia. In the dialects of North Arabia and other Arabian dialects, it can only be noted in a few sporadic cases.

4. In many dialects, the original *g* has passed by affrication to a sound almost equivalent to *dzh*, a pre-palatal pronounced with the tip of the tongue. This pronunciation for which we have evidence in the ʿIrāḳ in the golden period of classical literature (cf. *Zeitschr. für Assyriologie*, xiii. p. 126), is now found in certain places in Central Arabia. It is usual in Mecca, the ʿIrāḳ, among the Muslims of Jerusalem, at Aleppo and in the surrounding country. In North Africa, it is almost general in the rural and urban dialects of northern Algeria; it has survived at Tangier and perhaps at other places in Northern Morocco in cases of gemination (e. g. *ḳmīdja*, "lock of hair", but plur. *ḳʷāmesh*).

When the original closed *g* has become *dzh* by prepalatal affrication, the last stage of evolution is the prepalatal *zh*. This pronunciation of *djīm* is the one now in vogue in the towns of the Syrian coast, certain districts of Lebanon, Damascus, Mesopotamia and among the Christians of Jerusalem. In North Africa, it is found in the dialects of Tunisia, Tripolitania, Morocco and Southern Algeria; it is even found at certain places in Northern Algeria. It was probably the usual pronunciation of *djīm* in the Arabic of Granada.

6. Lastly it should be noted that in the towns of Northern Africa, there is a tendency in certain individuals to pronounce *zh* almost as *z* by the insertion of the trill characteristic of *z*. This tendency seems limited to certain social groups (Jews), or to certain classes of society (the lower classes of Northern Morocco) and is not general enough for it to be called anything but an individual peculiarity.

(W. Marçais.)

DJIMAT (Malay) an amulet, more particularly a written amulet. The word is of Arabic origin = *ʿazīma*. (See the article ḤAMĀʾIL).

DJINĀS (A.), also *tadjnīs*, a technical term in Rhetoric, "Assonance", "Paronomasia", "Pun". On the various kinds of this figure often used in poetical works, cf. Mehren, *Die Rhetorik der Araber*, p. 154—161, and Garcin de Tassy, *Rhétorique et Prosodie des Langues de l'Orient Musulman*, p. 120 *et seq.*

DJINN. The Djinn for Muslims are airy or fiery bodies (*adjsām*), intelligent, imperceptible, capable of appearing under different forms and of carrying out heavy labours (Baiḍāwī on Ḳurʾān, lxxii, 1; Damīrī, *Ḥayawān*, sub voce). They were created of smokeless flame (Ḳur. lv, 14), while mankind and the angels, the other two classes of intelligent beings, were created of clay and light. They are salvable; Muḥammad was sent to them as well as to mankind; some will enter the Garden and some will be cast into the Fire. Their relation to Iblīs, *the* Shaiṭān, and to the Shaiṭāns in general, is obscure. In Ḳur. xviii, 48, Iblīs is said to be of the Djinn; but Ḳur. ii. 32 implies that he is of the angels. In consequence there is much confusion, and many legends and hypotheses have grown up, see the latter passage in Baiḍāwī and in Rāzī's *Mafātīḥ* (i. pp. 288 *et seq.* of Cairo ed. of 1307). The native lexicographers tend to explain the name *djinn* from *idjtinān*, "becoming concealed, hidden," (see Lane, s. v. and Baiḍāwī on Ḳur. ii. 7; Fleischer's ed. i. p. 22, l. 15). But this etymology is very difficult, and derivation as a loan-word from *genius* is not quite excluded. "Naturalem deum uniuscuiusque loci" (Serv. Verg. G. i. 302) exactly expresses the strong localisation of the Djinn (cf. e. g. Nöldeke, *Moʿallaḳāt*, i. pp. 64, 78 and ii. pp. 65, 89) and their quasi-standing as deities in old Arabia (Robertson Smith, *Rel. of Semites*[2], p. 121). An individual is a *djinnī*; *djānn* is used synonomously with *djinn* (but see Lane, *Lexicon*, p. 492 c); *ghūl*, *ʿifrīt*, *siʿlāt* are classes of the Djinn. For an Ethiopic point of contact with *djānn* see Nöldeke, *Neue Beiträge*, p. 63.

Consideration of them divides naturally under three heads, though these necessarily shade into one another.

I. The Djinn in pre-Islamic Arabia were the nymphs and satyrs of the desert, the side of the life of nature still unsubdued and hostile to man. For this aspect, see Robertson Smith, *loc. cit.*; Nöldeke on ancient Arabs, in Hastings' *Encycl. of Rel. and Ethics*, i. pp. 669 *et seq.*, Wellhausen, *Reste*; van Vloten, *Dämonen . . . bei d. alt. Arabern*, in *Wiener Zeitschr. f. Kunde des Morgenl.* vols. vii. and viii. — see materials in Djāḥiẓ, *Ḥayawān*. But in the time of Muḥammad they were passing over into vague, impersonal gods. The Meccans asserted a kinship (*nasab*) between them and Allāh (Ḳur. xxxvii, 158), made them partners of Allāh (vi. 100), made offerings to them (vi. 128), sought aid of them (lxxii, 6). See further under Allāh, p. 302 above.

II. In official Islām the existence of the Djinn

was completely accepted, as it is to this day, and the consequences were worked out to the end. Their legal status in all respects was discussed and fixed, and the possible relations between them and mankind, such as in marriage and property, were examined. Stories of the loves of Djinn and mankind were evidently of perennial interest. The *Fihrist* gives titles of sixteen of these (p. 308) and they appear in all the collections of short tales (e. g. *Tazyīn al-aswāḳ*, by Dāwūd al-Anṭākī, pp. 181 *et seq.* of ed. of Cairo, 1308; *Maṣāriʿ al-ʿushshāḳ* by al-Sarrādj, pp. 286 *et seq.* of ed. of Constantinople, 1301). There are many stories, too, of relations between saints and the Djinn; see the present writer's *Religious Attitude and Life in Islām*, pp. 144 *et seq.* A good compilation on all this is the *Ākām al-mardjān fi aḥkām al-djānn* by Badr al-Dīn al-Shiblī (d. A. H. 769; Cairo, 1326); see, too, Nöldeke's review in *Zeitschr. d. Deutsch. Morgenl. Gesell.* lxiv., pp. 439 *et seq.* Few, even of the Muʿtazilites, ventured to doubt their existence and only constructed different theories of their nature and working on material things. The earlier philosophers, even al-Fārābī, tried to avoid the question by dubious definitions. But Ibn Sīnā, in defining the word, asserted flatly that there was no reality behind it. The later believing philosophers used subterfuges, partly exegetical and partly metaphysical. Ibn Khaldūn, for example, reckoned all references to the Djinn among the *mutashābih* passages of the Ḳorʾān, the knowledge of which Allāh has reserved to himself (Ḳur. iii. 5). These different attitudes are excellently treated in the *Dict. of Techn. Terms*, i. pp. 261 *et seq.*, cf., also, Rāzī, *Mafātīḥ*, Sūra lxxii.

III. The Djinn in folk-lore. The transition to this division comes most naturally through the use of the Djinn in magic. Muslim theology has always admitted the fact of such a use, though judging varyingly its legality. The *Fihrist* traces both the approved and the disapproved kinds back to ancient times, and gives Greek, Ḥarrānian, Chaldean and Indian sources. At the present day, books treating of the binding of Djinn to talismanic service are an important part of the literature of the people. All know and read them, and the professional magician has no secrets left. In popular stories, also, as opposed to the tales of the professed littérateur, the Djinn play a large part. So throughout the *Arabian Nights*, but especially in that class of popular religious novels of which Weil published two in his translation of the *Nights*, the second version of "Djūdar the Fisherman" and "Alī and Zāhir of Damascus". Still nearer to the ideas of the masses are the Märchen collected orally by Artin, Oestrup, Spitta, Stumme etc. In these the folklore elements of the different races overcome the common Muslim atmosphere. The spirits appearing in them are more North African, Egyptian, Syrian, Persian and Turkish than Arabian or Muslim. Besides this there are the popular beliefs and usages, so far very incompletely gathered. All through these, also, there are points of contact with II. Thus, in Egyptian popular belief, a man who dies by violence becomes an *ʿifrīt*, and haunts the place of his death (Willmore, *Spoken Arabic of Egypt*[2], pp. 371, 374), while in the Islām of the schools a man who dies in deadly sin may be transformed into a *djinnī* in the world of al-Barzakh (*Dict. of techn. terms*, i. p. 265). Willmore has other details on the Djinn in Egypt. For south Arabia see "Abdullah Mansûr", *The Land of Uz*, pp. 22, 26, 203, 316—320. See too, R. C. Thomson, in *Proc. of Soc. of Bibl. Arch.* xxviii. 83 *et seq.*; Sayce in *Folk-lore*, 1900, ii. 388 *et seq.*; Lydia Einszler in *Zeitschr. d. Deutsch. Pal.-Vereins*, x. 170 *et seq.*; Mrs. H. H. Spoer in *Folklore*, xviii. 54 *et seq.*; the present writer's *Aspects of Islām*, pp. 326 *et seq.* But very much remains to be done.

(D. B. Macdonald.)

DJINS "genus, class", a collective term more comprehensive than "kind" or "species" (*nawʿ*). It is the first of the five general terms of logic which are: genus, species, difference, property and accident. The genus includes several species. In the hierarchy of genera and species, we arrive, in ascending order, at a genus which has no genus above it; this is called the "genus generum"; it is the most universal; in descending order, we reach a species which has no species below it; it is the "species of species", the one that most closely approaches the individual.

The Arab philosophers also give the name *djins* to the Categories of Aristotle; they call them the "Ten *Adjnās*"; this name is synonymous with that of *maḳūlāt*. The account of the genus and species in Arab logic is derived from the Isagogy of Porphyry.

In metaphysics, the idea of species raised the question of its reality. This question, which is that of realism or nominalism, has not been discussed separately or methodically by Muslim philosophers; but it is touched on in many of their works. Fārābī sets himself the question, whether the individual or the species is the more real, and which of the two has the better claim to the name "substance" (cf. the article Djawhar, p. 1027). The answer varies according to the point of view; in one sense the individual, because it exists, is more really substance than the genus or species which only exist in theory and which can only be realised through the individual; but from another point of view, species and genera are the first substances, because they are fixed, permanent, subsistent while the individuals are perishable.

The "Ideas" of Plato in Muslim philosophy are not regarded as being the species themselves; they are spiritual types of the species, really existing in themselves, in opposition to the species which exist only in the individuals and are almost comparable to spirits or angels. There is a world in which the ideas reside but there is not a world for the species (cf. also the article ṢŪRA).

(Carra de Vaux.)

DJIRDJIS, St. George. Islām honours this Christian martyr as a symbol of resurrection and

renovation; his festival marks the return of spring.

The legend of St. George had become syncretic long before the days of Islâm, for we can recognise in St. George overthrowing the dragon, a continuation of Bellerophon slaying the Chimaera. Bellerophon himself was symbolic of the Sun scattering the darkness or of spring driving away the mists and fogs of winter.

The St. George of Islâm is closely connected with the prophets Khiḍr and Elias; this festival falls on the 23rd April. Islâm holds this day sacred to Khiḍr and Elias under the popular name of *Khiḍrellez*. In the Ottoman empire it used to be a fixed date on which certain civil or military operations were carried out; for example, the departure of the squadron which used to cruise in the islands of the Archipelago, the departure of the horses of the imperial stables to the grazing-grounds, the assumption of summer livery by the *Čoḳadar* of the seraglio and the court. In fact it was the day on which summer began.

According to Muslim legend, St. George was martyred at Mosul under Diocletian; during his execution the saint died and was resurrected three times. The legend is found in a considerably developed form in the Persian version of Ṭabarî and always with the same motif; it is simply a series of deaths and resurrections. The saint makes the dead rise from the tombs; he makes trees sprout and pillars bear flowers; in one of his martyrdoms, the sky becomes dark and the sun only appears again after he has returned to life.

In the end St. George converts the wife of the monarch who was persecuting him; she is put to death. The saint then begs God to allow him to die and his prayer is granted.

(B. CARRA DE VAUX.)

DJÎSH, in classical Arabic Djaish (see Fränkel, *Aram. Fremdwörter*, p. 238) army. The word in Northwest Africa has however two further special meanings.

1. *Djîsh*, plur. *Djuyûsh* or *Djîyûsh* means in the south of Algeria and Morocco an armed band, which goes out on a *ghazw* (ambush for purposes of plunder or of a holy war) against a caravan or a body of troops. When the *djîsh* consists of several hundred men, it is called a *ḥarka*. The *Djîyûsh* carry on their operations from the Northern Sûdân or the Niger valley throughout the Sahara to the South of Algeria and Morocco. They are composed sometimes of Tuâregs but more often of Berbers from the southern slopes of the High Atlas. The latter assemble on the al-Maider plateau in the valley of the Wâd Gheris.

When the formation of a *djîsh* is decided upon, the Tuâreg who are to belong to it bind themselves together by an oath before setting out. Among the Ulâd Djarir on the borders of Algeria and Morocco two mounted marabouts are placed opposite one another. Between these two men of religion, run those intended for the foray, with a branch of the *retem* (Sahara broom) in their hand which they throw into the air. Each *djîsh* takes with him some one who is to bring him luck; this is usually a marabout or a warrior who has already taken a successful part in several similar enterprises.

In the sandy plains of the Sahara, or in the sand hills the members of the *djîsh* walk in Indian file so that the enemy cannot guess their number from their tracks. They also make all sorts of deviations. When they come to the place chosen for the ambush, they lie in wait. The attack is usually made by night or in the grey of morning. It is a fierce onslaught, a hail of shot mingled with the shrill wild yells of people shrieking like demons, while the rifles pour forth bullets. All the forces of the attacking party are concentrated on the first onslaught. The terrified animals can no longer be controlled and often stampede in all directions. Then begins the second part of the fight, in which the best horsemen of the *djîsh* play the principal part in driving their dismounted opponents into the desert to die. It is mainly to put down the *djîyûsh* that the French military authorities have instituted the corps of *Méharistes Sahariens*.

2. *Djîsh*, or according to the pronunciation in western Morocco *gîsh*, a kind of feudal organisation in the Moroccan Army.

Historical. The present *djîsh* dates from the beginnings of the reigning dynasty. Previously the various dynasties of North Africa had succeeded to power with the help of groups of the people whose political and religious interests were their own. Revolutions not only overthrew the ruling families but forced them to maintain their power by force of arms and spill their blood on countless battlefields. The great families, tribes and clans, who had accompanied the first ruler, became extinct. Lest they should become dependent on Berber clans, who could not be relied on to be faithful to a dynasty they had not created, the Sulṭâns had to surround themselves with foreign mercenaries, who had no connection with the Atlas territory. The older North African dynasties enlisted Christians, Kurds, Persians and negroes. Under the Banû Waṭṭâs, the Kurd, Christian and negro guards were abolished and replaced by a guard composed solely of Arabs (*al-Shurṭa*). This was composed mainly of the elements which had been introduced to West Morocco by the Almohad ruler Yaʿḳûb al-Manṣûr (Oulad Hassan, Shebanat, Kholoṭ etc.) or of Maʿḳil Arabs from the Tlemcen country (Soîd, Banû ʿÂmir, Sîdâʾîḥ, Riyâḥ, etc.). The latter were quartered in the environs of Fâs (Fez) and formed the corps of Sheraḳa (Orientals). The attacks of the Christians in the xvith century A. D. forced the ruler of Fâs to place garrisons in the strongholds on the coast and these were given the name *makhzen* (garrison placed in a town), which was very soon to be transferred to the whole feudal organisation of Morocco. But this *makhzen* succumbed to the attacks of the Portuguese and Spaniards, the rebellious

Berbers and those of a new Ma'ḳil makhzen, which had been formed by the Sa'did Sharifs of Sūs (1545).

When the Sa'dids had become lords of the kingdom of Fās, they quartered the Arabs of their *djish* in the garrisons of Fās, calling them the *Ahl Sūs*; they were soon afterwards transferred to the fortresses of the Gharb as a defence against the Kholoṭ Arabs of what had been the Marinid *djish*. They then united the remnants of the *djish* of the Banū Waṭṭās (Shabana, Zirara, Ulād Mta'a, Ulād Djerār) with their own and placed them in the garrisons of Tadla and Marrākesh. The Sherāḳa were also enlisted and remained in garrison in the neighbourhood of Fās. The Sa'did army, the *djish*, was thus created. As in the time of the Banū Waṭṭās, it consisted of military cantonments of members of the makhzen who were at the call of their sovereign throughout their lives. They lived on estates which formed a kind of fief and were free from taxation. The highest officials rose from their ranks.

But the Sa'did court became influenced by the Turks in the adjoining lands. In addition to the corps of *djish*, the Sharifs wished to have a corps drilled in the European fashion by Turkish instructors. The nucleus of this corps, consisting of Andalusian Moors, renegades and for the greater part of Sūdān negroes, was only of any real value in the reign of Sulṭān Aḥmad al-Dhahabī (al-Manṣūr). While this dynasty was breaking up in the civil wars caused by rival claimants for the throne, Sulṭān 'Abd Allāh b. Shaikh wished to have a body of faithful troops upon whom he could implicitly rely and gave the Sherāḳa most of the lands which they had previously only held in fief.

When Mūlāy al-Rashīd seized the throne in 1665 and with the help of Arabs and Berbers from the Udjda country founded the dynasty of Alid Sharifs which still survives, he amalgamated his retainers with the Sherāḳa of Fās. His successor Mūlāy Ismā'īl, the greatest ruler of Morocco, gave the Djish the character that it has retained to the present day. His mother belonged to the Arab tribe of Mgafra, a division of the Udāya. He invited this tribe to come from the other end of Sūs and settled them as a makhzen-tribe near the lands of the Sherāḳa of Fās. He reorganised the negro contingent the members of which he had sought out with the help of the Sa'did Sulṭān Aḥmad al-Manṣūr's register. They had to swear an oath of fealty on the Imām al-Bukhārī's book; whence their name *'Abīd Bukhārī* (slaves of Bukhārī, plur. *Buākhir*). The *djish* further consisted of the *Sherāḳa* (Ulād Djama', Hawāra, Banū 'Amir, Banū Snūs, Sedjā'a, Ahlāf, Saïd, etc.), the *Sherarda* (Shabana, Zirāra, Ulād Djerār, Ahl Sūs, Ulād Mta'a etc.), the *Udāya* (the Udāya proper, Mgafra etc.) and *Buākhir*. These were the four makhzen-tribes and together formed the *djish*. Henceforth the history of the *djish* is that of the domestic history of Morocco; indeed it may be said that their history is that of the revolutions of Morocco. In the reigns of Mūlāy Ismā'īl's successors, it was the *djish* that decided the fate of the rulers. The four great tribes acted just as suited their individual interests. From 1726 to 1757, in the brief space of 31 years, 14 Sulṭāns were enthroned, and deposed or slain by them, in consideration of the presents (*mūna*) they received. In 1757 on the death of Sulṭān 'Abd Allāh b. Ismā'īl who had himself been seven times deposed and restored again, his son Muḥammad succeeded him. Under his iron rule, the *djish* tribes were kept under control. He broke the power of the Buākhir, by dividing them up and sending them to garrison the various seaports. To counteract the influence of the Sherarda of Tadla and the plain of Marrākush, he enlisted sections of the tribes of this plain in the makhzen — Mnabeha, Rehamna, Abda, Aḥmar and Harbil — Each of these tribes had to send two Ḳā'ids and their retainers to the *djish*. These detachments were released from their tribes, entered the makhzen of Marrākesh, to which they belonged, received the pay of other troops and were freed from taxes.

Under Sulṭān Yazīd, son of Muḥammad, insubordination again broke out, favoured by the weak character of the ruler. He was assassinated and the struggles for the throne of Morocco began again, which became the plaything of the *djish* tribes. Finally about 1791, Mūlāy Slimān succeeded in winning his way to the throne and overthrowing his rival Mūlāy Hishām, who had been chosen in Marrākesh. While he was on a campaign against the Berbers in the south, the Sherarda aroused a great rebellion against him. The Udāya took his side against the rebels and seized the opportunity to plunder Fās. Mūlāy Slimān was victorious but on his death his successor Mūlāy 'Abd al-Raḥmān was proclaimed Sulṭān by the Udāya in 1822. The latter was almost overthrown by another rising of the Sheraeda and had as a rule to reside in Marrākesh, the better to be able to control the tribes. But events in the north of his kingdom, a rising of the Udāya, the conquest of Algiers by the French and the wars of his representative 'Abd al-Ḳādir against them, forced him to retire to Fās. He wished to take the field in person against the French. But after his defeat at Isly, he recognised how unequal to European armies his *djish* was, and resolved to have an army modelled on those of Europe. His successor Muḥammad carried out this plan by his edict of the 22nd Radjab 1277 (18th July 1861). The organisation of the new army was after many experiments finally entrusted to a body of French officers.

Present State of the Djish. The *djish* at the present day still consists of the Sherāḳa, Sheraeda, Udāya and Buākhir with the half makhzen-tribes of the plain of Marrākesh ('Abda etc.). The tribes still have only the use of the lands occupied by them, except the Sherāḳa, who have obtained the cession of most of their lands; and the Buākhir almost all of whom have land around Mekinas (Miknāsa). The *djish*-tribes are divided into regiments of 500 men (*raḥa* [*ra'īl*]). At the head of each *raḥa* is a *Ḳā'id raḥa*, a kind of colonel. Below him are five *Ḳā'id al-mi'a*, commanders of 100 men, each of whom have 5 *muḳaddam* below them, who are subordinate officers commanding 20 men. The private soldier of the *djish* is called *mokhāznī*.

The members of the *djish* can attain to the highest positions in the Makhzen. The Buākhir still retain a special privilege: from their ranks alone are drawn the *Sharrdet*, a kind of pages, who are employed in the palaces of the sovereign. The Udāya have the right to call themselves *Uncles of the Sulṭān*. The tribes belonging to the *djish* are each commanded by a Pasha, except

the Sherarda and Udāya, who are divided into garrisons, each of which is commanded by a Ḳā'id. The Pasha of the Bu̲kh̲ir is also Pasha of Mekinez and the Pasha of the Ahl Sūs is also Pasha of Fās Djadīd. All officers are supposed to live in their garrison towns but in time of peace they do not strictly observe this rule. Their military duties are not taken very seriously and most of them live on their estates. The administration of the affairs of the tribe is in the hands of the s̲h̲aik̲h̲, the oldest of the ḳā'id raḥa.

When the Sulṭān requires troops each Makhzen-tribe sends a detachment corresponding to the number of its raḥa. This holds for the Sherāga, Sherarda and Udāya, all of which consist of too many families for them to belong in a body to the djīsh. The families who are to be detached are chosen by drawing lots. The others are free, though they pay no taxes and till the lands granted them for the time. They form the reserve of the djīsh, from which the Sulṭān draws the corps of mokhaznia (muleteers, army service corps) for the 'askar (regular army) and for the artillery. Each member of the djīsh called to the colours receives in his garrison an allowance of rations (muna) and a monthly pay (rateb).

The Bu̲kh̲ir, who now number only 4000 men, and the Ahl Sūs are all soldiers. A special register is kept of them. They all receive the munā and the rateb and their widows also receive pensions.

Positions in the djīsh often descend from father to son and their holders thus form a permanent element in the Makhzenemte.

Although the creation of a standing army on the European model, the 'askar, has lessened the influence and political importance of the most prominent members of the djīsh, it has by no means destroyed its military value. The fact that they are peerless horsemen is largely due to the la'b al-barūd "powder-game", in which the djīsh excell. The field artillery of the standing army is also recruited from them. Trained by the French officers, sent for this purpose, this artillery has acquitted itself excellently.

As we have already seen, the djīsh is divided into raḥa and these are commanded by a ḳā'id, below whom are five ḳā'id mi'a with their muḳaddam. The standing army on the other hand is divided into tabors (battalions or regiments) of varying strengths; these are commanded by a ḳā'id raḥa who has a k̲h̲alīfa and a corresponding number of ḳā'id mi'a below him.

Distribution, Armament and Dress. The djīsh-troops are unequally distributed among the four cities Fās, Mekinez, Rabāṭ and Marrākush in which Sulṭān has residences, the two seaports, Tangier and Larash and a few small garrisons in the G̲h̲arb (west), east and south of Morocco. In these places the djīsh and their people live by themselves and hardly mix with the natives by whom they are feared.

At present these horsemen are armed with the Winchester rifle, which has supplanted the long flintlock; they also carry the sekin, a sword with an almost straight blade, a horn handle and a wooden sheath covered with red leather. They also carry the kummiya and the k̲h̲andjar, engraved daggers with very curved blades. Their horses as a rule, are good, but the harness as usual among the Arabs, is very poor.

They wear a cloth kaftan of some loud colour over which they put a white farad̲j̲iya, the whole being held together by a leather girdle with silk embroidery. Their red s̲h̲ās̲h̲iya is conical in shape and wound round by a turban of white muslin. Soft slippers of yellow leather with long spikes instead of spurs complete this picturesque outfit.

(A. COUR.)

DJISM, the body. The study of bodies is the subject of physics. Avicenna devotes the second part of his *Nadjāt* to the notion of a physical body, in which the Peripatetic doctrine may be recognised. All bodies in nature consist of matter as place or support and a form which dwells in the matter, as for example the form of a statue has its abode in iron. Forms have three dimensions, i. e. they stretch in three directions cutting themselves at right angles. Matter does not have these dimensions by its nature; but it is disposed to receive them. In the matter of physical bodies there are other forms than corporeal forms, they are those which are relative to categories, quality, situation. Bodies have certain primary qualities, without which they cannot exist and secondary qualities the absence of which does not destroy them but affects their integrity. They do not move of themselves, but only by forces superimposed on them: either forces which keep them in their state or position like weight or forces which develop them like the vegetative spirit, or in the case of the stars the spirits that animate the spheres. Bodies are simple or composite; those that are simple have not any actual parts but to the mind they are divisible *ad infinitum*. Several other ideas are closely connected with the idea of body; these are movement and rest, time and place, vacuity, finity and infinity, contact and adherence, continuity or succession. These various notions have given rise to celebrated disputes among philosophers. The primary bodies of which the others are composed are the four elements: fire, water, air and earth, which are respectively hot and dry, moist and cold, moist and warm, dry and cold. The celestial bodies are incorruptible, the others on the other hand are produced and destroyed.

The Mutakallim-theologians, who are for the most part atomists do not agree with the philosophers that bodies are composed of matter and form; they are rather composed of atoms without extent, which by their union form extent. Bodies for them are not continuous nor infinitely divisible, and the heavenly have not a different nature from earthly bodies (cf. the article DJAWHAR, p. 1027 et seq.).

The idea of body appears in theology in connection with God; indeed the Ḳor'ān often speaks of God as if he had a body, saying that he sees, hears, speaks, and is seated on a throne. Certain scholars have consequently held that the word body could be applied to God; but orthodox theologians, like al-As̲h̲'arī have combatted this an-

thropomorphic idea and taught that these expressions only designate qualities of the divine being which it is not always possible exactly to define.

In eschatology also, questions of the same kind arise: are the bridge of hell, the balance and the judgment-trump, corporeal bodies? The answer given by orthodox theology is that these objects really exist but that they are not bodies in the ordinary sense of the word.

(B. CARRA DE VAUX.)

DJISR, plural *djusūr* (A.; cf. Fränkel, *Aram. Fremdwörter im Arabischen*, p. 285), "bridge", is more particularly, though not by any means exclusively, a bridge of boats in opposition to *al-ḳanṭara*, an arched bridge of stone.

An incident in the history of the conquest of Babylonia has become celebrated among the Arab historians as *yawm al-djisr* "the day of the fight at the bridge": in 13 A. H. Abū ʿUbaid al-Thaḳafī was defeated and slain in battle against the Persians at a bridge across the Euphrates, near Ḥīra; cf. Wellhausen, *Skizzen und Vorarbeiten*, vi. 68 *et seq*., 73; Caetani, *Annali dell' Islam*, iii. 145 *et seq*.

DJISR BANĀT YAʿḲŪB the "bridge of Jacob's daughters", a bridge across the Jordan south of the Baḥrat al-Ḥūla, where the *via maris* from Damascus to Ṣafed and ʿAkkā crossed the river.

This trade route began to become of greater importance in the Crusading period; it is therefore not surprising that the passage of the river here was often fiercely fought. In 552 (1157) the Franks were defeated by Nūr al-Dīn at Jacob's ford. In 573 = 1178, Baldwin IV. built a fortress here on the right bank at the *Bait Yaʿḳūb* near the *Makhāḍat al-Aḥzān* ("ford of lamentations"), which according to Yāḳūt, i. 775, took its name from the fact that Jacob lamented for his son Joseph here; it was soon afterwards destroyed by Ṣalāḥ al-Dīn in 575 = 1179 and pilgrimages were resumed to the *Mashhad al-Yaʿḳūbī* (Ibn al-Athīr, ed. Tornberg, xi. 301; Abū Shāma in *Recueil des Hist. des Crois.*, Or. iv. 194 and 203 *et seq.*; cf. also Rey, *Les Colonies Franques de la Syrie*, p. 438).

Dimashḳī (ed. Mehren, p. 107) mentions a "Jacob's Bridge" (*Djisr Yaʿḳūb*), which crossed the Jordan here. In the ixth (xvth) century a merchant of Damascus built a *khān* at this spot (*Journ. As.*, ixth Ser. vi. 262). The road continued to remain the main route to Damascus from the west in the centuries following and we therefore find the bridge regularly mentioned in the itineraries of eastern as well as western travellers, by the name it still bears, the "bridge of Jacob's daughters" (djisr banāt Yaʿḳūb, djisr Yaʿḳūb, pons Jacob, Yaʿḳūb köprü; cf. *Zeitschrift der Deutsch. Morgenl. Ges.*, lxiv. 694—700).

The strategic importance of the bridge was emphasised in modern times when in 1799 the French troops advanced up to it.

According to Baedeker, *Palestine*[7], p. 247 the present bridge dates from the xvth century. Not far from it the tomb of Jacob's daughters is venerated and a little farther to the south a few remains of the castle of the Crusading period may still be seen.

(R. HARTMANN.)

DJISR AL-ḤADĪD "Iron Bridge", a bridge over the Orontes on the road from Ḥalab via Ḥārim to Anṭākiya. In the Crusading period this bridge, which was of great strategic importance and is mentioned in earlier literature, is described as defended by two strong towers. The defences of the bridge were, from the battles of the Crusaders around Anṭākiya to modern times, the scene of much fighting. A small village has grown up beside the bridge.

Bibliography: Rey, *Colonies Franques de la Syrie*, p. 339; Abu 'l-Fidā (ed. Reinaud), p. 42; Ritter, *Erdkunde*, xvii. 1641; Petermann, *Reisen*, ii. 365; Sachau, *Reise in Syrien*, p. 461; M. Hartmann in the *Zeitschr. der Ges. für Erdk.*, xxix. 504.

DJISR AL-SHUGHR, the capital of a ḳaḍā in the sandjak of Ḥalab, S. E. of the two fortresses al-Shughr and Bakās, frequently mentioned in the Crusading period, on the Orontes, where the road from Ḥalab to al-Lādhiḳiya crosses the river. The name is not found in the Arab geographers; Abu 'l-Fidā (ed. Reinaud, p. 261) mentions the bridge of Kashfahān, east of al-Shughr, where a weekly market was held; we ought therefore — with M. Hartmann — to identify Djisr al-Shughr with Tell Kashfahān (cf. Yāḳūt, i. 869), where in 584 = 1188 Ṣalāḥ al-Dīn encamped before taking the adjoining fortresses. The village which comprises about 600 houses had still quite recently a Monday market, on which account it was loosely called Bāzār.

DJĪWAN, MULLĀ, whose real name is AḤMAD B. ABĪ SAʿĪD B. ʿABD ALLĀH was born in Amaithī, in the neighbourhood of Lucknow. He studied with eminent ʿulamāʾ of his country but completed his courses with Mullā Luṭf Allāh of Djahānābād. His piety and learning induced the Emperor ʿĀlamgīr (1069—1118 = 1659—1707) to appoint him as his teacher and the Mullā enjoyed his favour as long as the Emperor lived. His son, the Emperor Shāh ʿĀlam, also (1119—1124 = 1707—1712) had a great regard and respect for him. He went to the Ḥidjāz where the ʿulamāʾ of Madīna read al-Nasafī's *Manār Al-Anwār* with him and requested him to write a commentary on it. So he acceded to their request and wrote his famous work, mentioned below. After returning from the pilgrimage he spent all his life in teaching and delivering lectures to the students. He died in Dihlī in 1130 = 1717.

He is the author of the following works:

1. *al-tafsīrāt al-aḥmadiya fī bayān al-āyāt al-sharʿiya* (Rampur Library, p. 24; printed, Calcutta A. H. 1263);

2. *Nūr al-anwār*, a commentary on al-Nasafī's treatise on the principles of Muḥammadan jurisprudence, according to the Ḥanafī school (Bankipur Library, p. 826; Rampur Library, p. 280; Lith. Ind. Off., No. 316; printed repeatedly: Calcutta A. D. 1818, Lucknow A. H. 1266, A. H. 1279, Cawnpore A. H. 1299).

Bibliography: Āzād al-Bilgrāmī, *Subḥat al-Mardjān*, p. 79; Ṣiddīḳ Ḥasan, *Abdjad al-ʿUlūm*, p. 907; Nawāb Khān, *Maʾāthir al-Umarāʾ*, iii. 794; Faḳīr Muḥammad al-Lāhūrī, *Ḥadāʾiḳ al-Ḥanafiya*, p. 436; ʿAbd al-Awwal, *Mufīd al-Muftī*, p. 135. (M. HIDAYET HOSAIN.)

DJIZYA (A.) "tribute, poll-tax", the name given in Muḥammadan Law to the indulgence-taxes levied on the *ahl al-dhimma*.

1. The Theory of the *djizya* in the Fiḳh.

In the Fiḳh-books, the *djizya* is discussed in connection with the holy war (*djihād*, q. v., p. 1041 *et seq.*). While pagans only have the choice between Islām or death, the possessors of a scripture (*ahl al-kitāb*) may obtain security and protection for themselves, their families and goods by paying the *djizya*. This dogma is founded on Ḳorʾān ix. 29, where it is laid down: "Fight them, that believe not in God and the last day and who hold not as forbidden what God and his apostle have forbidden, and do not profess the true religion, those that have a scripture, until they pay the djizya in person in subjection". Relying on this passage the Fiḳh regards the *djizya* as an individual poll-tax, by payment of which Christians, Jews, Magians, Sabeans or Samaritans make a contract with the Islāmic community, so that they are henceforth not only tolerated but even have a claim for protection. Certain Christian groups, like the Banū Taghlib and the Christians of Nadjrān occupy a special position and do not pay *djizya*. Only adult males in the full possession of their physical and mental faculties and having the means to pay are liable to the tax. Women, children and old men are exempted, as war is not waged on them. Blind men and cripples only pay when they are wealthy; poor men and beggars are not expected to pay. Monks are exempted, if they are poor. But if their monasteries are wealthy, the superiors have to pay the tax. Slaves also are exempted. Alongside of this mild treatment of the poor and weak, there is a corresponding strictness with the wealthy and care is to be taken that no one who ought to pay escapes. Collectors are therefore particularly warned not to levy round sums on communities on a basis of their numbers alone. How to deal with the tax in the case of a *dhimmī* who becomes a convert to Islām, or one who dies in the current exchequer-year is a question of *ikhtilāf*.

The *djizya* should be paid in money but it may be paid in kind, e.g. in garments, cattle or even needles, but wine, and cattle that have died a natural death (*maita*), are not legal payment; the proceeds of their sale may however be taken. The normal tax at first was 1 dīnār. This later became the minimum. In countries where the standard was a silver one, it was the equivalent, 12 dirhams. For *dhimmīs* [q. v. p. 958b] in better circumstances the tax was next placed at 2 dīnārs or 24 dirhams, and for rich 4 dīnārs or 48 dirhams. According to Abū Yūsuf, from whom most of these facts are taken, money-changers, dealers in cloths, landowners, merchants and physicians were considered rich, while artisans such as tailors, dyers, cobblers and shoemakers were counted poor; he gives no details of the middle class. If a man could not pay his *djizya*, he was not to be forced to do so by corporal punishment (flogging, exposure in the sun, soaking with oil) but only by imprisonment. According to the verse which introduced it, the *djizya* was to be paid "in submission" (*wahum ṣāghirūn*), which al-Shāfiʿī, no doubt correctly, explained as to the dominion (*ḥukm*) of Islām, which the dhimmīs were under. Others, on the authority of this passage, demanded a very humiliating method of paying it and it is most probable that the degrading prescriptions regarding dress etc. are only interpretations of this passage. The income from the *djizya* was paid into the state treasury (*bait al-māl*, q. v., p. 598 *et seq.*) and with that from the *kharādj* [q. v.] the land-tax, formed the revenue from the *faiʾ* [q. v.] which belonged to the whole community.

2. The History of the conception of Djizya in Practice.

Djizya originally meant the collective tribute levied on conquered lands. The Arabs every-where left the administrative conditions which they found, unchanged and regarded the revenues of the provinces as their *djizya*. The distinction which later became usual between *djizya* as a poll-tax and *kharādj* as a land-tax did not at first exist, for our authorities frequently speak of a *kharādj* from a poll-tax and a *djizya* from land. The revenue from the *faiʾ* is even quite usually called *djizya* in allusion to the passage quoted from the Ḳorʾān. For example, in the Egyptian papyri of the first century A. H. besides the *djizya* (δημόσια) as the principal tax in gold, only the payment in kind is mentioned, which cannot be discussed here. According to the Arab view, this *djizya* was a poll-tax; for on the conclusion of treaties of occupation, a hypothetical number of inhabitants and not the area of arable land was taken as the basis for estimating the tribute. Now a poll-tax existed before the conquest in the conquered lands, Sasanian and Byzantine (ἐπικεφάλαιον, ἀνδρισμός) but the main source of revenue and hence of the tribute was the land-tax, which bore the Aramaic name of *kharāgā*. This term was identified with the Arabic *khardj* or *kharādj* (Ḳorʾān, xviii. 93; xxiii. 72) and from the ʿAbbāsid period was in general use in the non-Aramaic provinces also. *Kharādj* as "revenue", "income from land-tax" is interchangeable with *djizya*, even in the oldest literature that has survived to us. If it was the income from the tribute that was emphasised, it was called *kharādj*, but if one were thinking more of the tribute paid by those who had been conquered by Islām, the Ḳorʾānic expression *djizya* was used. With the consolidation of Arab power *kharādj* gradually became the term applied to the land-tax, which with the gradual conversion to Islām of the subjected peoples came to be levied on Muslims also, and thus lost its tribute (*djizya*)-character. The Ḳorʾānic *djizya* was replaced by the individual poll-tax which Islām found already in existence and which was of course levied on non-Muslims only. In the early literature and in Egyptian receipts for the payment of the poll-tax the term *djāliya* (plur. *djawālī*) was used, which became synonymous with *djizya*. This *djāliya* or *djizya* was counted *li-kharādj*, of this or that year, because the total income from the *faiʾ* was also called *kharādj* (cf. KHARĀDJ). Thus in the course of a century and a half arose the terminology of *kharādj* and *djizya*, although the Fiḳh treats them as having existed from the beginning.

On the practice in ancient times we really have only satisfactory information as to the custom in Egypt. After payment one was given a lead-seal round the neck, but the Caliph Hishām introduced regular receipts called *barāʾa*'s. Numbers of these have survived but they have not yet been thoroughly investigated. Egypt is said to have had levied on it at the conquest a tax of 2 dīnārs a head and as a matter of fact according to the

Greek taxation-rolls of the end of the first century, the totals give this as an average; but much smaller amounts are found. For later centuries it is evident from the receipts that in practice the minimum of 1 dīnār, prescribed by the fiḳh, was often very much smaller. In the first century however many persons were entirely exempt from taxation, though we do not know why; there is still much to be explained on the whole subject. The monks were strictly compelled to pay *djizya* in Egypt from the time of ʿAbd al-ʿAzīz, the brother of ʿAbd al-Malik, although they had apparently been previously exempted.

With the gradual adoption of Islām, the *djizya* as purely a poll-tax gradually declined and by Saladin's time the revenue in Egypt from this source was only 130,000 dīnārs (Maḳrīzī, *Khiṭaṭ*, I, 107, ₂₂; 108, ₂₂). Nevertheless this tax, levied as a sign of their subjection on the non-Muslim citizens of the second class, remained a permanent institution. We only have exact details for Turkey; these have been collected by Heidborn, *Les Finances Ottomanes* (Vienne-Leipzig 1912), p. 23 *et seq.* from v. Hammer and other sources (There is a reproduction of a Turkish receipt for *djizya* in Karabacek, *Führer durch die Ausstellung der Papyrus Erzherzog Rainer*, p. 176). *Djizya* existed in Turkey down to the time of the Crimean War. By the law of 10th May 1855 (F. Bamberg, *Geschichte der oriental. Angelegenheit*, p. 263), the *djizya* as a tax on the free exercise of religion was replaced by a tax for exemption from military service. The last trace of it only disappeared after the Revolution in Turkey since when Christians also do military service.

(C. H. Becker.)

DJŌDHPŪR is the largest state in Rādjpūtāna, India, with an area of 35,000 square miles, and lies on the west border of that Province. It is a country of sand dunes and desert tracts, but produces fine millet crops with a very moderate rainfall. The state was founded by Rāṭhōr Rādjpūts after their defeat at Kanaudj by Muḥammad Ghōrī in 1194 A. D., the city of Djōdhpūr being founded later in 1459. Rao Māldeo, the ruler of Djōdhpūr, who gave but grudging aid to the Emperor Humāyūn, was attacked and defeated by Shēr Shāh in 1544, and again by the Emperor Akbar. His son, Udai Singh, gave his sister in marriage to the Emperor Akbar, and his daughter to Prince Salīm, afterwards Djahāngīr, and the Rāṭhōrs then became closely connected with the Mughal Emperors of Dihlī. Mahārādja Djaswant Singh (1638—1678) served in the wars on the deposition of the Emperor Shāhdjahān, was Viceroy in Gudjarāt and the Dakhan, and died at Djamrūd near Peshāwar. During the minority of his son, Adjit Singh, Awrangzīb attacked and sacked Djōdhpūr; this chief afterwards recovered the city, but was again besieged by the Saiyid brothers and compelled to give a daughter in marriage to the Emperor Farrukhsiyar (1713—1719). For two years from 1815 the freebooter, Amīr Khān, held possession of Djōdhpūr, after which the state came under the protection of the British Government. The Musalmans in the State number only 150,000, or 8$^{0}/_{0}$ of the population. The hill fort enclosing the palace towering above the city is one of the grandest in all India.

(H. C. Fanshawe.)

DJOFRA, an oasis in the Sahara, about 180 miles south of the coast of the Gulf of Sidra, and about 300 south-east of Tripoli, a valley in the form of an ellipse running from east to west, surrounded by hills rising to a height of 700 feet, viz. the Djabal Mashriḳ in the N. W., the Djabal Hōn and Djabal Waddān in the N. E., the Djabal Misṭr in the W. and the Djabal al-Soda in the S. A low ridge running from N. to S. cuts the valley into almost equal parts. Of the 1000 square miles of this valley, barely a twentieth is arable, and the whole of the remainder consists of calcareous sand traversed by clay and chalk and sebkhas.

The 6000 inhabitants of Djofra are found in three settlements, Sokna, Hōn and Waddān. Sokna in the centre of the oasis, although now much declined, still has about 3000 inhabitants. The wall that runs round the settlement, has 33 bastions and 7 gates, and is commanded by a ḳaṣba now in ruins. The houses are in part built of stone as in the coast towns and in part of unbaked bricks as in Fezzān. Around the town is a girdle of gardens to the irrigation of which great attention is paid. The majority of the population even at the present day only speak a Berber dialect.

Hōn about 15 miles N. E. of Sokna, is an unimportant market-town.

Waddān, 15 miles S. E. of Sokna, used to be the most important town in the oasis, to which it gave its name. Built on the site of a Roman town, whose walls the traveller Lyon thinks he has recognised, it was conquered by the Arabs immediately after their settlement in Egypt. Ibn Ḥawḳal (ed. de Goeje, p. 44 *et seq.*; *Descr. de l'Afrique*, transl. de Slane, *Journ. As.*, 1842, p. 164) tells us that in his time Waddān and the adjoining territory belonged to the province of Surt. This traveller as does Idrīsī at a later period, praises the fertility of the soil, the wealth of the settlements, the abundance of fruits, particularly of dates, which were superior in quality to those of Awdjila (q. v., p. 517). There was a busy trade, for Waddān was one of the stages on the road to the land of the negroes. The present inhabitants are Arabs of the tribe of Mudjair and, according to Nachtigal, include a great many of Shurfā.

At the beginning of the xixth century when Fezzān was ruled by a native Sulṭān, Waddān and the two neighbouring towns still retained their independence. They formed a kind of republic, in which the malcontents of Tripolis and Murzūḳ sought refuge. After the occupation of Fezzān by the Turks, the oasis of Djofra, although in the Mediterranean territory, was attached to this province and placed under a ḳāʾimmaḳām under the governor of Murzūḳ.

(G. YVER.)

DJOKYĀKARTĀ or Djokya, also Yogyākartā, the name of a sultanate in the centre of Java, with an area of 56,5 geogr. sq. m. and in 1905 a population of 1,110,814 Muslim Javanese, 5366 Chinese, 97 Arabs, 86 other Asiatic foreigners and 2342 Europeans; it is also the name of the residency including this sultanate and of the capital of both (1905: 79,567 inhabitants).

Djokyākartā, with the principalities of Paku Alam, Surākartā and Mangku Nēgoro, forms the so-called "Vorstenlanden", all that is left of the once great Javanese kingdom of Mataram, which arose (c. 1586) out of the ruins of the Hindu kingdom of Modjopahit, which was destroyed by the Muslim rulers on the coast in 1518. Under Sunan Ageng in the first half of the xviith century, it had extended over almost the whole of Java. Civil wars about the succession to the throne, the intervention of the Dutch East India Company and of other allies or enemies, like the Madurese and Makassars, finally brought upon the ruin of the kingdom and left it a dependency of the Netherlands. In 1755 it was divided into Djokyākartā and Surākartā.

It may be taken as typical of the despotic monarchies which used to exist in the Indian Archipelago, where Hindu influence had made itself strongly felt.

The Sultan grants the land to his subjects for cultivation on payment of a tax (*padjĕg*) of half the rice produced from the irrigated fields; from the middle of the xviiith century on, there was also paid a third of the rice from dry fields and of other produce. The ruler had farther the right to levy taxes arbitrarily on the occasion of a birth, circumcision, marriage, death, or the building of a house etc., in his family (*takēr turun*). Thirdly the people were obliged to render personal service to him (*pugawejan*). The holders of appanages receive from the rulers along with the land, the right to raise those taxes from those who live on it.

The government was carried on in name of the Sultan, by a regent or *pati*, who in Djokyākartā has always borne the title *danurejā*. He is appointed by the Sultan with the approval of the Dutch authorities, confirmed and paid by the latter. With the officers of state (*priyayi*) outside the *kraton* or royal town he forms the *kapatihan* or governing body and is the second in the kingdom. The crown prince, whose title is *pangēran adipati* forms with him the *kadipatin* in the *kraton*, which the members of the royal family has authority over. They live in the royal town, the *kraton* of the Sultan, which is surrounded by walls. The third governing body in the state is the *panguḷon* or Muḥammadan clergy.

In terms of the treaty with the Dutch government, the political power of the Sultan has been transferred to the Dutch authorities. Besides its political constitution as a residency divided into three assistant-residencies, the present arrangement of judicial institutions in the Sultanate best emphasises this fact. In 1839 a supreme court was instituted with the Dutch Resident as president and the Regent and other high Javanese officials as members; the powers of the previously important native Surambi (court of the clergy) and *Pradātā* (Criminal court) were transferred to it. In the same year a court for Europeans was instituted with the Resident as president and European members. The third native court, the *Balemangu*, for civil cases and agrarian suits among natives, survives in Djokyākartā to the present day. Since 1903 the administration of the penal code in Djokyākartā exclusive of the *kraton* and in the residencies outside the "Vorstenlanden", has been organised and thus transferred to European authorities.

In Djokyākartā as well as in the other "Vorstenlanden" we find the typical Javanese and his society; on the one side is a highly developed aristocracy around a royal house from which it has sprung and on which it is still quite dependent as a ruling official caste, on the other, the poverty-stricken masses, an agricultural population on a very low level, which regards the class that exploits it with awe and reverence. The most remarkable feature of Javanese society is the strict formality, observed to the smallest detail, which marks the intercourse of the latter with the former in all affairs. As a result of their environment, the parasitical nobility has not developed any serious conception of life nor any kind of activity but only the tendency to satisfy their passions; there is no inclination among the down-trodden and exploited people to raise themselves to a higher level; they are content if they obtain, by legal or illegal means, the necessities for life, festivities, opium-smoking and gambling. As elsewhere among the native population of Java, society here is entirely ruled by its beliefs. But it is animistic conceptions, modified by Hindu and Muḥammadan ceremonial, that guide the Javanese in his daily life. The practice of Shāfiʿī teaching in the "Vorstenlanden" and in Djokyākartā has the following peculiarities: the ordinary Javanese does not adhere strictly to his religious duties with regard to *ṣalāt* (*sembahyang*) and on Fridays it is usually only the *santri* (devout) and the ʿulamā that assemble in the masdjid. The call to prayer does not consist simply of the prescribed *adhān*, but also of the beating a large drum (*bĕdug*) in the outer gallery of the temple; there are no minarets in Djokyākartā. This sultanate is one of the areas where *zakāt* and *fiṭra* are rarely and very irregularly paid. Fasting is not seriously practiced by the masses and only observed by the devout and the ʿulamā. The *ḥadjdj* however, has a great attraction for them, and many from Djokyākartā go to Mecca without seeing that their families can subsist without them.

In Djokyākartā also the circumcision of boys and girls is regarded as the first duty of a Muslim.

In the "Vorstenlanden", including Djokyākartā, the great festivals of Mawlid, ʿĪd al-Fiṭr and ʿĪd al-Ḳurbān (*garĕbĕg mulud*, *-puasā* and *-bĕsar*) are observed, more than in the rest of Java, with ceremonies and rejoicings. The first two derive their importance from the fact that the Sultan and his vassals receive their land-tax (*padjĕg*) then. For six days before the *garĕbĕg mulud* music is played on the *gamĕlan* and religious meals (*slĕ-*

bah) take place. The *garĕbĕg pasa* is regarded by Europeans as the Muḥammadan New Year and visits of congratulation are paid.

In the nights of the 21st, 23rd, 25th, 27th and 29th Ramadhān religious meals (*maleman*), with recitations of the Ḳor'ān, are held in a spirit of rejoicing even in the little villages.

DJOLOF (Diolof) was the name of a kingdom, that no longer survives, which included the modern Djolof, Walo, Cayor, Baol, Sine, Salum, Dimar and provinces of Bambuk adjoining the desert of Ferlo.

Wolof is the name of the language spoken in these districts and also of the people who speak it.

The modern Djolof (14°—16° N. Lat., 14°—16° W. Long. of Greenw.) is bounded on the north by Dimar and Futā-Toro, in the east by Futā and Bondū, in the south by Uli and Niani, in the west by Diambur, Baol and Cayor. Djolof has no river within its boundaries and is one of the most sparsely populated districts in Senegal; but it possesses fine pastures and groves of gum-trees. It has always been a place of refuge for agitators and rebels who, when defeated and exiled from their own country, find a safe asylum here. Tradition tells of a pious Muslim named Būbakar (Abū Bakr) b. 'Omar, also called Abū Darday, of the family of the Prophet, who came from Mecca about 1200, settled in Senegal and preached Islām. He married the daughter of the *lam-toro*, Fatimata Sal, who bore him a son Aḥmadu, who afterwards became ruler of the great kingdom of Djolof under the name Ndiadiane Ndiaye (1212—1256). From him was descended the ruling family of Djolof and the title *Bur ba Djolof* remained in it for over three hundred years. The dissolution of this kingdom is placed about 1566. Long before this however, Europeans had become acquainted with Djolof. In 1446 Diniz Fernandes discovered the river Senegal and captured four Wolof, whom he brought to Lisbon. Ca da Mosto, who reached the 'Gilofes' (Marmol's Geloffes) in 1455, gives a detailed account of the king of Senega, *Zuchalin* (*Bur ba* Tinkli?), of the religion of the negroes, their manners and customs, and the products of the country; as to the Sereres and Barbasins (of Sine?), he tells us that they "are beyond the authority and realms of the king of Senega". Legend agrees with the Portuguese historians regarding Būmi Diēlan, brother of the *Bur ba* Biramo, who went to Portugal in 1482.

The first mention of a French voyage to the mouth of the Senegal is in 1558, when traders from Dieppe were very well received by the Senegalese. From 1638 dates the first permanent French settlement at the mouth of the river. Jannequin tells us that an ambassador from the *Damel* and another from the *Brak* were received there and that French boats used to go for hides to the kingdom of Sandia-Lame, the suzerain of the Damel and the Brak. Later in 1677, Ducasse seized Rufisque and concluded treaties with the chiefs of the country, by which France was guaranteed, on payment of customs, a monopoly of trade in these regions. Two years later, he advanced into the interior, forced the chief of the Baol to sue for peace and compelled the Damel of Cayor to accept his terms; he imposed new treaties on these chiefs, which assured to France possession of, and sovereign rights over the coast between Cape Verd and the Gambia, for 6 leagues inland, as well as a monopoly of trade, without paying customs. About 1682, Lemaire gives some details of the Wolof, their occupations and their dealings with the Arab marabouts.

In 1685 La Cambe was visited by the Brak of the Walo; in the following year, he sent his agents to make a treaty with the "Bour ba Guiolof". At this time, he tells us, the Moors had taken advantage of the chaos, reigning among the Wolof, to kill the Brak, and drive the Damel and Bour ba Guiolof from their dominions; the Wolof however, ultimately succeeded in ridding themselves of the Moorish yoke. In 1701, by order of the Senegal Company, Brue again began negotiations with the Damel of Cayor. Adanson's journey occupied the years 1749 to 1753 and, after spending five years in Senegal, he brought back a mass of documents which he used for various works. Poncet de la Rivière in 1763 and 1765 negotiated the cession of the peninsula of Cape Verd with the Damel; in 1785, M. de Repentigny signed a treaty of alliance with the Bur Salum. Boufflers in the following year came to an agreement with the Damel of Cayor, by which in consideration of an increase in the customs the latter renounced all claim to the coast; the cession of Cape Verd was renewed in 1787 under the governorship of Geoffroy Villeneuve, who in the same year visited Cayor, Djolof, Baol and Sine. Rubault had made a journey through the lands of Cayor and Djolof in the preceding year. In 1819, Walo was ceded to France, but attempts to cultivate it failed; about 1841 Jaubert began to develop the cultivation of earth-nuts in these lands. Faidherbe arrived in Senegal as governor in 1854. In 1855 and the three following years he waged a bloody war on the Moors and their allies, the Tiedos of Walo; in 1858 the Trarzas and the Braknas sued for peace. In 1856 Faidherbe subdued the Diambur; and in 1859, after several politic measures, he signed treaties with the kings of Baol, Salum and Sine. The French had not yet made any treaty of peace with Cayor. A desire to protect traders and to establish a telegraphic line between St. Louis and Gorée led them in 1859 to enter into negotiations with the Damel Biraima. As his successor Makodu repudiated the agreement, he was deposed in favour of Madiodio whom all the chiefs of provinces, including Lat-Dior, recognised as Damel of Cayor in 1861. Lat-Dior however soon afterwards collected his adherents and attacked Madiodio; force had to be used to defend the *damel* elected under French influence. Lat-Dior was defeated in several engagements; in 1862 driven out of Baol and then out of Sine, he took refuge in the Rip country and found an ally in the chief Maba. The incompetent Madiodio was deposed and the governor of Gorée invested with the green mantle chiefs chosen by the French in Cayor; but new difficulties arose with Maba, then with Aḥmadu Shaikho and Lat-Dior.

In the reign of the *Bur ba Djolof* Bakar Tenm Khkhy, a marabout of Futa, called Maba, ravaged the eastern districts of Baol; at the request of Lat-Dior, he invaded Djolof in 1865, defeated the *Bur* at Mbayen and threatened Cayor; his army was routed near Nioro; in 1867, while about to invade Sine, he was defeated and slain at Somb.

Hardly had he disappeared, when the Tidjânî chief Aḥmadu Shaikho made an alliance with Lat-Dior and attempted the invasion of Cayor; their followers were defeated at Luga in 1869. In 1871, the government of the colony recognised Lat-Dior as *Damel*. When Aḥmadu Shaikho with his Tidjânîs again invaded Djolof and Cayor, an expedition, supported by Lat-Dior's troops routed the Marabut's army at Bûndû and he himself was slain at Coki in 1875. At first relations with Lat-Dior were quite cordial; but in 1882, the construction of the railway from Dakar to St. Louis raised new difficulties. Lat-Dior, having shown signs of hostility, was proclaimed deposed along with Samba Laobe, whom he had elected *Damel* in his place. Through French intervention his nephew Aḥmadi Ngone Fall was recognised as *Damel*; Samba Laobe attempted to defend his claims but was defeated; but as Aḥmadi Ngone had not been able to win the sympathies of the people of Cayor, he had to abdicate and Samba Laobe succeeded him; in the meanwhile the Dakar—St. Louis railway was completed. In May 1886, a dispute broke out between the *Bur ba Djolof* 'Alî Buri and the *Damel*; their armies met in Djolof and 'Alî Buri was victorious. The governor levied a heavy fine on the *Damel* for his conduct; Samba Laobe refused to pay and rebelled; he was killed at Tivavaune.

Lat-Dior claimed the succession and attacked a detachment of Spahis at Dekkele but was slain in the battle that ensued. In consequence of his action, Cayor was divided into six provinces and in 1886 finally entered a period of peace of prosperity. French intervention had to be equally effectively enforced in Baol and Sine. The deposition of the *Teigne* of Baol in 1890 and the disarmament of the Tiedos in 1891 definitely established French authority in this region which was divided in 1894 into two provinces. In 1898 on the death of their *Burs*, Sine and Salum also were divided into two provinces under French control.

At the present day the Wolof constitute the predominating element and by far the largest in point of numbers (last census, 407,279) of the population of Senegal. In the north in Dimar, where they form almost half the population, their neighbours are the Tucolor. In compact groups, whose unity is hardly affected by the presence of a number of nomadic Fulbe tribes, they occupy Walo, Djolof, the countries formed on the dismemberment of the ancient Cayor kingdom and the Atlantic shore from Dakar to the Gambia. In most of the parts on the Senegal and the Niger there is a quarter of Wolof traders.

The Wolof are tall in stature (average is 5′ 8″); their skin is an ebony black with a bluish tint except the palms of the hands and the soles of the feet and the inside of the limbs, and the bend of the neck which are somewhat lighter. The skull is dolichocephalic, the index being 70 in the male and 73 in the female, and the cranial capacity 1,495 (Hovelacque) and the prognathism often very marked. Their hair is thick and woolly, the lips thick and the incisors almost vertical; the arms are muscular and the hands long; but the lower limbs are thin, the calves little developed, and the instep almost non-existent. The Wolof woman is also tall (average 5′ 4″); in her the spine is very curved and the breasts pear-shaped; on the whole her thicker lips, flatter nose and protruding lower jaw render her an inferior type to the man.

Gris-gris are very common; these are verses from the Ḳor'ân enclosed in a leather case, or sometimes a piece of cloth, over which magic words have been repeated, placed in the horn of a doe or in mussel-shells, bones etc. He who wears one is safe from the malice of sorcerers, from serpent-bite, from the evil eye and need not fear bullets or evil tongues, while he soon becomes a good shot. The women wear them, real or imitation, in their hair, as ornaments.

The Wolof live in huts in the form of a beehive, the lower part, which is cylindrical, being made of reeds (Djolof) or clay (Walo); the conical roof is of reeds. The only opening is the door; sometimes however, there are small windows of the size of a man's hand enabling one to see what happens outside. The cottage is divided into two parts by a wall of earth or reeds; in the first apartment the occupants eat, sleep and receive their visitors; the other apartment is used as a larder and during the wet season as a kitchen. One family occupies several huts, which are found grouped in a corner of an enclosure (*kerr*) surrounded by a hedge of irregular shape of branches, reeds and posts; in another corner a very small hut forms the henhouse; at a little distance are pegs to which the cattle are tethered; the *kerrs* of the Wolof are usually grouped as chance directs and not according to the classes of inhabitants; at the entrance or in the centre of the village is the palaver tree under which the business of the village is discussed and idlers come to smoke and chat. The furniture includes the bed, which varies in shape, wooden boxes, trunks in which clothes and objects of value are kept; on a table are placed the calabashes for milk; arms are hung on the walls; in the second apartment are the wooden mortar and pestle for grinding millet, calabashes, a few earthenware pots and mats. The Wolofs live chiefly on millet; they eat it cooked in water (*guel*), or after pounding it, the women make kuskus (*tiere*) or soup (*lakh*) of it; these dishes are also made of maize or rice; earth-nuts are eaten raw, boiled or roasted; potatoes, manioc, the fruit of the baobab are also eaten; in Walo, a good deal of fish is consumed.

Millet is the staple cereal grown by the Wolof; the principal article of export is the earth-nut (in 1910: 227,300 tons). The rice, maize, manioc, and vegetables grown are consumed in the country; the Wolof country also yields a small quantity of rubber, which comes from the Niayes country, and some gum.

The Wolof are not cattle-rearers; they are fairly skilful smiths, cobblers and weavers etc. When a woman is enceinte, she covers herself with *gris-gris* to protect herself against magic; as soon as she feels the pains of travail, all the men and male children are sent out of the house; the woman shuts herself up with her mother and experienced women friends in the hut, which is kept dark; no midwife is employed; the birth

takes place in a crouching position; the umbilical cord is broken and not cut with some sharp instrument. The young mother only takes light food (milk, rice); for seven days she does not appear in public or make her toilet. On the seventh day after its birth, the child is given a name and its hair is cut for the first time; a feast is held and presents made to the child and the mother.

Among the Wolof only the boys are circumcised. The rites are less strictly observed than among the Tucolor for example. Thus circumcision may be performed twice a year, it is performed at a relatively early age (10 to 12 years); the operation is performed in the village itself, the operator is not necessarily a cobbler or a smith, nor is the newly circumcised boy forbidden to enter the village etc. During the operation, which is performed in the morning, shortly before sunrise, the boys must not betray the slightest sign of pain; experienced individuals bandage them; then all hurry out the village and take a long walk in the country. On their return, the people of the village come to meet them and clothe them in the dress worn by circumcised persons, a long shirt of black cloth with a white seam at the foot of the sleeves and a head-dress of black cloth tied round the neck. A piece of twisted cloth thrown over the shoulder is used to beat off those who come too close; they are all furnished with a stick with which they chase the birds which the newly circumcised are allowed to kill and take away. Till they recover, they eat and sleep with a guardian who watches carefully that they all begin and finish a meal at the same time. He forces them to take many kuskus of coarse millet (*sumbe*) and makes them dance and sing; every week these boys eat mutton outside the village. When completely cured, they put on a head-dress higher than the first, but they only discard their *kubu* long after their recovery; this *kubu*, in which the prepuce that has been cut off, is kept, is used as a *gris-gris* and protects from bullets.

Marriage takes place between people of equal status; a man may take a wife from his caste or from a lower. Marriage is preceded by betrothal (*tak*); when the hut is ready, the girl goes there accompanied by her girl friends. At the door of her new abode, the husband's sister offers her millet-seeds tobacco and pistachios.

Polygamy is regulated by the Ḳor'ān; the first wife has authority over the others, and is head of the household; questions of divorce are laid before the ḳāḍī; according as the case is decided, the wife gives up or keeps the dowry given by her husband.

When a Wolof dies, his body is washed, then wrapped in a piece of white cloth; the interment takes place almost immediately after death. The grave, which is very narrow, is dug by those present, who are careful not to reopen an old grave; the body is placed in it on its right side; graves are turned towards the east. On leaving, the mourners are careful not to turn back. Seven days later, the family prepare food for distribution to the poor and to the pupils of the Ḳor'ān schools, who pray for the deceased.

A woman, who becomes a widow, wraps herself from head to foot in a black cloth; she wears this single garment without washing or changing it nor paying the least attention to her toilet for four months and six days; at the end of this time, she goes out of the village by night, casts off her garb of mourning, washes herself and puts on new clothes. A widower does not wear mourning.

The unit of society is the family, i. e. a group of individuals having a common ancestor. Descent may be traced through the male line (*genio*) or the female (*meme*). Each *meme*-family has a name but the Wolof call themselves and salute one another by the clan-name they receive from their fathers.

Besides this division by families, there is a classification by castes; the first, and the largest in numbers, is that of the *dyamburs*, or freemen, who were divided politically into nobles and commoners; next comes the caste of *nienios* which is chiefly composed of artisans, smiths, goldsmiths, tanners, cobblers, musicians and singers, weavers, makers of boats and wooden utensils and lastly the *griots*, the most despised of all. The captives were on the lowest rank of the social scale.

There was a hierarchy among the noble families, some furnishing the chiefs of districts, others the chiefs of provinces, the electors of kings. To be eligible for election as *brak*, a man had to belong to the royal family on the male side and on the mother's to one of the three princely families. In Djolof, rights were only transmitted in the male line while in Sine and Salum power remained in the hands of a family by female descent.

The Wolof language is spoken in Djolof, Walo, Cayor, Baol and Sine-Salum; it is the language usual in commerce throughout Senegambia. Many of the Fulbe of Djolof, of the Moors of Walo, of the Sererer of Sine and of the Laobe speak it also; the Wolof and Serere have a connecting link in the language of the Lobus.

The sounds *ch* (*sh*) and *z* of French are not found in Wolof nor the aspirated clicks peculiar to the Serer and Fulbe language. *T* and *d* are usually palatals, *b*, *d*, *g*, *dj* may be nasalised: *t* and *d* are also found cerebralised.

The conjugation of the verb distinguishes the principal tenses, past, present and future but has very few secondary tenses. The use of various moods, and the many derivatives from the nouns give the Wolof language considerable wealth of expression and a certain energy.

The Wolof employ a quinary notation. Their literati are fond of talking Arabic, and can express themselves more or less purely in literary Arabic.

"The Berbers must have converted the Wolof to Islām, partially at least, at quite an early period. In the xv[th] century, Ca da Mosto found their chiefs following the Muslim faith which however they soon lost through contact with Christians. Nevertheless the knowledge of one God, whom they called *Yalla*, was wide spread among the masses who remained heathen; the pagan Wolof only reverenced their family spirits (*ntumbe*), whom they regarded as intermediaries between them and this distant God".

Although they had relapsed into paganism, the rulers of the lands on the Senegal appear to have always been very tolerant to Muslims, even giving the Marabouts concessions, on which they could settle and form communities which often took their name. The industrious masses of freemen, exploited by the warlike and pagan Tiedos abandoned fetish worship before the aristocratic

caste; we know with what repugnance Lat-Dior adopted Islām. There are 3000 Catholics among the Wolof; they are particularly numerous in Gorée, Dakar and St. Louis. At the present day, the great majority of the Wolof are Muslim. In each village, there is a place reserved for common prayer (*djāma* = *djāmiʿ*), and one or more Marabuts, generally Wolof or Tucalor. The Muslim Wolof are very strict as regards praying and fasting; they observe the festivals of *Tabaski* (*al-ʿīd al-kabīr*) and of *Kori* (*al-ʿīd al-ṣaghīr*); fetish rites may be traced in the festivals that have supplanted pagan feasts. The Muslim Wolof readily join religious brotherhoods; while the Tucalor are mainly Tidjānī, the Wolof are on the whole Ḳādirī. It is among the Wolof of Cayor, Baol, Djolof and Sine-Sālum, that Aḥmadu Bamba, the head of a curious sect recently founded, has found most of his adepts, the *Murites*.

(E. Destaing.)

DJUBAIL, a town on the coast of Syria between Bairūt and Batrūn. The ancient holy city of Adonis had lost much of its importance, by the time it was conquered by Yazīd and Muʿāwiya, the sons of Abū Sufyān. It was incorporated in the *djund* of Damascus and like the other coast-towns had a small garrison till the Fāṭimid period and was the home of a number of Muslim scholars. In 496 = 1103 it was taken by the Crusaders, and as the seat of a baron, vassal to the king of Jerusalem, Djubail regained a certain importance: its little harbour was restored and the strong fortress built, the remains of which still arouse the admiration of the visitor. Djubail was captured by Ṣalāḥ al-Dīn, but restored to the Franks by the Kurds on payment of 6000 dīnārs. Apart from this brief interval, the town has always been under Muslim rule; but it has never since played a part in history and its importance has gradually diminished. At the end of the xvth century, it passed with the lands attached to it, into the hands of the Banū Ḥamāda the Mutawālī family, ruling in Lebanon, who retained it till the xviiith century, when it had sunk to be a wretched little village. Since it became the seat of a Mudīriya in the autonomous district of Lebanon, it has become a little busier; but as it has no harbour and the district around is confined and unproductive, it can never attain any considerable development. The population is about 2000, almost all of whom are Maronite, except a few Muslim families.

(H. Lammens.)

DJUBBA (A.), in Egypt *gibba*, a garment of Syrian origin, with narrow sleeves (Bukhārī, *Ṣaḥīḥ*, transl. by Houdas and Marçais, ii. 321), sometimes lined with cotton, worn under the ʿabā [q. v., p. 1]. In Egypt it was worn over the ḳaftān; it was a long robe with short sleeves, lined in winter with fur. In Spain, in the transition period, djubbas of flock silk were worn. In Mecca the garment, which is made of light cloth or silk, is worn over the *ḳuftan*, during the hot season it is thrown over the shoulders. Women wear a *djubba* of cloth, velvet or silk, embroidered with gold or coloured silk, narrower than the man's. The word has passed into the Romance languages: Spanish *aljuba*, Italian *giuppa*, French *jupe*, *jupon*.

(Cl. Huart.)

AL-**DJUBBĀ'Ī**, Abū ʿAlī Muḥammad b. ʿAbd al-Wahhāb, a native of Djubbā in Khūzistān, one of the leaders of the Muʿtazilites. He studied with Abū Yaʿḳūb Yūsuf al-Shaḥḥām, the head of the Baṣrah school of Muʿtazilites and afterwards became one of the chief champions of this school himself till his death in 303 (915-916). He composed a work on the fundamental doctrines *Uṣūl* and wrote polemics against al-Rāwandī [q. v.], al-Naẓẓām [q. v.] and others. He also often disputed with his pupil al-Ashʿarī, who, when he had abandoned Muʿtazilite doctrines, published several pamphlets against his teacher (given in Spitta's *Zur Geschichte Abu 'l-Ḥasan al-Ashʿarī's*), notably a refutation of Djubbā'ī's work on the fundaments. No trace of these works has survived, however, nor of al-Djubbā'ī's commentary on the Ḳorʾān, which he wrote in the dialect of his native town (Djubbā) and whose loss is much to be deplored on philological grounds.

Even more renowned than the father was his son Abū Hāshim ʿAbd al-Salām, who died in 321 (933) and whose followers are known as

Bahshamīya. Another name for them, given by al-Baghdādī, al-Dhammīya, see above p. 956b, seems rather to be a term of reproach and is less usual. One of them was the celebrated Būyid vizier Ibn ʿAbbād [q. v.], so that at that time almost all Muʿtazilites honoured Abū Hāshim as their Shaikh. Only the titles of his works have survived, but we know his views fairly accurately through the polemics against them by his opponents. His theory of conditions or moods has particularly contributed to make Abū Hāshim's name celebrated. We cannot go fully into the doctrines of the al-Djubbā'ī, father and son, here, and must therefore refer the reader to the *Bibliography*; it may be sufficient to note that al-Djubbā'ī regarded the attributes of God, as identical with his being and, in consequence, practically denied their existence. Abū Hāshim sought to reconcile this teaching with orthodox doctrine, by explaining these attributes as conditions (*aḥwāl*), by which he meant qualifications, which were nearer the essence of things, than the more or less separable accidents and therefore play a part not only in the conception of God, but in the domain of universals also. He believed that, by this explanation, he not only restored the unity of the divine being, but also justified speaking of the attributes of God, in as much as the moods are nothing essential but simply conditions of phenomena, but his opponents were not satisfied with this compromise between being and not-being.

DJUDDĀLA. The Banū Djuddāla were one of the 70 Ṣanhādja tribes who wear the Lithām. They lived west of the Lemtūna in the western Sahara on the shores of the Atlantic Ocean near Arguin and Cape Blanc. A Djuddālī, Yaḥyā b. Ibrāhīm, while returning from the ḥadjdj, induced the reformer Yā-Sīn to settle in this district. His reformed Islām was forced upon the Lemtūna tribes, more particularly the Djuddāla (Ṣafar 432 = Oct.-Nov. 1040). But on the death of Yaḥyā b. Ibrāhīm they refused to recognise the spiritual authority of Yā-Sīn so that he had to retire to the adjoining Lemtūna tribes; in Muḥarram 448 (March-April 1096), to the number of 30,000, they besieged an Almoravid general Yaḥyā b. ʿOmar in the Djebel Lemtūna and in the same year slew him with a large number of his followers at Tabfarilla (?) between Taliwīn and the Djebel Lemtūna. They were probably subjected by Abū Bakr b. ʿOmar, Yaḥyā's successor, about 493 (1062), and, with all the *lithām* wearing Ṣanhādja, passed under the rule of Yūsuf b. Tāshfīn, the first Almoravid Amīr. They shared the fortunes of this dynasty and since then their name has disappeared from history. They have been identified as the Gaetuli of ancient writers.

DJUDHĀM.

The above is the traditional genealogical tree of Djudhām, the eponymous ancestor of the Banū Djudhām. Djudhām is only a nickname, his real name being ʿAmr. He was the brother of ʿĀmila and Lakhm; i. e. in the first century A. H. these three tribes were believed to be very closely related. By this time the Djudhām had absorbed the Lakhm. Their Yamanite descent was not so readily accepted. Muḍar and more particularly the Banū Asad b. Khuzaima claimed Djudhām as a Muḍarite tribe which had in early times migrated to Yemen. Ancient verses were quoted in support of this. But even if we neglect the partiality of Arab poetry, all that can be deduced from these verses is the existence of friendly relations, possibly even of a *ḥilf*. These discussions testify to the importance of the Djudhām. The great majority of the tribe itself claimed South-Arabian descent, which claim had perhaps no more substantial basis than the other view, but better corresponded to their political situation in the Sufyānid period.

During this period, the Djudhām were really a confederation of nomads, occupying the deserts between the Ḥidjāz, Syria and Egypt. In the north, they were bounded by the Banū Kalb, and on the Arabian side by the Medina territory; they were scattered throughout the Wādī 'l-Ḳurā and around Tabūk and Aila; they were to be met with on horseback on the Egyptian frontier; their territory was undulating, of deserts, steppes, pastures, oases few and far between and including ʿAmmān, Maʿān, Adhruḥ, Madyan and Gharra. They made their living on the trade-routes joining Arabia, Syria and Egypt, as guides and caravan-leaders and levied customs and tolls for their services. The *Sīra* mentions as belonging to them, a wateringplace named Dhāt al-Salāsil, which has not yet been identified, and Ḥismā, an extensive area to the southeast of Aila. They have been represented as descendants of the Midianites, but why not of the Nabataeans as they occupied exactly the same territory as the latter? The Medina tribe of Banū Naḍīr is said to have broken off from them and adopted Judaism. This circumstance explains why this religion made converts among those of their clans, who lived near the Medina territory. Their constant intercourse with Syria and Egypt had early conduced to the diffusion of Christian ideas among the Banū Djudhām. In the early years of the Hidjra, we find them at the head of the *Mustaʿriba* or Christianised Arabs, allies of the

Byzantines; their Christianity however, was very superficial, like that of the nomad tribes.

Their first dealings with Islām were by no means friendly. One of them undertook to warn Abū Sufyān shortly before the battle of Badr, that Muḥammad was lying in wait for his caravan. Ḥassān b. Thābit often rails at them and accuses them of treachery. They several times robbed the caravans of Diḥya b. Khalīfa [q. v., p. 973b], the commercial and political agent of the Prophet. In retaliation the latter sent expeditions against them, led first by his favourite Zaid b. Ḥāritha, then by one of his best supporters, ʿAmr b. al-ʿĀṣ, soldier and diplomat. As his mother belonged to this district, he hoped to be able to enter into relations with the Djudhām. To extricate ʿAmr from his difficulties, a column had to be mobilised under Abū ʿObaida b. al-Djarrāḥ. A few Djudhām chiefs appear to have independently negotiated with Medina. At Muʾta they again barred the Muslims' way to the north and the Tabūk campaign was decided on to give them a lesson. We are therefore not surprised to find them on the side of the Byzantines during the great invasion and they fought at Yarmūk on their side. After the final victory of the Muslims, they proved faithful allies of the Arabs and helped them greatly in completing the conquest of Syria. Their recruits filled the gaps caused by war and plague. At the assembly of Djābiya [q. v., p. 988] when ʿOmar established the *dīwān*, they claimed to be allowed to profit by the new organisation. It had been intended to exclude them under the pretext that, being in their own country, they had no claim to the title or advantages of the Muhādjir: but their request had to be granted to their energetic protests. In the struggle between ʿAlī and Muʿāwiya, they like all the Arabs of Syria, embraced the cause of the latter. In the meanwhile, crossing the frontiers of their ancient desert country, they had entered Djund Filasṭīn, where they henceforth formed the bulk of the Arab population. In contemporary poetry, Syria is frequently called the land of "Lakhm and Djudhām". We find one of their principal chiefs, Rawḥ b. Zunbāʿ at the Umaiyad court and under him they took part in the Ḥidjāz campaign under Yazīd I.

Just before the violent schism between Ḳaisites and Yamanites, we hear a last echo of the ancient discussions on the genealogy of the Djudhām; the case was taken before the Caliph's tribunal but the violent intervention of one of their chiefs broke up the proceedings. At the second assembly of Djābiya, the skill of Rawḥ b. Zunbāʿ was responsible for the success of the candidature of Marwān b. al-Ḥakam, and he thereby gained the gratitude of the Marwānids for himself and his tribe. With the Banū Kalb, the Djudhām were at the head of the Yamanite tribes of Syria. In Egypt, where they helped ʿAmr b. al-ʿĀṣ in his conquest, they obtained important concessions of territory: in the 12th century A. H. we still find them around Alexandria. Their great poet was ʿAdī b. al-Riḳāʿ, the favourite of Walīd I.

The great rising of the Ḳaisites, after the battle of Mardj Rāhiṭ, strengthened their belief in their South Arabian origin. They continued to maintain their position as a distinct group. In course of time the name Djudhām disappeared before more modern names. In the 12th century, in addition to their lands in Egypt, territory belonging to them is mentioned in Balḳāʾ, chiefly in the region of Karak, where the energetic tribe of Banū Ṣakhr is said to be descended from them, and to the east of the Jordan and the ʿAraba, they still occupy the lands of their ancestors.

DJŪDĪ, DJEBEL DJŪDĪ or DJŪDĪ DAGH, a lofty mountain mass in the district of Bohtān, about 25 miles or 7 hours journey N.E. of Djazīrat ibn ʿOmar, in 37° 30′ N. Lat. It is as yet practically unexplored and is believed to be about 13,500 feet high. Djūdī owes its fame to the Mesopotamian tradition, which identifies it, and not Mount Ararat, with the mountain on which Noah's ark rested. It is practically certain from a large number of Armenian and other writers that, down to the xth century, Mt Ararat was in no way connected with the Deluge. Ancient Armenian tradition certainly knows nothing of a mountain on which the ark rested; and when one is mentioned in later Armenian literature, this is clearly due to the gradually increasing influence of the Bible, which makes the ark rest on the mountains (or a mountain) of Ararat. The highest and best known mountain there is Masik (Masis), therefore Noah must have been stranded on it; the next stage in the growth of the Armenian tradition is due to Europeans, who transferred Ararat (Armen. Airarat), the name of a district, to Masik, through an incorrect interpretation of Genesis viii. 4.

The tradition that Masik was the mountain on which the Ark rested, only begins to find a place in Armenian literature in the xith and xiith centuries. Older exegesis identified the mountain now called Djebel Djūdī, or according to Christian authorities, the mountains of Gordyene (Syr. *Ḳardū*, Armen. *Korduḳʿ*) as the apobaterium of Noah. This localisation of the Ark's resting-place, which is found even in the Targums, is certainly based on Babylonian tradition, and arose out of the Babylonian Berossus. Besides, the mountain Niṣir which appears in the Flood-legend in the cuneiform inscriptions, might well be located in Gordyene (in the widest application of the name). The ancient Jewish-Babylonian tradition was adopted by

the Christians and the Arabs learned it from them, when their conquests carried them into Boḥtān. "They transferred the name Djūdī, which the Ḳur'ān (Sūra xi. 46) mentions as the landing-place of Noah, quite unconcernedly to Mount Kardū which had, from the remotest times, been regarded as the apoboterion. But Muḥammad really meant the mountain called Djūdī in Arabia (*Hamāsa*, 564 = Yāḳūt, ii. 270, 11 = *Mushtarik*, p. 111), which he probably thought was the highest of all mountains". Thus writes Nöldeke in the *Festschr. für Kiepert* (1898), p. 77, and he is clearly right. It is also possible that Muḥammad in his localisation of the mount on which the ark rested was influenced by some older tradition current in Arabia. For this view we might quote a remark of the apologist Theophylus (*ad Autolycum*, lib. III, c. 19) who mentions that, even in his time, the remains of the ark were to be seen on the mountains of Arabia. The transference of the name Djūdī from Arabia to Mesopotamia by the Arabs must have taken place fairly early, as has been mentioned, probably as early as the time of the Arab invasion; even in the older poets, for example, Ibn Ḳais al-Ruḳaiyāt (ed. Rhodokanakis, cf. Nöldeke, *Wien. Zeitschr. f. d. Kunde d. Morgenl.*, xvii. 91) and Umaiya b. Abi 'l-Ṣalt (ed. Schulthess, *Beitr. z. Assyr.*, viii. N⁰. 3, 5) Djebel Djūdī is no longer an Arabian, but the Mesopotamian mountain. The transference of the name Djūdī to the Ḳardū mountains and the rapid acceptance of the new name may probably have been favoured by the circumstance that the land south of Boḥtān towards Assyria, had often in the Assyrian period formed part of the district of Gutium, the land of the Guti (Ḳutī) nomads, and this, the name of a people and district, had not quite disappeared in the early years of Islām. On the geographical term Gutium, which is known to have existed even in the early Babylonian period, see Scheil, *Compt.-rendus de l'Académie des Inscript. et Bell. Lettres*, 1911, p. 378 *et seq.*, 606 *et seq.*

If we assume, as is obvious, that the term Ararat (Assyr. Urarṭu) at one time also included an area to the south of Lake Van (cf. the mountain name Araṭṭi in the Gordyene cuneiform inscription and Šanda, *op. cit.*) then Masik (Great Ararat) and Djebel Djūdī, both traditional resting-places of the Ark, might each be called Mount Ararat in conformity to the Biblical account.

Like the whole country round Ararat, the neighbourhood of Djebel Djūdī is to this day full of memorials and legends which refer to the Deluge and the life of Noah after leaving the Ark. Thus for example at the foot of the mountain is the village of Ḳaryat Thamānīn = "the village of the 80 (Syr. *Tᵉmānīn*; Armen. *Tᵉmān* = 8)" where legend says the eight persons saved in the Ark first settled; cf. Hübschmann, *loc. cit.*, xvi. 333-334. The Arab geographers also mention a monastery on Djūdī in their time, Dair al-Djūdī; on this cf. Shābushtī, *Kitāb al-Diyārāt* (J. Heer, *Die hist. u. geogr. Quellen in Yāḳūt's geogr. Wörterbuche*, 1898, p. 96) = Yāḳūt, ii. 653.

We might farther mention that Layard and more recently (1904) L. W. King discovered rock-sculptures and inscriptions of Sanherib in the Djebel Djūdī; King therefore proposes to identify this mountain with the Nipur of the Sanherib texts. Cf. Layard, *Nineveh a. Babylon*, p. 621; King in the *Journ. of Hellenic Stud.*, 1911, Vol. 30, p. 328 ª.

(M. Streck.)

DJUHAINA, an Arab tribe. The Djuhaina are near relatives of the Balī, Bahrā, Kalb and Tanūkh and belong like them to the great South-Arabian group the Ḳuḍāʿa. In the pre-Islāmic period we find them first in Nadjd, then in the neighbourhood of Medina, between the Red Sea and the Wādī 'l-Ḳurā (cf. the map in Caetani's *Annali*, ii. 376). They were settled there when Muḥammad's power began to extend. They adopted the Prophet's religion and were incorporated in the Islāmic community without resistance. They did not take part in the Ridda, but remained strong supporters of the rising caliphate. A section of them remained in their ancient territory and there the Djuhaina dwell to this day in that district, but the bulk of the tribe migrated, particularly to Egypt, — at least it is only on Egypt that we have any information. We find the Djuhaina here at the conquest with other closely allied sections of the Ḳuḍāʿa. They then gradually advanced from Lower Egypt, where the little village of Dawār Djuhaina (Boinet Bey, *Dictionnaire Géographique*, p. 104) is still inhabited by Beduins of the name, to Upper Egypt where they played a considerable part in the Fāṭimid period. After a good deal of fighting they ultimately settled down peaceably with other Arab tribes around Akhmīm. Members of this tribe are mentioned even earlier, in the third century A. H., at Aswān and, although the details are not exactly known, they were among the tribes here on the borders of the Nubian kingdom, who gradually broke the power of this ancient Christian kingdom. In any case it was the Djuhaina (Ibn Khaldūn, v. 429, 19), who brought about the dissolution, no-

madisation, and conversion to Islām of the Nubian kingdom and thereby broke the strongest defence that the lands on the Upper Nile had had against the inroads of the Arabs and Islām. Since then we have been for centuries without any notice of them, but at the present day all the numerous Baggāra [q. v., p. 561] tribes, i. e. the Semi-Arabs of Dār Fūr and Wadāi are still positive that they have a common bond in being Djuhaina. Nachtigal is our authority for this important fact. It gives us a clue to understanding the mingling of races in the Eastern Sūdān and makes it possible to trace to the present day the history of a tribe of whose existence we have evidence in pagan times.

Bibliography: All the authorities have been collected in my essay: *Zur Geschichte des östlichen Sūdān* in *Der Islam*, i. 155 *et seq.*

(C. H. Becker.)

DJULĀHĀ, or Djolāha, the name of the Musalman weavers, who form almost an occupational caste throughout Northern India, though they have also found their way to the cotton mills of Bombay. At the Census of 1901, their number was three millions, or nearly $5^{1}/_{2}$ of the total Musalman population, of whom just half were in the United Provinces.

(J. S. Cotton.)

DJULAMERG (Djulamerik), the capital of the Sandjak of Hakkāri in the Wilāyet of Wān (*pop.* 4000, according to Cuinet). The town is shut in by mountains and lies about two miles from the Zāb. There are hot sulphur springs near it.

According to Andreas's view (see Pauly-Wissowa, i. 1699; M. Hartmann, *Bohtān*, p. 143), combatted by Marquart, *Ērānšahr*, p. 158 *et seq.*, Djulamerg is the τὸ Χλωμάρων of the ancients. The village of Djulamerg gave its name to a Kurdish clan, on which see Ibn Faḍl Allāh al-'Umarī: *Not. et Extr.*, xiii. 317 *et seq.*

Bibliography: 'Alī Djawād, *Djoghrāfiya Lughātī*, p. 298; Ritter, *Erdkunde*, xi. 625 *et seq.*; Cuinet, *La Turquie d'Asie*, ii. 728 *et seq.*; Binder, *Au Kurdistan*, p. 165 *et seq.*; *Geographical Journ.*, xviii. 132.

DJULFA (Russian Djulfa), an ancient, once important town in Armenia, on the north bank of the Araxes, lying approximately in Lat. 39° N., now belonging to the Russian gouvernement of Eriwān. Shāh 'Abbās I the Great (see above p. 8) brought about the ruin of the town when in 1014 (1605) he brought the entire population (2000 families) which had won his sympathies by expelling the Turkish garrison during the Turco-Persian war, to Persia, chiefly to the capital Iṣpahān and thereby introduced a new element into the population of his kingdom, of great value for their industrious habits. The Armenian town destroyed by 'Abbās I soon became utterly deserted and it was not till the beginning of the xviiith century that a few families settled among its ruins; at the present day there are only a few score houses besides a few customs-offices inhabited by Russians and barracks for Cossacks, as Djulfa is a station on the frontier; on the southern (Persian) side of the Araxes is the Persian frontier and a khān. Considerable ruins of the town (including 20 churches) still exist; the large cemetery with its thousand of tombs of former inhabitants is celebrated. The remains of a splendid bridge, which is traced back to Roman times, may be mentioned; over it most of the traffic between Persia and Armenia (especially to Eriwān and Tiflis) crossed the Araxes. To distinguish it from the Armenian colony in Iṣpahān, which also bore the name Djulfa, the original Armenian town is now usually called Eski-Djulfa (= Old Djulfa).

The Armenian colony in Iṣpahān, New-Djulfa, quickly developed into an important suburb with flourishing commerce and industries. There can be no doubt that the industrious, enterprising and wealthy Armenians laid the foundations of Iṣpahān's great trade and wealth. In their new home the Armenians enjoyed absolute freedom of religion; they built 24 splendid churches there, of which half still exist. The flourishing period of this colony lasted a century after which its importance and prosperity gradually began to decline. At the present day the suburb of Djulfa, which has extensive gardens, has only a few thousand Armenian inhabitants.

(M. Streck.)

DJUM'A, i. e. the day of "general assembly" is Friday, because it is a religious obligation on Muslims to attend on this weekly holy day the divine service, corresponding to the daily midday ṣalāt (*ṣalāt al-ẓuhr*). The Friday ṣalāt itself is also called *djum'a*. Even in the Ḳor'ān (lxii. 9) it is expressly ordained in a sūra revealed at Medina. "When ye are called to the Friday ṣalāt, hasten to the praise of Allāh and leave off your business". It is by reason of this verse in the Ḳor'ān that attendance at the Djum'a is regarded as a duty binding on all male, adult, free Muslims, at least as far as they are legally considered residents in the locality (*muḳīm*). Apart from this the weekly holy day of Islām is not a day of rest and is thus essentially different from the Jewish Sabbath or the Christian Sunday.

The Friday service consists of a common ṣalāt of two rak'a's and a sermon, which is delivered

by the Khaṭīb before this ṣalāt. But it is considered meritorious and is the usual practise to perform another ṣalāt of two rak'a's before the khuṭba also. For a djum'a to be valid, there must, according to the Shāfi'ī school, be at least 40 Muslims present, who are legally entitled to take part in the worship of God. The Ḥanafīs and Mālikīs do not however adhere to the number 40; they say that the service should only be held in a town or community of some size. According to the Shāfi'īs and most of the other Faḳīhs it is further illegal to hold the Friday service in more than one mosque in the same place, except in cases of necessity, when it is impossible for all the inhabitants to meet in one building.

It may be presumed that Muḥammad himself used to hold a common ṣalāt with a sermon, after the Jewish fashion, in the court of his house in Medina on Fridays. Possibly he used to begin with the ṣalāt which was followed by the address, just as in other assemblies of the same kind in older times a common ṣalāt preceded the discharge of other business. At the Friday service in the great military camps of the Muslims after the death of Muḥammad, the Umaiyads and their governors used to appear with all the symbols of their rank and conduct the service. The individual tribes used at that time to meet in a masdjid of their own in camp, but the Umaiyads endeavoured to unite them in one common mosque. It is probably from this period, that the commandment against holding the djum'a outside a town and holding it in more than one mosque dates.

In the later Umaiyad period the ceremonies at the Friday service became more and more influenced by the Christian service. Thus the ceremonial adhān (which is held on Friday in the mosque, after the faithful are gathered there, before the sermon) and the peculiar form of the khuṭba, in two sections before the Friday Ṣalāt seem to have arisen under influence the Christian mass. The professional preacher gradually came to take the place of the Caliph and his representatives as conductor of the service.

(M. SOBERNHEIM.)

DJUMBLĀT. [See DJĀNBULĀṬ, p. 1014ᵃ.]

DJUMLA (A.; properly „aggregate, sum, total"), a technical term in Arabic grammar = sentence. The word in this sense is synonymous with *kalām*. On the latter al-Zamakhsharī says (*Mufaṣṣal*, p. 4, 15—17): "A *kalām* is composed of (at least) two words, which stand to one another in the relation of subject and predicate". A single word as for example the imperative *ḳum* (stand!) can of course form a complete sentence; but in this case the subject (here: thou) is understood. — On the various kinds of sentences (nominal, verbal, adverbial, categorical, interrogative etc.) see the grammars and more especially the detailed treatment of the question in Muḥammad A'lā, *Dictionary of Technical Terms* (ed. Sprenger and others), i. 245—250.

(A. SCHAADE.)

DJŪNĀGAṚH, native state in the peninsula of Kāṭhiāwār, W. India; area, 3,284 sq. m.; pop. (1901), 395,428, of whom 22% are Musalmans; revenue, about £ 180,000. It takes its name from the "old fort", or Uparkot, which contains Buddhist caves and a mosque built by Sulṭān Maḥmūd Bēgaṛa (end of xvᵗʰ cent.), who named the modern town, which contains a college and other fine buildings, Muṣṭafābād. The state was founded about 1735, on the decline of Mughal authority, by Shēr Khān Bābī, Paṭhān. The territory includes the Gir forest, where alone the lion is now to be found in India; the hill of Girnār, sacred to the Djains; the ruined Hindu temple of Sōmnāth plundered by Maḥmūd Ghaznawī in 1026; and the seaport of Vērāval, which was the principal port of embarkation for ḥadjdjīs during the rule of the Sulṭāns of Gudjarāt [q. v.]. This state is one of the few in British India that still issues its own coin.

(Bombay, 1897.)

(J. S. COTTON.)

AL-DJUNAID B. 'ABD AL-RAḤMĀN, a governor appointed by the Caliph Yazīd II. to the Muslim possessions in India; he was dismissed after a brief tenure of office. In 107 (725-726) Khālid b. 'Abd Allāh al-Ḳasrī who was then governor of Khorāsān, sent him back to India. When he reached the Indus, he attacked the Indian ruler Ibn Dhāhir, who had adopted Islām a long time before and been recognised by 'Omar II. as ruler of these lands, took him prisoner and put him to death. Some authors accuse al-Djunaid of treachery to Ibn Dhāhir; the details are not quite clear, but it is at least certain that al-Djunaid had his brother, who was going to the 'Irāḳ, to complain of his faithless conduct, secretly murdered.

During his stay in India he undertook several successful expeditions, on which he won rich booty. In the year 111 (729-730) Ashras b. ʿAbd Allāh al-Sulamī, governor of Khorāsān, who had come into conflict with the Soghdians and the Turks, was dismissed and al-Djunaid appointed his successor. He hurried with all possible speed to the help of Ashras and joined forces with him in Bukhārā. The Turks were defeated at Zarmān near Samarkand and the Arab army brought back to Khorāsān. In the following year al-Djunaid again prepared for a campaign against Tukhāristān. He had already sent several bodies of troops off by various routes, when the governor of Samarkand, Sawra al-Ḥurr, sent him warning that the Turks were threatening this town and that he could not drive them back without reinforcements. Al-Djunaid at once sent out, crossed the Oxus and reached Kiss. From there two routes led to Samarkand, the one across the steppe and the other through the mountains. He chose the latter on account of the heat of summer, but was ambushed by the Turkish Khākān in a ravine near Samarkand and had to ask Sawra's help. The latter hurried up but was attacked by the enemy and slain with the greater part of his army. Al-Djunaid was however enabled to continue his march and enter Samarkand. The Khākān then turned his attention to Bukhārā and laid siege to the town, but was defeated in Ramaḍān 112 or 113 (November 731) at al-Ṭawāwīs, and al-Djunaid entered Bukhārā. Meanwhile the Caliph Hishām had had to send him 20,000 more men from Baṣra and Kūfa; they met him on the march and were sent to Samarkand. Early in 116 (spring of 734) al-Djunaid was dismissed; he had incurred the Caliph's wrath by his marriage with al-Fāḍila, daughter of the rebel Yazīd b. al-Muhallab. ʿĀṣim b. ʿAbd Allāh al-Hilālī was appointed his successor; but al-Djunaid died in Merv of dropsy before the latter arrived in Khorāsān.

Bibliography: Ṭabarī (ed. de Goeje), ii. see Index; Ibn al-Athīr (ed. Tornberg), iv. 466; v. 93—139; Balādhorī (ed. de Goeje), p. 429, 442, 443; Weil, *Geschichte der Chalifen*, i. 629—635; Wellhausen, *Das arabische Reich*, p. 286 *et seq.* (K. V. Zetterstéen.)

DJUNAID b. Ibrāhīm, one of the ancestors of the Ṣafawids [q. v.], father of Sulṭān Ḥaidar. Djunaid lived like his father in Ardabīl but, as his religious and political views seemed dangerous, he was banished by Djahānshāh, the chief of the Ḳara-Ḳuyūnlī at that time. He then went to Diyārbakr and married a sister of Uzūn Ḥasan [q. v.], the chief of the Aḳ-Ḳuyūnlī. The reputation as a Ṣūfī saint, which he has in common with his ancestors and his son Ḥaidar, was not however affected by these political alliances. He was slain in battle with the forces of the lord of Shirwān in 860 = 1456.

Bibliography: see the article ṢAFAWIDS.

DJUNAID, Abu 'l-Ḳāsim b. Muḥammad b. al-Djunaid al-Khazzāz al-Ḳawārīrī, a celebrated Baghdād mystic: he belonged to a family hailing from Nahāwand and was the nephew of Sarī al-Saḳaṭī. He studied law with Abū Thawr, the pupil of al-Shāfiʿī. He made the pilgrimage to Mecca alone and on foot thirty times; he died in Baghdād in 297 (910) and was buried in the Shūnīzīya cemetery beside the mausoleum of his uncle. When some one expressed surprise that he should hold a rosary in his hand in spite of his great reputation for sanctity, he replied "I will not renounce the path that has led me to God". The use of a rosary was to him one of the means of attaining a state of ecstasy. He was known as *Saiyid al-Ṭāʾifa* "lord of the sect" and *Ṭāʾūs al-ʿUlamāʾ* "peacock of the learned". He admitted the superiority of prophets to saints and opposed the divine presence (*ḥuḍūr*), of which the former give us information, to the contemplation (*mushāhada*) of the latter. He preferred sobriety to mystic intoxication of the soul. In theology, he maintained that the knowledge of God only came from demonstrative reason. His pupils and followers are called Djunaidīs.

Bibliography: Djāmī, *Nafaḥāt al-Uns* (S. de Sacy, *Notices et Extraits*, Vol. xii.); Ibn-Khallikān, n°. 143 (= *Biographical dictionary*, i. 338); Farīd al-Dīn ʿAṭṭār, *Tadhkirat al-Awliyā*, ii. 5 *et seq.*; Pavet de Courteille, *Mémorial des Saints*, p. 200; al-Hudjwīrī, *Kashf al-Maḥdjūb* (transl. DJUNAID, a clever and cunning adventurer, said to have been a member of the royal family of Aidinoghlu (Leunclavius, *Hist. Mus.*, 531, ʿĀshiḳpashazāde, p. 78), was born in Smyrna, where his father, the "Karasubashi" i. e. the chief magistrate (according to Djunaid's coins his name was Ibrāhīm), had been given an office by Bāyazīd I. After Tīmūr's retreat from Asia Minor, Djunaid rose against the native rulers who had been restored by Tīmūr, the Aidinoghlu ʿĪsā and ʿOmarbeg, and deposed them with the help of Mīr Sulaimān Čelebi, Bāyazīd I's eldest son who lived in Adrianople (1405 and 1406). According to the Turkish annalists (Leuncl. l. c. 413—416; ʿAlī *Kunh al-Akhbār*, v. 156; Saʿd al-Dīn, i. 283 *et seq.*) he gave his support to ʿĪsā Čelebi, a son of Bāyazīd I., who was favoured by Mīr Sulaimān in his struggle with his brother Meḥemmed Čelebi, but was defeated by Meḥemmed Čelebi, who did not however deprive him of his power. He next came into conflict with Mīr Sulaimān who advanced against him with an army; abandoned by his allies, the Karamanoghlu and Germianoghlu, he submitted to the Sulṭān. The latter deprived him of his territory and took him with him to Europe where he was appointed governor of Ochrida. Soon afterwards Mīr Sulaimān was attacked by his brother Mūsā Čelebi and met his death in battle with him (1410). Djunaid took advantage of the confusion to return to Asia Minor; with a body of his old followers from Smyrna and Tyre, he drove out the governor of Ephesus appointed by Mīr Sulaimān and soon regained his former power. Meḥemmed Čelebi, who overthrew Mūsā Čelebi in 816 (1413), after restoring order in Rumelia, turned against Djunaid, stormed his strongholds (Kyme, Kayadjik, Nīf) and advanced on Smyrna which surrendered after a ten days' siege. Djunaid, who had not dared risk a pitched battle, submitted, but was dispossessed by the Sulṭān, receiving the governorship of Nikopolis in compensation. The Turkish sources, which mention neither this campaign which is presumably to be placed in 881 (1415) nor the previous one with Mīr Sulaimān, tell us that the Sulṭān forced Djunaid in 814 (1411-1412) to recognise his suzerainty and his claim to have

his name inserted in the sermon (*khuṭba*) and to strike coins (Leuncl., l. c. 449—451; ʿAlī, l. c. 167; Saʿd al-Dīn., i. 261). In 822 (1419) a usurper appeared in Wallachia who claimed to be Muṣṭafā, the son of Bāyazīd I. who had disappeared in the battle of Angora. Djunaid took his side and fled with him to Saloniki, pursued by Meḥemmed I., where the Byzantine governor afforded asylum to the fugitives. At the Sulṭān's request the *soi-disant* Muṣṭafā was interned by the Emperor on the island of Lemnos and Djunaid in a monastery in Constantinople. After the death of Meḥemmed I. the Emperor set up Muṣṭafā as a claimant to the throne against Murād II; Muṣṭafā, who had made Djunaid his vizier, seized Rumelia and advanced against Murād, who had come from Amasia and was awaiting his opponents at Ulubad (Lopadion). While there Murād succeeded in persuading the Rumelian Begs, who had taken the pretender's side, to desert him; Djunaid followed this example and left Muṣṭafā to his fate (1422). Accompanied by a few followers, he reached Smyrna, where the inhabitants received him with open arms. With the poorly armed troops he raised in the Erythraean peninsula, he defeated and slew the Aidinoghlu Muṣṭafā and soon regained the territory he had once ruled; he prepared a place of refuge for all eventualities in his castle of Ipsili (Ὕψηλα) on the coast opposite Samos. As soon as the state of his kingdom allowed it, the Sulṭān turned his attention to this dangerous usurper. A Turkish army invaded Ionia; Djunaid's son, Ḳurd Ḥasan was defeated and taken prisoner at Aḳḥiṣār (Thyatira); he himself retired to Ipsili and made an unsuccessful attempt to obtain help from the Karamanoghlu; after a long siege and only when Genoese ships were threatening the town from the sea, he decided to submit and was beheaded with all his relatives in the Turkish camp; his son Ḳurd Ḥasan and brother Ḥamzabeg, who were prisoners on the Dardanelles, were executed at the same time. According to the Turkish sources, there were two campaigns against Djunaid, the first in the year 827 (1424), according to the so-called Chronicle of Verantius, the second a year or two later (Leuncl., l. c. 506 *et seq.*, 531 *et seq.*; ʿĀshiḳpashazāde, p. 78; ʿAlī, *Kunh*, v. 203; Saʿd al-Dīn, i. 324 *et seq.*).

Bibliography: The chief source is Dukas, *Chronicle*, p. 79—89, 96 *et seq.*, 103—121, 134, 139—156, 165—176, 190—196; also isolated notices in Chalkokondylas, p. 204, 223 *et seq.*; in addition to the Turkish historians already quoted, cf. Ferīdūn, i. 139 *et seq.*, 161. Djunaid (in Dukas: Τζινεήτ, in Chalkokondylas: Ζουναΐτης, *Zinayd* in Schiltberger, p. 14) is usually called Izmiroghlu 'the Smyrniot' by Turkish writers, but sometimes also *Ḳara-djunaid*. On the very rare coins (unpublished, in my collection), on which the name of the Sulṭān 'Meḥemmed (son) of Bāyazīd' appears, and which were probably struck in 813 A. H., he calls himself Ghāzī Djunaid; on the equally rare coin dating from his last usurpation with the date 825 [S. Lane-Poole, *The Coins of the Turks*, (*British Museum Catalogue of Oriental Coins*, Vol. viii.), p. 32] his name is given as 'Djunaid (son) of Ibrāhīm' in a Tughra. (J. H. MORDTMANN.)

DJUND (A.; cf. Fränkel, *Die aram. Fremdwörter*, p. 238) "regular army", used in the Ḳorʾān in the sense of the New Testament λεγεών, was used after the Muslim conquest of Syria to designate five military districts, a division based on the Byzantine division into themes, each occupied by one legion. These were Filasṭīn, Urdunn, Dimashḳ, Ḥimṣ and Ḳinnasrīn; Mesopotamia was attached to the latter but separated by ʿAbd al-Malik b. Marwān. Ḳinnasrīn at first belonged to Ḥimṣ, till Yazīd I. b. Muʿāwiya formed a new djund to include this town, Anṭākiya and Manbidj. Hārūn al-Rashīd separated Ḳinnasrīn from the other places when he founded a separate Djund al-ʿAwāṣim [q. v., p. 515 *et seq.*] which included Cilicia.

Bibliography: Yāḳūt, *Muʿdjam*, i. 136. (CL. HUART.)

DJUNDAI-SĀBŪR, a town in Khūzistān, founded by the Sāsānid Shāpūr I. (whence the name *wandēw Shāpūr* "conquered by Shāpūr", cf. Nöldeke, *Geschichte der Perser* etc., p. 41, note 2), who settled it with Greek prisoners. It is the town known as Bēth-Lāpāṭ in Syriac, corrupted to Bīl-Ābādh, now almost unrecognisable in the forms *nīlāb* and *nīlāṭ*; the site is marked at the present days by the ruins of Shāhābād (cf. Rawlinson in the *Journ. of the Royal Geogr. Soc.*, ix. 72; de Bode, *Travels in Luristan*, ii. 167). The town was taken by the Muslims in the caliphate of ʿOmar by Mūsā al-Ashʿarī in 17 = 738, after the occupation of Tustar; it was surrendered (Balādhurī, p. 382). Saif b. ʿOmar's story in Ṭabarī, i. 2567, and Ibn al-Athīr, ii. 432, according to which the fall of the town was the result of a mistake made by the slave Muknif, seems to be a romantic fiction. The skin of Mani, the founder of a sect, was hung on a gate of the city. Djundai-Sābūr was celebrated for its school of medicine founded by Khosraw I., where Hellenistic science was taught in the Aramaic language; it survived down to the ʿAbbāsid period. The town was the capital of Yaʿḳūb b. Laith al-Ṣaffār (262-265 = 875—877), who died there in 265 = 878. In Yāḳūt's time only a few ruins marked the site of the town (ii. 130).

Brockelmann, *Geschichte der arab. Litteratur*, i. 201; Ṭabarī, i. 2567; Ibn al-Athīr, vii. 201, 213, 231; Wüstenfeld, *Jâcût's Reise*, *Zeitschr. d. Deutsch. Morgenl. Ges.* xviii. 425. (CL. HUART.)

DJUNNAR, town in W. India, 56 m. N. of Poona: pop. (1901), 9,675. In the neighbourhood are many Buddhist caves, and the hill-fort of Shivnēr where Sivadjī (v. p. 519) was born. The town was brought under Muḥammadan rule in 1436 by Malik al-Tudjdjār, the leading Bahmanī noble, and it was long the capital of a Muhammadan province. The governor was visited by Fryer, an English doctor from Bombay, in 1675. The chief buildings are the Djāmiʿ Masdjid, contemporary with the foundation of the town; a mosque dating from the time of Shāh Djahān; and two fine dargāhs. As often in former Musalman head quarters, a manufacture of paper still survives.

Bibliography: *Gazetteer of the Bombay Presidency*, xviii. (Part iii.) 149 sqq. (J. S. COTTON.)

DJŪR. [See FĪRŪZĀBĀD.]

DJURADJIMA. [See DJARĀDJIMA.]

DJURAIDJ, a saint, whose story is said to have been related by the Prophet himself and has

therefore found a place in the Ḥadīth. The various versions differ in details from one another, but one motif is common to them all, viz. that the saint is accused by a woman, who had had a child by another man, of being the father, but the child itself on being asked by the saint, declares the real father's name and thus clears the saint from suspicion. "Djuraidj" is the Arabic reproduction of Gregorius and one version rightly states that he lived in the period without a prophet (*fatra*) between Jesus and Muḥammad. There is a similar episode in the biographies of Gregorius Thaumaturgus and we may safely assume that this story became known among Muslims through Christians, till finally it was accepted in the Ḥadīth.

(J. Horovitz.)

DJURʾAT, the poetical name of Shaikh Ḳalandar Bakhsh, a distinguished poet of Dilhī. His real name was Yaḥyā Amān, and that of his father Ḥāfiẓ Amān. His ancestors received the title of Amān from the emperor Akbar. One of them, Rāʾī Amān was slain at the sack of Dilhī by Nādir Shāh in A. D. 1739, and the street in which he lived is still called after his name.

Djurʾat at first took service with Nawwāb Maḥabbat Khān, son of Ḥāfiẓ Raḥmat Khān Nawwāb of Bareilly. In A. H. 1215 (A. D. 1800) he settled at Lucknow, and enjoyed the patronage of Mīrzā Sulaimān Shikūh, son of the emperor Shāh ʿĀlam, and died in that city in A. H. 1225 (A. D. 1810). He studied poetry under Mīrzā Djaʿfar ʿAlī Ḥasrat, and was also skilled in music and astrology. According to Nassākh (*Sukhan-i shuʿarā*, p. 102) Djurʾat lost his eyesight from an attack of small-pox when he was only 19 years of age. Selections from his Dīwān have been published at Agra (1897) as part of a series, entitled *Mukhtār-i ashʿār*, published under the editorship of Saiyid Ḥusain Bilgrāmī. A copy of his *Kulliyāt* or complete works, is in the Library of the British Museum.

(J. F. Blumhardt.)

DJURDJĀN, Old Persian Wrkāna, Modern Persian Gurgān (Byzantine Γόργα), the ancient Hyrcania, at the southeast corner of the Caspian Sea, which is therefore also known as *Baḥr Djurdjān* (Mare Hyrcanum).

The province, which was practically equivalent to the modern Persian province of Astarābādh [q. v., p. 493 *et seq.*], forms both in physical features and climate, a connecting link between subtropical Māzandarān with its damp heat and the steppes of Dahistān in the north. The rivers Atrek [q. v., p. 512ᵇ *et seq.*] and Djurdjānrūd, to which the land owes its fertility and prosperity, are not an unmixed blessing on account of their inundations and the danger of fever which results.

Djurdjān played an important rôle in the Sāsānid period as it was the frontier province against the nomads pressing in from the north. The fortresses of Shahristān-i Yezdgerd and Shahr-i Pērōz (see Marquart, *Ērānšahr*, p. 51 and 56) were built as a defence against the nomads of the steppes of Dahistān (*Sūl*, *Čōl*; cf. Hoffmann, *Auszüge aus syr. Akt. pers. Mart.*, p. 277 *et seq.*); a long wall was built along the northern frontier to defend the lands (cf. *Bibl. Geogr. Ar.*, vi. 261 *et seq.*; Vámbéry, *Reise in Mittelasien*², p. 45 *et seq.*

Saʿīd b. al-ʿĀṣ is said to have levied tribute from the "Malik" of Djurdjān as early as the year 30 A. H.; but the real conquest of the land was the work of Yazīd b. al-Muhallab (98 = 716). At that time the lord of Djurdjān was a Marzbān but the actual power seems to have been in the hands of a Turkish chief Ṣūl (cf. Wellhausen, *Arab. Reich*, p. 278 *et seq.*).

After punishing the unruly population of the valley of the navigable Andarhāz, the modern Djurdjānrūd, Yazīd founded the town of Djurdjān, which henceforth was the capital of the province (Yāḳūt, ii. 48 *et seq.*). Djurdjān must have been a very prosperous place in the third (ixᵗʰ) and fourth (xᵗʰ) centuries. The gardens around it, irrigated by the waters of the river, are celebrated; its chief product was silk. Djurdjān was also a station on the route of caravans to Russia. (*Bibl. Geogr. Arab.*, vi. 154). The town was divided into two parts by the river which was crossed by a bridge; on the eastern side was the town proper, Shahrastān, whose nine gates are detailed by Muḳaddasī and on the western, the suburb Bakrābādh (called after a settlement of the Arab tribe?). Cf. *Bibl. Geogr. Arab.*, i. 212 *et seq.*; ii. 272 *et seq.*; iii. 357 *et seq.* The prosperity of the town seems to have been early threatened by internal dissensions. The ʿAlid propaganda had found a congenial soil in the lands on the Caspian Sea and the ʿAlid dynasty of Ṭabaristān included Djurdjān in its sphere of influence. In Djurdjān itself the tomb of Muḥammad b. Djaʿfar al-Ṣādiḳ was an object of great reverence (Ḳazwīnī, ii. 378). The constant unrest in these lands enabled Mardāwīdj b. Ziyār in 316 = 928 to found a kingdom of his own in Djurdjān with the help of the Dailamites, which survived for over a hundred years, although nominally dependent on the Sāmānids and later the Ghaznawids (cf. the article ziyārids). The dome-shaped tomb of the ruler Ḳābūs b. Washmgīr (366—403 = 976—1012) still exists as a memorial of this period.

The Mongol invasion seems to have brought about the ruin of the town. Mustawfī (cf. *Journ. R. As. Soc.*, 1902, p. 745 *et seq.*) describes it in the viiiᵗʰ (xivᵗʰ) century as a heap of ruins. Although Tīmūr is said to have built a palace in 795 = 1393 (according to Ḥāfiẓ-i Abrū, cf. G. Le Strange, *Eastern Caliphate*, p. 378) on the bank of the river, Djurdjān never again attained its former prosperity. Ḥādjdjī Khalīfa, *Djihānnumā* (Constantinople 1145), p. 339, however, mentions Djurdjān, which had been rebuilt since the Mongol period, as inhabited by fanatical Shīʿites.

Djurdjān's situation in the angle at the confluence of the Djurdjānrūd and the Sumbar is only marked by mounds of ruins which have not yet been investigated. Only the Gumbadh-i Ḳābūs about 2 miles to the northeast, and about ½ mile south of the river has resisted the weather and the hand of man to the present day.

Bibliography: The *Kitāb Maʿrifat ʿUlamāʾ Djurdjān* of Ḥamza b. Yūsuf al-Sahmī (died 427 = 1036), preserved in Oxford (*Bibl. Bodl. Cod. Cat.*, i. 746) might probably contain valuable material. — In addition to the works

quoted in the article ASTARĀBĀDĪ cf. Marquart, *Ērānšahr*, p. 72 *et seq.*; G. Le Strange, *Eastern Caliphate*, p. 376 *et seq.*; C. E. Yate, *Khurasan and Sistan*, p. 239 *et seq.* — compare the translation, given here on p. 231, of the inscription in Gunbādh-i Ḳābūs with the text given by Dorn, *Caspia*, p. 91 from Djannābī — cf. also W. Barthold, *Iran*, p. 80 and *Turkestan*, i. 63, where al-Sam'ānī is quoted and a minute account by the Russian Poslavski is mentioned.

(R. HARTMANN.)

AL-**DJURDJĀNĪ**, 'ALĪ B. MUḤAMMAD AL-SAIYID AL-SHARĪF, an Arab theologian and philosopher born in 740-1339 in Tādjū near Astarābādh, received a lectureship in Shīrāz in 779 (1377) from Shāh Shudjā' b. Muḥammad Muẓaffar, to whom he had been introduced through al-Taftāzānī. When Tīmūr took this town in 789 (1387), he sent him to Samarḳand. On Tīmūr's death in 807 (1404) he was able to return to Shīrāz and died there in 816 = 1413. He wrote a large number of philosophical pamphlets in Arabic — some also in Persian —, commentaries on the best known textbooks on Fiḳh, philosophy and astronomy (a list of his works is given in the Ms. in Ahlwardt, *Verzeichnis der Ar. Hds. der Kgl. Bibliothek zu Berlin*, N°. 17, 2). The following have been printed: 1. *Kitāb al-Ta'rīfāt, Definitiones viri meritissimi Sejjid Scherif Ali ben Mohammed Dschordschani, accedunt definitiones theosophi Mohji-ed-din Mohammed ben Ali vulgo Ibn Arabi dicti*, ed. et adnot. crit. instruxit Gustavus Flügel, Lipsiae 1845, also Stambul 1837, Cairo 1283, 1306, St. Petersburg 1897. 2. Glosses on the *Kashshāf* of Zamakhsharī, on the margin of the editions Cairo 1307, 1308, 1318. 3. Commentary on the 3rd part of the *Miftāḥ al-'Ulūm* of al-Sakkākī, *'Ilm al-Ma'ānī wa 'l-Bayān*, Stambul 1241. 4. Glosses to al-Taftāzānī's *al-Sharḥ al-muṭawwal* on Ḳazwīnī's *Talkhīṣ al-Miftāḥ*, Stambul 1241. 5. Commentary on the *al-Farā'iḍ al-Sirādjiya* of al-Sadjāwandī, Kasan 1889, 1894. 6. Glosses entitled *Ḳudjak* on Ḳuṭb al-Dīn al-Rāzī al-Taḥtānī's Commentary on *al-Risāla al-Shamsiya fi 'l-Ḳawā'id al-Manṭiḳiya* of al-Kātibī, Calcutta 1261, Lucknow 1883. 7. Glosses on al-Bukhārī's Commentary on the *Kitāb Ḥikmat al-'Ain* by the same author, Calcutta 1845. 8. Commentary on al-Īdjī's *Kitāb al-Mawāḳif fi 'Ilm al-Kalām*, Stambul 1239. 9. *al-Uṣūl al-Manṭiḳiya* as N°. 13 of the *Madjmū'at Rasā'il* (Cairo 1328).

(C. BROCKELMANN.)

DJURDJĀNĪ FAKHR AL-DĪN AS'AD, a Persian poet, author of the romantic epic *Wīs u Rāmīn* (ed. Calcutta 1865 in the *Bibl. Ind.*). We know nothing of the events of his life except that he composed the poem at the request of Abu 'l-Fatḥ al-Muẓaffar, who seems to be identical with the 'Amīd of that name mentioned in Ibn al-Athīr, x. 23, so that he must have lived about the middle of the xith century.

AL-**DJURDJĀNĪ**, ISMĀ'ĪL B. AL-ḤUSAIN ABU 'L-FAḌĀ'IL, an Arab physician, died 530 = 1135, composed in addition to smaller works two textbooks of medicine, one for 'Alā' al-Dīn 'Alī Arslān entitled *al-Tadhkira al-Ashrafiya fi 'l-Ṣinā'a al-Ṭibbiya* (see de Slane, *Catalogue des Mss. Arab. de la Bibl. Nat.*, N°. 29, 29955) and for the Khwārizmshāh the *Dhakhīrat Khwārizmshāh* (*Yeni Djāmi' Kutubkhānesinde maḥfūẓ kutub mewdjūdesinin defteri*, N°. 915, 916); see Wüstenfeld, *Arab. Ärzte*, N°. 165; Brockelmann, *Gesch. d. arab. Lit.*, i. 487.

(C. BROCKELMANN.)

AL-**DJURDJĀNĪ**, NŪR AL-DĪN MUḤAMMAD, son of 'Alī al-Djurdjānī (see above), died 838 = 1434 in Shīrāz, translated a treatise on logic written in Persian by his father, wrote a commentary on his *Risāla fi 'l-Uṣūl*, and on Taftāzānī's grammar *Irshād al-Hādī* and wrote *al-Ghurra fi 'l-Manṭiḳ*, on which al-Ṣafawī (died 953 = 1546) wrote a commentary (see de Slane, *Catalogue des mss. ar. de la Bibliothèque Nationale*, N°. 2397).

Bibliography: Khwāndamīr, *Ḥabīb al-Siyar*, iii. 3, 147; Brockelmann, *Ar. Lit.* ii. 210.

DJURDJĀNIYA. [See GURGANDJ.]

DJURHUM or DJURHAM, Γερραιοι in Steph. Byz., an ancient Arabian tribe, who according to tradition once lived in Mecca, whither they had migrated from the Yaman. They must have been exterminated by some catastrophe at quite an early date, for a poet, a contemporary of the Prophet, (Ibn Hishām, p. 468, 11 cf. also *Kāmil*, ed. Wright, 445, 1) held them up as a warning to the Ḳuraishites along with 'Ād. Later genealogists therefore reckon them with the 'Amālīḳ, 'Ād, Thamūd etc., among the prehistoric, original Arabs (the *'Arab al-'Āriba*), whose descent they trace from 'Ābar ('Eber) and who had utterly disappeared, with the exception of the Ḳaḥṭānids, whom others, however, have reckoned among the Ismaelites. The Djurhumids had however not entirely disappeared, for Ḥassān b. Thābit mentions remnants of them (*Dīwān*, ed. Cairo, p. 131; Ibn Hishām, p. 251), and even as late as the second century A. H., a few families of them lived on the coast of Mecca. The statement (Ṭabarī, ed. de Goeje, i. 749), that the Banū Libyān were the survivors of the Djurhum, is a genealogical fiction.

According to the Arab story, the Djurhumids who were related to Ismā'īl by marriage, once ruled in Mecca and had authority over the Ka'ba till they were driven out by the Khuzā'a for their wickedness. The legends associated with this event are of course all quite worthless, but there must be some historical foundation for the tradition. The poet Zuhair (*Mu'allaḳa*, v. 16) swears by the house, that men of Ḳuraish and Djurhum had built and which they remodelled; and similarly another poet A'shā swears by the (sanctuary) that Ḳuṣaiy and Ibn Djurhum built. This testifies to the participation of the Djurhumites in the building of the Ka'ba, but in a way, which does not well agree with the later view of a line of successive rulers in Mecca, ending in the Ḳuraishites.

(Fr. Buhl.)

DJUWAIN is the name of several localities in Īrān.

1. A village in Ardashīr Khurra, five farsakh from Shīrāz on the road to Arradjān, usually called Djuwaim, the modern Goyum, cf. G. Le Strange, *Lands of the Eastern Caliphate*, p. 253; P. Schwarz, *Iran im Mittelalter*, p. 44, 173, 179 (not to be confused with Djuwaim Abī Aḥmad in the province of Dārābdjird, the modern Juwun, see G. Le Strange, *op. cit.*, p. 254; P. Schwarz, *op. cit.*, p. 102 and 201).

2. Djuwain (also written Gūyān) a district in the Nīshāpūr country, on the caravan road from Bisṭām, between Djādjarm and Baihaḳ (Sabzewār). The district, whose capital is given as Āzādhwār, later Farīyūmad (see *Journ. R. As. Soc.*, 1902, p. 735) contained 189 villages according to Yāḳūt, ii. 164—166, whose information is taken from Abu 'l-Ḳāsim al-Baihaḳī; they were all in the northern half, while the southern half was unsettled; cf. G. Le Strange, *Eastern Caliphate*, p. 391 *et seq.* The plain of Djuwain enclosed on the north and south by ranges of hills, still forms a district of Sabzewār with about 65 townships, which lie along the river Djuwain in a long series. In the middle of the valley near the village of Āzādhwār, lie the ruins of the ancient capital. The modern centre is Jugatai (Čaghatāi) which is situated to the southeast of it, at the foot of the hills on the south; cf. MacGregor, *Khorasan*, ii. 145, 225; C. E. Yate, *Khurasan and Sistan*, p. 380 *et seq.*

3. Djuwain or Guwain, a fortified place in Sidjistān, 2-3 miles N. E. of Lāsh on the Farāhrūd, appears under its modern name in ancient (see Marquart, *Ērānšahr*, p. 198; *Tafsīr* with Emendation on Isidorus of Charax) and early mediaeval itineraries (Iṣṭakhrī, p. 248; Ibn Ḥawḳal, p. 304). The importance of the sister towns of Lāsh and Djuwain still rests on the fact that the roads from Kandahār and Herāt from the Afghān side and those from Meshhed, Yazd and Naṣīrābād, from the Persian meet here. The Arab geographers say that Djuwain on the road from Herāt to Zarandj was a Khāridjī stronghold (Muḳaddasī, p. 306; Ibn Rusta, p. 174).

Djuwain, built on a slight elevation in the centre of a fertile plain covered with ruins, and surrounded by a quadrangular wall of clay, forms a striking contrast to the rocky stronghold of Lāsh; it appears to have considerably declined in the second half of the last century. While Lāsh is occupied by a garrison for the Amīr of Afghānistān, Djuwain is occupied by a chief of the Sakzai (Ishākzai)-Afghāns, besides whom it contains a number of Ḳizilbash. Cf. G. Le Strange, *Eastern Caliphate*, p. 341 *et seq.*; Euan Smith in *Eastern Persia*, i. 319 *et seq.*; A. C. Yate, *England and Russia face to face in Asia*, p. 99 *et seq.* (R. Hartmann.)

al-**DJUWAINĪ**, 'Abd Allāh b. Yūsuf, a Shāfi'ī Faḳīh who studied with his father in Djuwain and afterwards in Nīsābūr and Merv and settled in Nīsābūr in 407 = 1016. He received a teaching appointment there and enjoyed such a reputation that it was said of him, as in a later period of al-Ghazālī, that, if there could be a prophet after Muḥammad, it would be he. Of his works there has only survived the *Kitāb al-Djam' wa 'l-Farḳ* (see Ahlwardt, *Verzeichnis der ar. Hdss. der Kgl. Bibliothek zu Berlin*, N°. 4811; *Fihrist al-Kutubkhāne al-Khedīwiya*, iii. 215).

Bibliography: Ibn Khallikān, *Wafayāt al-A'yān* (ed. Būlāḳ 1299), N°. 308; Subkī, *Ṭabaḳāt*, iii. 208—219; Wüstenfeld, *Schāfi'iten*, N°. 365ª; Brockelmann, *Gesch. der ar. Lit.*, i. 386. (C. Brockelmann.)

al-**DJUWAINĪ**, Abu 'l-Ma'ālī 'Abd al-Malik, son of the preceding, celebrated by the honorary name of Imām al-Ḥaramain, was born in the 18th Muḥarram 419 = 12th Febr. 1028 in Bushtanikān, a village near Nīsābūr, and succeeded to his father's post on his death, though not yet 20 years old. In dogmatics he adopted the teaching of al-Ash'arī. When 'Amīd al-Mulk al-Kundurī, the vizier of the Saldjūḳ Ṭughrilbeg, took steps against these dogmatic innovations and had their protagonists like the Rawāfiḍ cursed from the pulpits, he left his native town with Abu 'l-Ḳāsim al-Ḳushairī, went first to Baghdād and thence in 450 = 1058 to the Ḥidjāz, where he taught for four years in Mecca and Medina, whence his honorary name. When the vizier Niẓām al-Mulk had risen to power in the Saldjūḳ empire, he favoured the Ash'arīs and requested the refugees to return. Al-Djuwainī was among those who returned to Nīsābūr (*Zeitschr. d. Deutsch. Morg. Ges.*, xli. 63, is not quite correct) and Niẓām al-Mulk even founded a madrasa specially for him, which like its sister-institution in Baghdād, was called Niẓāmiya. Al-Djuwainī taught there till his death. He died in his birthplace, to which he had gone in the hope of recovering from an illness, on the 23rd Rabī' II 478 = 20th Aug. 1085. His literary activity was so great that Subkī, *Ṭab.*, ii. 77, 20 thinks one could only comprehend his works by a miracle. But in spite of the esteem, which he enjoyed, none of his works ever became very popular. His *Kitāb al-Burhān fī Uṣūl al-Fiḳh* which has not survived, was planned on quite a new scheme and contained so many difficulties that Subkī, *Ṭab.*, iii. 264 is disposed to call it *Laghz al-Umma*. His greatest work *Kitāb al-Waraḳāt fī Uṣūl al-Fiḳh* was commented on down to the xith century A. H., but has not yet been printed.

Bibliography: Ibn Khallikān (Cairo), N°. 351; Subkī, *Ṭabaḳāt*, ii. 70-71; iii. 249—282; Ibn al-Athīr (ed. Tornberg), x. 77 (ann. 485); Ibn Taghrībirdī, p. 771; Wüstenfeld, *Die Akademien der Araber*, N°. 38; the same, *Schāfi'iten*, N°. 365c; Schreiner in *Grätz' Monatsschrift*, xxv. 314 *et seq.*; Brockelmann, *Gesch. d. ar. Lit.*, i. 388. (C. Brockelmann.)

DJUWAINĪ, 'Alā al-Dīn 'Aṭā Malik b. Muḥammad, a Persian governor and historian, author of the *Ta'rīkh-i Djihān-Kushāi*; it is from this work that almost all our knowledge of the author (to 654 = 1256) and his ancestors is derived. The family belonged to the village of Āzādwār in the district of Djuwain [q. v., N°. 2],

in the western part of Khorāsān (it is mentioned as early as the 10th (4th) century and was a day's journey north of the town of Bahmanabād which still exists under this name, cf. Iṣṭakhrī, ed. de Goeje, p. 284); according to Ibn al-Ṭiḳṭaḳā (*al-Fakhrī*, ed. Ahlwardt, p. 209) 'Alā al-Dīn claimed at a later period to be descended from Faḍl b. Rabī', the vizier of Hārūn al-Rashīd. Bahā al-Dīn Muḥammad b. 'Alī had paid homage to the Khwārizmshāh Takash in 588 = 1192; his grandson Bahā al-Dīn Muḥammad b. Muḥammad appears in Dawlatshāh (ed. Browne, p. 135 *et seq.*) as the confidant (*Muḳarrab*) of the Khwārizmshāh Muḥammad b. Takash (died 617 = 1220) in a story said to be taken from the *Ta'rīkh-i Djihān-Kushāi*; but this passage, like several other quotations in Dawlatshāh, does not seem to be found in this work. Its author seems first to mention his father in his account of the last battles between the Mongols and Sulṭān Djalāl al-Dīn Manguberti, (cf. above p. 1004). Bahā al-Dīn was then in Nīshāpūr; the town had been held by two of the Sulṭān's principal officers, Tughān Sunḳūr and Ḳarādja, but they were soon afterwards driven out by the Mongol general Kūl-Bulāt; Bahā al-Dīn went with a few companions to Ṭūs and took refuge in a fortress there, but was afterwards handed over by its commander to the Mongols at their demand. He was kindly received by Kūl-Bulāt, entered the Mongol service and for the next few decades filled the office of *Ṣāḥib-Dīwān* (finance-minister) of Khorāsān under different governors; on several occasions he accompanied Arghūn-Aghā, the last of these governors, to the Mongol capital Ḳarāḳorum. In the second half of the year 651 = 1253, when he had reached the age of 60, he wished to retire, but at the request of the Mongols had to give up the idea and died the same year in Iṣfahān.

'Alā al-Dīn tells us of himself, that, while still a youth, he chose an official career against his father's wish, without having received a proper literary training, and received a position in the Dīwān. On two occasions (647—649 = 1249—1251 and 649—651 = 1251—1253) he made the journey to Mongolia and back with Arghūn-Aghā. When prince Hūlāgū invaded Persia at the head of an army and took over the government of the country, 'Alā al-Dīn was left in Khorāsān in the spring of 654 = 1546 to govern the land with Arghūn-Aghā's son Girāī-Malik. In the same year he earned the gratitude of the people by rebuilding the town of Khabūshān (the modern Ḳučan) which had been destroyed by the Mongols; at his request also Hūlāgū protected the celebrated library of the Assassins from destruction at the taking of Alamūt [q. v., p. 249b *et seq.*]; the books were handed over to 'Alā al-Dīn, who ordered all to be burned that dealt with the heresies of the sect and preserved the others; the majority were afterwards placed in the newly founded observatory in Marāgha.

In 661 = 1262-1263 'Alā al-Dīn was appointed governor (*Malik*) of Baghdād; he probably owed this appointment to the influence of his brother Shams al-Dīn Muḥammad (see below) who had been appointed *Ṣāḥib-Dīwān* in the same year. Henceforth, as Ḥamd Allāh Ḳazwīnī (*Ta'rīkh-i Guzīda*, MS. of the Univ. of St. Petersburg, 153, p. 325) tells us, he governed the land of the Arabs "in place of the Caliph" (*bar djā-i Khalīfa*). He is said to have won great renown in restoring the prosperity of Baghdād and the tranquillity of the province; he expended 100,000 dīnārs of gold in making a canal from the Euphrates to Kūfa and Nadjaf and thereby opened up new areas to commerce (Waṣṣāf, Ind. edition, p. 59). The work was carried out by Tādj al-Dīn 'Alī b. Muḥammad, the father of the author of the *Kitāb al-Fakhrī*; Tādj al-Dīn afterwards sought to get Abāḳā to dismiss the governor and was therefore murdered one night at the latter's instigation; 'Alā al-Dīn thereupon put the assassins to death, but at the same time, confiscated the murdered man's property (*al-Fakhrī*, ed. Ahlwardt, p. 412). A Derwish monastery (*Khānaḳāh*) was built at 'Alī's tomb; the governor on the other hand sought to protect members of other faiths from the fanaticism of Muslims; in 1268 the Nestorian patriarch Denha found a safe asylum in his house. In 1271 an attempt was made by the Assassins to murder the governor, whereupon the Christians were accused by the Muslims of complicity in the plot; in spite of his tolerance 'Alā al-Dīn found himself forced to imprison several bishops, priests and monks.

The hostile attacks to which the two brothers were exposed in the reign of Abāḳā (1265—1282), particularly in the latter years of his rule, had even more serious consequences for 'Alā al-Dīn than for his brother. In 669 = 1270/1271 Abāḳā had the accounts of income and expenditure for the province of Baghdād audited and arrears of 250 tūmāns (a tūmān = 10,000 dīnārs of silver of 6 dirhems each) were found; 'Alā al-Dīn was able to show that this deficit had been caused by the poverty-stricken condition of the people and that the inhabitants would have been utterly ruined, if the payment of the money had been insisted on. Abāḳā was satisfied with this explanation and relieved the province of its arrears of taxation; 'Alā al-Dīn was allowed to return to Baghdād. The same accusations were brought against him in 680 = 1281 with more success; 'Alā al-Dīn was further accused of negotiating with the Egyptian government. He was arrested and, to escape torture, he pledged himself to pay 300 tūmāns to the treasury but, after exhausting all his resources was only able to raise 170 tūmāns; he was set free on the 4th Ramaḍān = 17th December by Abāḳā's orders, but soon afterwards re-arrested for the 130 tūmāns which he still owed, tortured and led naked through Baghdād. When the *Ṣāḥib-Dīwān*, through the favour of the new ruler Aḥmad (1282—1284), was able to destroy his enemies, 'Alā al-Dīn also received his freedom and had his property and his governorship of Baghdād restored to him; but in the same year (681 = 1282/1283) prince Arghūn on his own initiative reopened the enquiry into his administration and confiscated all his property. When 'Alā al-Dīn, who was in Arrān at the time, heard this, he had an apoplectic stroke and died on Saturday the 4th Dhu 'l-Ḥidjdja 681 = 6th March 1283.

'Alā al-Dīn's references to the defects in his literary education are probably to be put down to conventional modesty; he is praised by his contemporaries, among them the author of the *Kitāb al-Fakhrī*, the son of his enemy, as a highly cultured man and a patron of poets and scholars (Zakariyā Ḳazwīnī's *'Adjā'ib al-Makhlūḳāt*, amongst other works, is dedicated to him, cf.

Brockelmann, i. 481 on the first edition of this work in 661 = 1263); his history was regarded as an unrivalled model for its style. The work is divided into three main sections: 1. History of the Mongols and their conquests to the events after the death of Khān Guyūk (cf. the article BATŪ, p. 681[b] *et seq.*), including the history of the descendants of Djūčī and Čaghatāi; 2. History of the dynasty of Khwārizmshāhs, based in part on previous works such as the *Mashārib al-Tadjārib* of Abu 'l-Ḥasan Baihaķī (cf. above p. 591[b] *et seq.* and Yāķūt, *Irshād al-Arīb*, ed. Margoliouth, v. 208 *et seq.*) and the *Djāmiʿ al-ʿUlūm* of Fakhr al-Dīn al-Rāzī (cf. Rieu, *Supplement*, p. 102[b]), and a history of the Mongol governors of Khorāsān to the year 656 = 1258; 3. Continuation of the history of the Mongols to the overthrow of the Assassins, with an account of the sect, based chiefly on works found in Alamūt such as the *Sarguzasht-i Saiyidnā* (cf. above p. 491[a]); other works since lost are also quoted such as the *Taʾrīkh-i Djang-i Dailam* and the *Taʾrīkh-i Sulṭānī* (written for the Būyid Fakhr al-Dawla (died 387 = 997); on this work cf. W. Barthold in the *Orientalische Studien, Th. Nöldeke gewidmet*, i. 174 *et seq.*). Extracts from the *Taʾrīkh-i Djihān-Kushāi* have been published Defrémery (*Journ. Asiat.*, iv[th] Ser., xx. 372 *et seq.*); Schefer (*Chrestomathie Persane*, ii. 106 *et seq.*); Houtsma (*Recueil de textes relatifs à l'histoire des Seldjoucides*, i. p. xxii. *et seq.*); Salemann (in W. Radloff's *Kudatku Bilik*, Introduction, p. xli. *et seq.*) and Barthold (*Turkestan* etc., i. 103 *et seq.*); cf. the translation of passages in d'Ohsson, *Histoire des Mongols*, i. 429 *et seq.*: 441 *et seq.*; Elliot, *History of India*, ii. 386 *et seq.* and Ross, *Taʾrīkh-i Rashīdī*, p. 288 *et seq.* The accounts of the author were first collected by Quatremère (*Fundgruben des Orients*, i. 220 *et seq.*; *Histoire des Mongols de la Perse par Rashīd al-Dīn*, p. 160 *et seq.*), and afterwards by d'Ohsson, (*Histoire des Mongols*, i. p. xvii. *et seq.*; iii. 470, 511 *et seq.*, 536 *et seq.*, 582); Elliot, (*History of India*, ii. 384 *et seq.*) and Schefer (*Chrestomathie Persane*, ii. Notes, p. 134 *et seq.*) only reproduce Quatremère's and d'Ohsson's views and the facts given by them; a few corrections to d'Ohsson are to be found in Hammer-Purgstall's *Geschichte der Ilchane* (see Index). A complete edition of the *Taʾrīkh-i Djihān-Kushāi*, of which the first volume has already appeared (1912), is being prepared by Mīrzā Muḥammad Ķazwīnī for the *Gibb Memorial Series*; the fact that no such edition has hitherto been undertaken is described by Browne in his *Literary History of Persia*, ii. 473) as "nothing less than a scandal". The work, which has considerably influenced historical tradition in the east, is for us also an historical authority of the first rank. The author is probably the only Persian historian who had travelled to Mongolia and described the countries of Eastern Asia from his own experiences; it is to the *Taʾrīkh-i Djihān-Kushāi* and to the *Journal* of William of Rubruck that we owe practically all we know of the buildings in the Mongol capital Ķarāķorum. The accounts of Čingiz-Khān's conquests are given nowhere else in such detail; many episodes, such as the battles on the Sir-Daryā above and below Otrār and the celebrated siege of Khodjand are known to us only from the *Taʾrīkh-i Djihān-Kushāi*. Unfortunately Djuwainī does not give us in these cases the first hand impressions of a contemporary, but the opinions of the next generation, so that the details of his narrative, particularly the statements of the numbers of combatants and slain have to be taken with great caution; cf. for example, the fact pointed out long ago by d'Ohsson (i. 252 *et seq.*), that the citadel of Bukhārā according to Djuwainī was defended by 30,000 men all of whom were slain on its capture, while Ibn al-Athīr (ed. Tornberg, xii. 239) on the authority of an eye-witness, says the garrison consisted only of 400 cavalry. The account of the events in Mā warāʾ al-Nahr before the Mongol conquest, particularly of the battles between the Ķarā-Khitāi and the Khwārizmshāh Muḥammad, is given in different chapters, the result of which is, that the author gives quite another account in the later chapters from the earlier, apparently from other (written or oral) sources. It was only by later compilers like Mīrkhond that these contradictory accounts were woven into an uniform narrative, not of course, according to the criteria of modern criticism; European scholars, to whom such compilations were much more accessible than the original authorities, have been frequently led astray by them.

Djuwainī wrote his history while still a young man and does not seem to have again returned to this field of research in later life. According to his own statements he was asked, when in Mongolia, as early as 650 = 1252-1253 to write a history of the Mongol conquests; in the preface to the work we are told that the author was 27 years old at the time of its composition; in the account of the siege of Bukhārā and Samarķand the year 658 = 1260 is given as the date of composition of this chapter (cf. the text in Schefer, *Chrest. Pers.*, ii. 118 at the foot), in the (late) manuscript B. M. Or., 155 (cf. Rieu, *Catalogue* etc., p. 161) the month Rabīʿ I. (15[th] February—15[th] March) as the date of the conclusion of the whole work. In spite of Quatremère's views, it cannot be proved that the preface was written much before this date. Quatremère relies on the fact that Khān Möngke, who, according to Rashīd al-Dīn (cf. Blochet's edition, p. 333), died in 655 = 1257, is mentioned in the preface as still reigning; but the date given by Rashīd al-Dīn is certainly wrong; according to the Chinese authorities Möngke Khān did not die till August or September 1259 (in the 7[th] month, cf. C. Arendt in the *Mitt. des Orient. Seminars zu Berlin, Ostas. Stud.*, iv. 155); the author of the *Ṭabaķāt-i Nāṣirī* (transl. Raverty, p. 1292), which was also written in 658 = 1260, only knew of his death through a vague rumour. Quatremère is no more correct in his thesis, that the author could not have concluded his work with the account of the extinction of the Assassins, although, as Quatremère says, Maḥmūd Nikbī b. Masʿūd bases his account of the fall of Baghdād on the *Taʾrīkh-i Djihān-Kushāi*; a similar account is actually to be found in one of the St. Petersburg manuscripts (Imper. Library, iv. 2, 34) of Djuwainī's work, but the chapter containing it is expressly stated to be a "continuation of the book" (*dhail-i kitāb*). Quatremère's statement that so late a year as 663 = 1264-1265 is mentioned in the account of Sulṭān Djalāl al-Dīn (an adventurer is said to have declared himself the lost Sulṭān in this year), seems to be based on a wrong reading in a manuscript,

the St. Petersburg manuscripts give the date as 633 = 1253-1254.

During the persecution he suffered under Abāḳā, Djuwainī wrote in Arabic an epistle of consolation to his brothers (*Tasliyat al-Ikhwān*, as it is correctly given in Quatremère, *Fundgruben*, i. 234 and Hammer-Purgstall, *Geschichte der Ilchane*, i. 307; cf. Waṣṣāf, Ind. lith., p. 101, and Mirkhond, Pers. lith., Vol. v. without pagination; in d'Ohsson, iii. 583, the title is erroneously given with a reference to Mirkhond as *Tathlīth al-Ikhwān*, "la trinité des frères"; the same mistake occurs in Schefer, *Pers. Christ.*, ii. Notes, p. 10). A *Ḳaṣīda* from this work is said by Waṣṣāf (l. c.) to have been imitated by seventy poets who added verses with the same rhyme (*tawshīḥ*). (W. BARTHOLD.)

DJUWAINĪ, SHAMS AL-DĪN MUḤAMMAD B. MUḤAMMAD, brother of the preceding, a Persian statesman; as *Ṣāḥib-Dīwān*, he was at the head of the administration of Persia under Mongol rule in the reigns of Hūlāgū (to 1265), Abāḳā (1265—1282) and Aḥmad (1282—1284); according to Rashīd al-Dīn (ed. Quatremère, p. 392 *et seq.*, 402), he was appointed to the office in 661 = 1262-1263. It is not known whether he was older or younger than his brother; nor do we know anything of his career before the year 661; he is not mentioned by his brother. In 677 = 1278 he was sent to Asia Minor to arrange the affairs of that province; an account of his work there is given by his contemporary Ibn Bībī (in Houtsma, *Recueil de Textes relatifs à l'Histoire des Seldjoucides*, iv. 329 *et seq.*), amongst others. The last years of Abāḳā's reign were as troubled for Shams al-Dīn as for his brother; it is true that he was not, like 'Alā al-Dīn, deprived of his freedom and property and that he was even able to retain his office; but his enemy Madjd al-Mulk Yazdī was appointed controller of the kingdom (*Mushrif al-Mamālik*) and thus became second minister along with Shams al-Dīn; documents drawn up in the Dīwān bore on the right side the seal of the *Ṣāḥib-Dīwān* and on the left that of the *Mushrif* (Waṣṣāf, Ind. ed., p. 95); on ceremonious occasions at court, the Mushrif was openly favoured by the ruler, while insults and mortifications were heaped on the *Ṣāḥib-Dīwān*. After the death of Abāḳā the situation took another turn: Aḥmad, who had adopted Islām, was completely under the influence of Shams al-Dīn; the *Ṣāḥib-Dīwān* and his brother were exonerated from all the accusations levelled against them and received the most lavish compensation; Madjd al-Dīn on the other hand was accused of high treason for his relations with Arghūn, handed over to his enemies, and put to death by them (20th Djumādā I. 681 = 26th August 1282, according to Ḥamd Allāh Ḳazwīnī, *Ta'rīkh-i Guzīda*, MS. in the Univ. of St. Petersburg, N°. 153, p. 324; the date given by d'Ohsson, *Histoire des Mongols*, iii. 559 following Rashīd al-Dīn, does not correspond to the week-day). After the struggle between Aḥmad and Arghūn had ended in favour of the latter, Shams al-Dīn could expect no good from the new ruler; after some hesitation he had to make up his mind to pay homage to the victor, was at first treated kindly, but soon afterwards a charge was brought against him and he was executed on the 4th Sha'bān 683 = 16th October 1284 near the town of Ahar (on the road from Ḳazwīn to Zandjān). His sons met the same fate; their tombs were near Tabrīz, where Waṣṣāf visited them in 692 = 1293 (*Ta'rīkh-i Waṣṣāf*, Ind. ed., p. 142).

Like 'Alā al-Dīn, Shams al-Dīn was considered a patron of art and learning, and even wrote Arabic verse, which however savoured of barbarism (*'adjamīyat*) to the critics of Baghdād (Waṣṣāf, p. 58 at the foot). According to Dawlat-Shāh (p. 105) the work *Shamsīya* was dedicated to him, and he himself wrote a commentary (*Sharḥ*) on it. The aphoristic poems of Sa'dī known as *Ṣāḥibīya* are addressed to Shams al-Dīn; the third of Sa'dī's prose works (*Risāla*) consists of questions by the *Ṣāḥib-Dīwān* and the poet's replies (Ethé in the *Grundriss d. Iran. Phil.*, ii. 294). Shams al-Dīn himself, as Waṣṣāf (p. 142) expressly says, was never in Shīrāz, but his death was lamented even there. He is particularly celebrated for the prosperity he brought the kingdom and for his protection of Islām from oppression by the heathen rulers. Ḥamd Allāh Ḳazwīnī (*Ta'rīkh-i Guzīda*, MS. in the Univ. of St. Petersburg, 153, p. 323), the cousin of his enemy Fakhr al-Dīn pays him the doubtful compliment of having obtained for himself by his good government (*ḥukm-i tadbīr*) vast estates and considerable wealth; his daily income from his estates is said to have been 1 tūmān (according to Rashīd al-Dīn, in d'Ohsson, iv. 8: 1000 dīnār i. e. $1/_{10}$ tūmān, but even this would be an incredible sum for those days). Waṣṣāf, (p. 56) also tells us that when in the reign of Gaikhātū in the year 693 = 1294, the revenue of the estates (*indjū*) of the Ṣāḥib-Dīwān (*amlāk-i ṣāḥibī*), which had been incorporated in those of the ruling house, was estimated, it was found to be 360 tūmāns a year. Cf. d'Ohsson, *Histoire des Mongols*, iii. 396, 500 *et seq.*, 554 *et seq.*; iv. 4 *et seq.*; Hammer-Purgstall, *Geschichte der Ilchane*, see Index. (W. BARTHOLD.)

DJUZ', plural AJZĀ' (A.), "a part"; in prosody "foot" in a line. *Djuz'* is also the name of the 30 divisions into which the Ḳor'ān is divided for purposes of recitation.

DJŪZDJĀN, Persian GŪZGĀN, the older name of a district in Afghān Turkestan between Murghāb and the Āmū-Daryā. Its boundaries were not well defined, particularly in the west but it certainly included the country containing the modern towns of Maimana, Andkhūī, Shibergān and Sar-i Pul. Lying on the boundary between the outskirts of the Iranian highlands and the steppes of the north, Djūzdjān probably always supported nomad tribes as it does at the present day in addition to the permanent settlements in its fertile valleys (cf. Ibn Ḥawḳal, p. 322,₉ *et seq.*; Ḥādjdjī Khalīfa, *Djihān-Numā*, ed. 1145 A. H., p. 316). The principal wealth of the land lay in its flocks (camels: Ibn Ḥawḳal, *loc. cit.*; Vámbéry, *op. cit.*, p. 213 — horses: Marquart, *Ērānšahr*, p. 138, p. 147, note 22; Vámbéry, *op. cit.*, p. 222 — sheep: Vámbéry, p. 213; Yate, *op. cit.*, p. 344; cf. Iṣṭakhrī, p. 271,₅; Ibn Ḥawḳal, p. 322,₂₀). Although the way from the highlands of Iran to Mā warā' al-Nahr lay through Djūzdjān, it was used not so much for friendly intercourse, as as a military road for armies passing through it. While the vicinity of the steppes with their nomad hordes constantly threatened any peaceful development on a small scale, the general history of the country was destined by the greater powers in the southwest and the northeast to be that of a buffer state on the ancient frontier between different races.

The district, which in the beginning of the 1st = vii^{th} century, was attached to Ṭukhāristān (see Marquart, *op. cit.*, p. 67), was conquered on the occasion of al-Aḥnaf b. Ḳais' campaign in 33 A. H. by his lieutenant al-Aḳraʿ. The marches suffered not only from the wars with the Turks but from domestic differences within Islām also. In the year 119 = 737 the Khāḳān was defeated by Asad b. ʿAbdallāh al-Ḳasrī near the capital of Djūzdjān (Shubūrḳān). In 125 = 743 the ʿAlid Yaḥyā b. Zaid whose tomb was revered long afterwards (cf. Wellhausen, *Arab. Reich*, p. 321) fell in battle here against the Umaiyads. During the ʿAbbāsid period the governor's residence was in Anbār (probably the Djūzdjānān of Nāṣir-i Khusraw, p. 2, possibly the modern Sar-i Pul); the native ruling house of *Gūzgān-Khudhā*, the Afrīghūn dynasty continued however to survive and had its capital in Kundurm (cf. Iṣṭakhrī, p. 270; Ibn Ḥawḳal, p. 321 *et seq.*; Yaʿḳūbī, p. 287). Shubūrḳān (Shibergān) occasionally appears as the political centre of Djūzdjān, while Muḳaddasī (p. 297) and Yāḳūt, ii. 149 *et seq.*, mention al-Yahūdiya = Maimana [q. v.] as the capital. The ancient name Djūzdjān appears gradually to have fallen into disuse, to survive in literature only for some time longer. The various towns in it continue to be mentioned again and again as the scenes of hostile attacks; we can only mention Čingiz-Khān's and Tīmūr's invasions here. Nothing shows the importance of the district more clearly than the fact that a number of towns have survived all these vicissitudes to the present day.

In modern times quite a number of petty Uzbeg Khānates (Akče, Andkhūi, Shibergān, Sar-i Pul, Maimana) have been established in the ancient Djūzdjān, but they were much harassed by raids of their more powerful neighbours such as the invasions of the Turkoman nomads. Since the time of Dōst Muḥammad [q. v.] these Khānates have gradually been incorporated in the Afghān province of Turkestan; Maimana alone retains a vestige of independence under Afghān suzerainty.

(R. Hartmann.)

DJUZDJĀNĪ, Minhādj (al-Dīn) ʿAbū ʿOmar ʿOthmān b. Sirādj (al-Dīn) Muḥammad, a Persian historian. His father, who filled the office of Ḳāḍī in Bāmiyān and Ṭukhāristān, was slain, while going to the Caliph of Baghdād as ambassador of the Ghūrids, by robbers who fell upon him on the way. He himself escaped to India (Dihlī) when the Mongols came to Ghūr in 624 (1227). He spent the years 640—643 = 1242—1245 in Lakhnawatī, then returned to Dihlī and received the office of Ḳāḍī of Gwalior and of superintendent of the Nāṣiriya-Madrasa in Dihlī. He was chief Ḳāḍī from 649—651 = 1251—1253 in the reign of Nāṣir al-Dīn Maḥmūdshāh, who had been on the throne since 644 = 1246, was then disgraced but restored to his former position in 653 = 1255. Nothing definite is known of his later days except that it may be deduced from his history, which he called *Ṭabaḳāt-i Nāṣirī* (printed in the *Bibliotheca Indica*, in 1864, transl. by Raverty, ibid. 1873—1876) in honour of Sulṭān Nāṣir al-Dīn, that he was still alive in 658 (1260).

DOʿĀN, the name of a wādī in Ḥaḍramawt, some fifty miles in length, running in a N. W. direction between the 48th and 49th degrees of east longitude. This valley was visited in 1846 by Von Wrede in an unsuccessful attempt to reach the Wādī Ḥaḍramawt. Theodore Bent and Mrs. Bent had intended to go by this route in 1893—1894, but were prevented by their Arab guides, who represented that the people of the town of Khuraiba, situated near the head of the valley, intended to attack them. Bent suggests that this is the town of Doʿān of Hamdānī, the Θοάνα of Ptolemy, and Thoani of Pliny. Bent merely passed the mouth of the W. Doʿān, where it joins the W. al-ʿAin, about three English miles below Khaila. He says it has two branches, only the larger of which bears the name Doʿān. The town of Doʿān was a great emporium in the days when the frankincense trade flourished. Earlier in the same year Leo Hirsch had struck the Wādī Doʿān at the point reached by Von Wrede and continued to Shibam. Hamdānī mentions two places, one called Daʿān in the Iyād country, and one Doʿān or Daʿān in the Ḥidjāz.

Halbinsel* (ed. Müller), p. 178, 25 and 181, 18; Ptol. *Geogr. Lib.* viii. (ed. Wilberg), p. 411.

(T. H. Weir.)

DOBRUDJA (from Δόβηρες, in Herodotus V, 16 a Paeonian people, or from Dobrotič, the name of a Bulghār ruler of the xiv^{th} century, or from the Bulgarian *dobrīče* "stony, unfertile plain"), a district in Roumania, a peninsula bounded by the lower Danube and the Black Sea (from the coast of Balčiḳ to the delta of the river); it is a broad, arid plateau from 200—300 feet high, of grey sand, covered with swamps, without drinking water, but rich in pasture for cattle; it has numerous lakes of which Ḳaraṣū in the centre and the lake of Ramzin are the most important. The only elevation is the small range (1800 feet high) of Besh-Tepe ("the Five Hills"). The district is traversed by the Küstendje (Constanța)—Černavoda railway, which follows the triple line of fortifications known as Trajan's Wall, which was built in the reign of Valens in 377 by Trajan, a military officer (Amm. Marc., xxxi. 8). The Deli-Orman ("mad forest") separates Dobrudja from the Bulgarian province of Varna. The few towns in the district are Medjīdiye, founded in 1855, in the centre on the railway; Rasova, Černavoda, Hirsova, the fortresses of Mačin, Isaḳčī and Tulča, all on the Danube; Bābā-Dāgh, on the northern lagoon and Küstendje on the coast. The plateau is inhabited by a few Noghai Tatars who were transferred hither from Bučaḳ [q. v., p. 769ᵃ] in South Russia 1784 and 1812, and from the Crimea in 1855, and by Circassians who immigrated in 1864. In the northern part of Dobrudja there are a number of Lippowans, Russians, Ruthenians and a few "Old Believers", whose

ancestors were driven out of Russia by Catherine II. On the southern arm of the Danube delta there are a few villages of German and Alsatian colonists. The population on the coast is Bulghār to the north of Küstendje, Turkish in the south, and there are a few Arabs in ʿArabköi (immigrated in 1832). The whole population is about 115,000—116,000.

The name Dobrūdja is first found in Laonikos Chalkokondylas in the second half of the xv[th] century. By 788 (1386) the district was under Turkish rule, however, for at that time Serādj, a Tatar ruler, acknowledged himself the vassal of Sulṭān Murād I., with the consent of Constantine, the lord of Küstendil (v. Hammer, *Gesch. d. Osm. Reiches*, i. 206). At the outbreak of the last Russo-Turkish war, Dobrūdja belonged to the Sandjaḳ of Tulča in the Wilāyet of the Danube, and comprised the Ḳaẓās of Kilia, Sülina, Maḥmūdiye, Isakči, Mačin, Bābā-Dāgh, Hirsova, Küstendje and Madjidiye. By the Treaty of Berlin in 1878 (Art. 46) the district was transferred to Roumania, which had to give up Bessarabia to Russia in compensation. At the same time Dobrūdja was extended in the south by the inclusion of an area stretching eastwards from Silistria to the south of Mangalia on the Black Sea. Since then, it has been divided into two administrative districts, Tulcea in the north and Constanta in the south.

DOFĀR. [See ẒAFĀR.]

DOLMA BAGHČE. [See CONSTANTINOPLE.]

DŌMBKĪ, the name of a Balōč tribe now located in the plain of Kaččhī, with its head quarters at the small town of Lēhrī. This tribe is considered to be of the purest Rind blood, though not now of the greatest importance. It was at one time celebrated for raiding in Sindh, but became more peaceful after punishment by Gen. Jacob. The tribe, in 1901, numbered 4938. The name Dōmbkī is by legend connected with the Dōm or minstrel tribe, but more probably is really derived from Dōmbak in Persian Balōčistān. (M. Longworth Dames.)

DONGOLA (Dunḳula, Dunḳula) a district in Nubia, which lies along both banks of the Nile between 19° 42' and 18° N. Lat. for a distance of about 170 miles; at the present day it is a *Mudīriya* of the Anglo-Egyptian Sūdān. The population, (*Danāḳila*, *Danāgla*, sing. *Dongolāwī*) numbers about 56,000; it has in course of time received a considerable infusion of Arab blood and speaks a dialect of Nubian. The capital is New Dongola or al-Urdu with about 15,000 inhabitants.

The district takes its name from the ancient capital of the Christian kingdom of Maḳurra (on the latter cf. Marquart, *Benin*, p. ccl. *et seq.*), which at the time of the Muslim conquest, covered roughly the same area as the modern Dongola. In the Arabic sources the name is first mentioned in connection with the campaign, which ʿAbdallāh b. Abī Sarḥ undertook against Nubia in 31 (652), in the course of which the town was besieged and its church destroyed. The celebrated treaty was then signed by which the kingdom was pledged to make certain presents or tribute (cf. the article BAḲṬ, p. 608[b] *et seq.*), though on the other hand the Egyptian authorities had to give presents in return. Even as early as this a mosque is mentioned in Dongola which the Nubians had to promise to protect and support. The land, however, remained a stronghold of Christianity for centuries longer; in the second century A. H., the king (Kyriakos) even invaded Egypt, to effect the release of a Coptic patriarch, who had been imprisoned by an Umaiyad governor, and was successful in his object. When Djawhar [q. v., p. 1028] had conquered Egypt in 358 = 969 for the Fāṭimids, he sent an embassy to the Nubian king reigning at that time, George, demanding that he should adopt Islām, but without success. According to Abū Ṣāliḥ, King Raphael built a lofty palace with several domes of red brick, similar to the buildings of the ʿIrāḳ, in Dongola in 392 = 1002. At the beginning of the Aiyūbid period we learn from a description sent to Shams al-Dawla Tūrān Shāh in connection with his Nubian expedition, that at that time the only cereal grown in Dongola was *durra*; the fruit of small palm-trees was also an important article of diet for the population. As to the town itself, it consisted, with the exception of the royal palace, of rude huts only. About a century later, in the reign of Baibars, the independence of the kingdom was finally destroyed. In 671 = 1272-1273, King David's refusal to pay *baḳṭ* and his raids into Upper Egypt provoked a punitive expedition, which reached the capital; in 674 = 1275 Dongola was taken and Shekenda, David's nephew, who had taken refuge from him in Egypt, raised to the throne in his stead. The kingdom thus became practically a dependency of the Mamlūks. During the next few troubled decades the Egyptians seem repeatedly to have deposed the reigning prince in favour of one agreeable to them, who, however, as soon as the troops supporting him were withdrawn, was deposed. This happened on the campaigns against Shamāmūn in 686 and 688 (1287 and 1289); and again in 716 = 1316, when a Muslim ascended the throne for the first time in the person of a member of the royal house who had become a convert to that faith. The usurper Kanz al-Dawla (in Ibn Baṭṭūṭa: *Kanz al-Dīn*) — a member of the Banū ʾl-Kanz tribe settled around Assouan —, who soon afterwards seized the throne, was also a Muslim, but the population remained Christian. Under this ruler the kingdom again became independent in 1325 A. D., but, in 767 = 1365-1366, Egypt once more interfered in Nubian affairs, on account of the constant unrest fostered by the Banū Djaʿd, Banū ʾl-Kanz and Akramī, and caused the king to take up his residence in the fortress of Daw, as the capital Dongola had been abandoned by its inhabitants. The history of the centuries following is by no means clear. The land became more and more a prey to the ravages of Arab tribes and during this period its gradual conversion to Islām was accomplished. That the Djuhaina [q. v. p. 1060] played a considerable part in this may be concluded from Ibn Khaldūn, v. 429. According to Barth (*Reisen*, iii. 384), the Tundjer, who in the xvi[th] century founded the kingdoms of Dārfūr [q. v. p. 915[b] *et seq.*] and of Wadāi

[q. v.], claim to have come from Dongola. Burckhardt was told that the power had long been in the hands of the Zubēr and Funnye families. The latter are probably the Fuuj, who founded the kingdom of Sennār some time after 1500 A. D. and extended their conquests as far as Dongola. At the beginning of the xixth century the Shāyiḳiya Arabs became supreme in the country; besides them there were probably also 'Abābda [q. v., p. 1b *et seq.*] and Kabābish. The influence of the tribe became considerably diminished when the Mamlūks, who had escaped the massacres of 1811 and 1812, found a firm footing in Dongola, soon won the sympathies of the people, endeavoured to protect them from being plundered by the Arabs and successfully endeavoured to promote agriculture; they also drove the Shāyiḳiya out of their stronghold Maraka (the modern New Dongola) on the left bank of the Nile 80 miles north of Old Dongola, which they then made their headquarters. But when in 1820 the conquest of the Sūdān by Ismā'īl Pāshā began, they fled to Shendi, while the Shāyiḳiya offered strenuous though vain resistance at two points before they finally submitted to the Egyptian troops. Dongola now became one of the five mudīriyas, into which the conquered country was divided; but native chiefs were not, however, deprived of their positions. In 1885 the province, like all the others, became affected by the rising of the Mahdī, himself a native of Dongola. After the governor Muḥammad Pāshā Yawr had twice defeated the invaders, in the battles of Debbe and Korti, it was decided in June 1885 to vacate the province, which then fell into the possession of the dervishes. It was not reconquered till 1896, when Lord Kitchener's troops entered Dongola on the 20th September, after twice defeating the dervishes. In terms of the agreement of 19th January 1899 the country became a mudīriya of the Anglo-Egyptian Sūdān.

DÖNME, a sect of Jewish Muḥammadans in Salonica. In October 1676 the false Messiah Sabbatai Zebi died; he became worshipped and addressed in prayer as a saviour by the majority of Jews in the east even after their adoption of Islām. His widow thereupon declared that her brother Jacob was her son whom she had borne to the resurrected Sabbatai Zebi as a ten year old boy. The infatuation for mysticism and cabbalistic heresies, which were at that time very popular, enabled her to find many adherents in her native town of Salonica, who recognised in her alleged son an incarnation of the Messiah and paid him divine honours. They called him Jacob Zebi (*Querido* = favourite). The Lurian-Cabbalistic idea that, when a husband no longer takes pleasure in his wife, he should divorce her and take another in order to fulfil the commandment that married life should be happy, was strictly practised by the followers of Sabbatai Zebi and Jacob Querido and resulted in countless marriages and divorces. The Turkish authorities, whose attention had been called to this state of affairs by numerous complaints, made investigations and instituted severe penalties. Their wrath was particularly directed against Querido, the head of the sect, but, in order to escape punishment, he at once adopted Islām. Many of his followers also assumed the turban and performed a common pilgrimage to Mecca. On the return journey Querido died and his son Berechja was thereupon worshipped as the Messiah and a divine incarnation. — They called themselves "*Mäminim*" (*al-Mu'minūn*), the Jews gave them the name „*Minim*" מינים and the Turks *Dönme*, "seceders". — They are divided into three minor sects, who are called: 1.) *Smirli* from Smyrna, the birthplace of Sabbatai Zebi. They are also called *Karamaya* or *Cavalieros*, because the aristocracy among them belong to this sect. 2.) *Yakubites* from Jacob Querido 3.) *Kunios*, founded by Jacob Kunio ('Othmān Bawwāb) an attendant in the temple, at the end of the xviiith century. They intermarry, attend the mosque as well as their own synagogues and observe many Jewish as well as the Muḥammadan fasts and festivals. At the present day there are still about a thousand families in Salonica numbering some 10,000 souls in all of this sect. Their preacher is called *Ab-Beth-Din* and their leader at prayers *Paytan*. The former gives the children instruction in the Bible and Sohar according to the system of Sabbatai Zebi, administers justice, performs marriages and grants divorces and in his sermons admonishes his hearers to charity and kindness to the poor. Circumcision, originally performed on the eighth day, is now also performed in the third or fourth year, under Turkish influence. Their marriages are performed on Mondays or Thursdays; their ritual seems to be a mixture of Jewish and Muhammadan rites and customs. They believe that Sabbatai Zebi and Jacob Querido will one day return and save them. As a result of intermarriage, they are gradually being broken up and in the course of a few generations will be quite merged in their Turkish neighbours.

DÖNÜM (from the Turkish *dön-* to turn round) a Turkish measure of area, originally named from the peasant's habit of turning the plough and its team round when he reached the end of a furrow. The *dönüm* is a square whose side is 40 ordinary paces long with an area of about 1000 square yards. In the law concerning property

in land in Turkey (Art. 131) the *dönüm* is more accurately defined. There is also a *dönüm ʿashrī* (decimal dönüm) which is a square with a side 100 paces long.

DŌST MUḤAMMAD, the founder of the Bārakzai rule in Afghānistān, was a son of Pāinda Khān who was made chief of the clan under Tīmūr Shāh the Durrānī King, and afterwards had the Ghalzais also put under him. He obtained great influence which continued under Zamān Shāh until a rival, Wafādār Khān, obtained the Shāh's confidence, and Pāinda Khān was executed on a charge of conspiracy. He left twenty one sons of whom Fatḥ Khān was the eldest. Dōst Muḥammad was the 20th and his mother was of Persian origin. He was not therefore of pure Afghān blood. After his father's death Dōst Muḥammad lived as a child with his mother's relatives until his elder brother Fatḥ Khān, who had risen to importance as the principal supporter of Maḥmūd Shāh against Zamān Shāh, took charge of him in his twelfth year, 1215 (1800). Dōst Muḥammad remained attached to Fatḥ Khān in his varying fortunes, and when Maḥmūd Shāh's second reign began in 1224 (1809), he obtained high positions, and his great abilities were generally recognized. He was one of the principal agents in the defeat of Shāh Shudjāʿ by Maḥmūd, and showed absolute unscrupulousness in getting rid of all rivals. Dōst Muḥammad commanded successful expeditions against rebellions in Kashmīr and Herāt 1232 (1816). After Herāt was taken it is said that Dōst Muḥammad grossly insulted the wife of one of the princes who was herself the sister of Kāmrān son of Maḥmūd Shāh. Dōst Muḥammad fled to Kashmīr, and Kāmrān in revenge seized and blinded Fatḥ Khān who was afterwards killed in the presence of Maḥmūd Shāh. This murder caused a revulsion of feeling against Maḥmūd Shāh, and Dōst Muḥammad was able to raise a large force and defeated Maḥmūd and Kāmrān, 1235 (1818). Kābul came into his possession, while Maḥmūd, and after his death Kāmrān, retained Herāt.

The power over central Afghānistān including the cities of Kābul and Ḳandahār and the great Durrānī and Ghalzai tribes remained in Dōst Muḥammad's hands. He never claimed to be Shāh in succession to the Sadōzai kings, but was content with the title of amīr. His early coins commemorated his father Pāinda Khān in the couplet

Sīm u ṭilā ba shams u ḳamar mīdihad navīd
Waḳt-i rivādj-i Sikka-i Pāinda Khān rasīd.

"Silver and gold give the news to the sun and moon that the time has come for the circulation of Painda Khān's coinage".

The principal events in his reign including the invasions of Shāh Shudjāʿ al-Mulk, the war with the English, his flight to Bukhārā, imprisonment in Calcutta and final reinstatement at Kābul in 1258 (1842) are related in Art. AFGHĀNISTĀN pp. 170, 171. After his restoration he confirmed himself in his government, but had trouble with his eldest son Akbar Khān, who had been a principal leader in the wars against the English. Akbar Khān died in 1266 (1849). The same year during the second Sikh war of 1848—1849 an Afghān force entered the Pandjāb to assist the Sikhs, but met with no success and returned in disorder after the battle of Gudjrāt. After this Dōst Muḥammad saw the wisdom of confining his efforts to the consolidation of his own rule, and recovered the provinces beyond the Hindū Kush mountains which had been lost after the fall of the Durrānī kingdom. Just before his death he succeeded in taking Herāt which had been held by Persia ever since the murder of Kāmrān in 1258 (1842). This event took place in 1280 (1863) and he died while in his camp there the same year. He left the succession to his fifth son Shēr ʿAlī to the exclusion of his elder sons, M. Aʿẓam and M. Afḍal, which led to much subsequent trouble.

Dōst Muḥammad owed his rise to the incompetence of the later Durrānī kings Zamān Shāh, Maḥmūd Shāh and Shudjāʿ al-mulk as much as to his own undoubted abilities and lack of scruple as to the means of attaining his ends. He never hesitated at any murder or treachery, but yet was a good ruler according to the standard of his country and was considered a just man. Minor faults, such as an excessive fondness for drinking, did not stand in his way, and his name is still a great one among Afghāns of all classes. He left behind him a much stronger though a less extensive kingdom than that of his predecessors. The possession of Peshāwar, the Dēradjāt and Multān, Kashmīr and N. Sindh was really a weakness and not a strength to the administration, and their loss enabled the internal Government to be strengthened, with the result that his kingdom in despite of civil and foreign wars remains practically intact to the present day.

DOVIN. [See DWIN.]

DRA, the DARʿA of Arab authors, a river in Morocco, flowing into the Atlantic Ocean 40 miles southwest of Cape Nūn. The Dra is the longest river in Morocco. Its course which is not very accurately known, is perhaps over 800 miles long.

The Dra is formed by the confluence of two streams from the central High Atlas, the Wād Idermi from the west and the Wād Dades from the east. The former is in turn formed by the union of the Wād Tideli or Imini which drains the Djebel Tideli and the Wād Werzazat (see the article ATLAS, p. 509b *et seq.*) which drains the Djebel Sirwa. The second rises in the country of the Ait Merghād. The two streams whose union forms the Dra flow in opposite directions through the long hollow between the High and the Anti-Atlas. Their comparatively narrow valleys are bordered by meadows and cultivated land; but, in consequence of the high level of their upper courses, olives are rare and palms are practically not to be found in them. The population is almost exclusively Berber: Berāber, Ait Sedrat, Imerran in the Wād Dades; Ikhzama, Ait Marlif, Zenaga, Ait Amer in the Wād Idirmi. These tribes among whom are a few communities of Jews, are beyond the authority of the Sulṭan.

The Wēd Dra breaks through the Anti-Atlas in the Kheneg (ravine) of Tarea; it then turns to the southeast, traverses the Djebel Bani in a second ravine and thus reaches the desert. Its valley shut in by high mountains, gradually begins to widen, though the arable land which it waters does not exceed a mile and a half in breadth; sometimes it is limited to one bank only. The various districts watered by the river, Mezgita, Tinzulin, Ternata, Fezwata, Ḳtawa, which form the Dra country, are among the richest in Morocco. For a stretch of 100—110 miles, villages follow one another in practically uninterrupted line in the midst of palm-groves and orchards. The most important are Tamegrut on the left bank, which contains one of the most sacred Zāwiyas in Morocco, that of Sīdī Muḥammad b. Nāṣir, the founder of the Nāṣiriya order, and Beni Sbīḥ. This district has been prosperous from quite ancient times; even in the xi[th] century al-Bakrī draws a picture of it which quite corresponds to the accounts given by the few modern travellers (Rohlfs, de Foucauld) who have visited it: "The banks of this river" writes the Arab geographer "are covered with luxurious woods and orchards. Every day of the week a market is held on the banks of the Dra at one or other or sometimes even at two of the places which have markets; so vast is the area of the district and so large the number of its inhabitants. The land under agriculture in this country is seven days' journey across". The population is mainly Berber: according to de Foucauld, 95% of the inhabitants speak Tamazirt. Among them we find Berāber, Aït Sedrat, Ulād Yaḥyā, Roha, Aït Atta, and so many Ḥarrāṭīn that the word Drāwī has become a synonym for Ḥarṭānī [cf. the article BERBERS]. Except in Mezgita these Ḥarrāṭīn have lost their independence and have to pay tribute.

The lower course of the Dra is quite different in every respect from the central course. Beyond Mamid al-Ghozlan, the river enters the desert region through which it flows till it reaches the sea. Its banks are uninhabited; the settled population is replaced by nomads (Tajakant, Arib, Ida u Belal, Aït u Mribet), who live some distance from the river. The latter describes a wide curve to the west and continues in this direction to its mouth; it gradually loses in volume on its course through the desert. Apart from a few days when it is flooded, it is as dry as the Wēds of the Sahara. But the presence of subterranean water enables some parts of its valley to be cultivated, for example, the sandy plain called Delaya, two days' journey long and one and a half broad which is covered with water when the river is flooded, and the arable stretches called "*mader*" in the bed of the Dra itself at the mouths of the ravines that open into it. These, six in number, which are separated from one another by barren stretches, grow corn, more especially maize.

DRAGUT. [See TORGHUT.]

DRĪSHAK, the name of a Balōč tribe which has its headquarters at Āsnī near Rādjanpur in the Dēra Ghāzī Khān District of the Pandjāb. The tribe is of Rind origin, but in the present day is mixed with the Djaṭ cultivators. The Balōč language is giving place to Lahndā in this tribe.

(M. LONGWORTH DAMES.)

DRUZES, the Druzes are a people or a nation living in the Lebanon and Anti-Lebanon, around Damascus and in the mountains of Ḥawrān. They have their own religion and hold a special position in the administrative arrangements of the Ottoman empire.

Their name is derived from that of Darazī [q. v., p. 921]. Their ethnographical origin is obscure. It is probable that they already had distinct racial features before the founding of their religion and that they were never quite converted to Islām. They may be the remnants of some ancient peoples, who sought refuge in the mountains in times of invasion and always retained a certain amount of independence in those places so easy to defend. Benjamin of Tudela, who travelled in the East and died in 1173, believed that they were descended from the Ituraei, who in the time of Alexander's successors became notorious in Asia for their brigandages and were therefore forced by the Romans to fall back on the mountains of Lebanon. In the xvii[th] century they were regarded as the survivors of the Latin Christians, who escaped the massacre at Acre when al-Ashraf Sulṭān of Egypt took this town in 1291 and destroyed the last remnants of Frankish power in the Holy Land; this last tradition is clearly worthless, as it would place the date of the origin of the Druzes much too late; it is however interesting in as much as it is connected with the claim put forward by the Druze chiefs of the xvii[th] century to be descended from Godfrey de Bouillon.

The Druzes, who have an Emīr or a *Ḥakam* at their head, have had two very celebrated Emīrs in the course of their history: the Emīr Fakhr al-Dīn [q. v.], popularly called Fakardin, in the xvii[th] century and the Emīr Bashīr [q. v., p. 671 *et seq.*] in the xix[th].

The descendants of Fakhr al-Dīn, of the family of Ma'n, continued to rule the Druzes till the beginning of the xviii[th] century when the power passed from the family of Ma'n to that of Shihāb.

The Emīr Bashīr belonged to the family of Shihāb.

The withdrawal of the Egyptians from Syria (1840) was followed by a troubled period for Lebanon. There was a reaction among Muhammadans and the Turkish authorities against the Christians. The Druzes and Maronites had hitherto lived on good terms with one another; but the Turks won over the Druzes with gifts and the allies fell upon the Christians in 1840. The Maronites, attacked on several sides, defended themselves successfully at Dair al-Ḳamar; but at Ḥāṣbeyā, they were massacred by the Druzes of Ḥawrān acting in name of the Turks. The Porte deposed the Emīr and sent an Ottoman governor in his stead to Dair al-Ḳamar. This appointment raised the protests of the Powers, who did not wish to see direct Turkish rule established in Lebanon.

Their diplomacy resulted in two Ḳā'immaḳāms being provisionally appointed for Lebanon, one a Druze and the other a Christian; the Porte then separated the Djubail district from Lebanon, and incorporated it in the Pashalik of Tripoli. In September 1844, two Wakīls were installed in the mixed townships, one for the Druzes and the other for the Christians; these officers were to be subordinate to the Druze and Christian Ḳā'immaḳām respectively. The Porte next sought to place the Christian Wakīls also under the Druze Ḳā'immaḳām. The Maronites protested, saying they would rather be under the Pasha of Ṣaidā than under Druzes. On the 30th April 1845, the Druzes backed by the Turks again fell upon the Maronites and massacred them. At the end of this year (1845), the organisation of Lebanon was completed. The principle of separation of the two races under two separate chiefs was recognised and government by two Wakīls in the districts where the population was mixed. The two Ḳā'immaḳāms, Christian and Druze were retained, assisted by two councils, one presided over by the Druze Emīr, and the other by the Christian Emīr.

These councils were composed of ten members each, of whom two were Druze, two Maronite, two Malkite, two Greek and two Muslim. The Christians were therefore in a majority of six to four on them and this plan did not please the Druzes. In 1860 there were again massacres, marked by the most atrocious cruelty, in the Lebanon and Anti-Lebanon, particularly in the districts of Ḥāṣbēyā, Rāshēyā, Zaḥle and Dair al-Ḳamar. Europe at last took action; a body of French troops was sent to Syria and those responsible were punished.

Following the events of 1860, an international commission devised a new organic statute with guarantees. The Madjlis or central administrative council of the Mutaṣarrifik of Lebanon was composed of twelve members. The Druzes had the right to be represented by three of their number: one elected by the Mudīriya of Shūf, a second by the Mudīriya of Matn, and a third by that of Djezzīn. Quiet has not yet absolutely returned to the country. The Druzes and Maronites are at peace with one another, but the Druzes are waging a continual struggle against Turkish authority. From 1879 to 1896, the Druzes of Ḥawrān were constantly fighting bitterly against the regular Ottoman troops. In the latter year the Turks received their submission. Since the Turkish revolution they have become practically independent.

The Druze population has been estimated at a little over 150,000 for the last century or so. In 1842 it was put at 140,000 with 45,000—50,000 fighting-men; in 1855 Taylor put the figure at 120,000 of whom 40,000 were fighting-men. Max v. Oppenheim, in 1899, estimated 132,000 and Cuinet (1896) 150,000. The Druze population of Ḥawrān has been increased by immigration of Druzes from Lebanon and numbers at least 40,000 souls.

The Druzes are a warlike, energetic and valiant people; they would make very good soldiers if their independent spirit did not make them preferably brigands. They can be very cruel; the fiercest are those of Ḥawrān. In spite of their warlike disposition they have some ability as agriculturists and grow the vines which yield the fine Damascus grapes and also mulberries, olives and tobacco. Their women weave and embroider very fine cloths. In their dress the Druzes are distinguished by the turban which is of black or red silk. Their women used to wear a peculiar head-dress called "horn". This was a kind of very high hat which turned over behind; it was of silver or gilt copper among the rich and of pasteboard among the poor. It was fastened by means of a kerchief tied under the chin and by another around the head. A veil of white linen or dark blue silk hung from the top, attached to the horn by black strings of camel-hair. This head-dress was worn by night as well as by day. The women's dress was a short, dark blue tunic, bordered by a broad reddish brown band, with stripes of the same colour on the back, embroidered trousers and yellow shoes.

Religion. The Druzes have as a rule but little religion; they call themselves Muslims, when with Muslims, and Christians, when with Christians. They have no places of worship. What is called the Druze religion is a learned system which is not known to all the people. Those who know it, are called *'Uḳḳāl* (the learned); the others are the *Djuhhāl* (the ignorant). The *'Uḳḳāl* alone take part in the religious meetings which are held in the night from Thursday to Friday; the place of meeting is called *Khalwa* (retirement). The most meritorious of the *'Uḳḳāl*, in the proportion of one in 50, become *Adjāwīd* (perfect).

Belief in metempsychosis is wide spread among the people; the good are born again in infants, but the wicked return in the bodies of dogs. Polygamy is allowed and it is said that the marriage of brother and sister is sometimes practised; but the law forbids this (cf. de Sacy, ii. 700).

The religion of the Druzes in its learned form, belongs to the Bāṭinī system. It was founded in the time of the Fāṭimid Caliph Ḥākim (386—411 A. H.) by Ḥamza [q. v.] and Darazī [q. v., p. 921]. It is known to us from over a hundred works to be found in European libraries. These scriptures, some of which go back to Ḥamza are professions of faith, expositions of doctrine, works dealing with the organisation of the sect, diplomas for the installation of different ministers, letters, fragments of polemics against the Nuṣairīs and the Mutawālī, neighbours of the Druzes, against the Ismā'īlīs, from whom they separated and against several ministers and missionaries who had corrupted the doctrine from the beginning. These dissenters are accused of preaching licentious doctrines and favouring the worship of the calf. The figure of a calf actually appears in the ceremonies of the Druzes and some authors say they worship it; but it is probable that in the true religion the calf is the symbol for the demon and only appears as an object of execration.

The Ismā'īlī doctrine was based on the idea that God became incarnate in man in all ages, and God himself or at least the creative force, was conceived as composed of several principles which proceeded one from the other. Each of these principles became incarnate in a man. Druze theology retained this system. According to it the Caliph Ḥākim represented God in his unity; this is why Ḥamza called his religion "Unitarian". Ḥākim is worshipped and is called "Our Lord". His eccentricities and his cruelties are explained symbolically. He was the last incarnation of God; they do not admit that he is dead; he is only

hidden, in a state of "occultation" and will reappear one day, according to the Mahdist idea. Below Ḥākim there are five superior ministers who are incarnations of principles that have come forth from God. The first is the incarnation of universal intelligence (*ʿAḳl*), the second of universal soul (*Nafs*). The conceptions of universal soul and universal intelligence are derived from philosophy. The third minister is the incarnation of the Word (*Kalima*) which is produced from the soul by the intelligence; the fourth is called the Right Wing or the Preceder; the fifth the Left Wing or the Follower. Together they are called *Ḥudūd*, i. e. bounds or precepts, and they have other symbolic names also. At the foundation of the sect these ministers were respectively: Ḥamza the founder; Ismāʿīl ibn Muḥammad al-Tamīmī, one of the writers of the sect; Muḥammad ibn Wahb; Salāma ibn ʿAbd al-Wahhāb al-Samurrī; Abu 'l-Ḥasan ʿAlī b. Aḥmad al-Samūḳī.

Below these superior ministers were those of lower rank, divided into three classes. These are not incarnations of eternal principles, they are functionaries, preachers and heads of communities. They are called in the order of the classes, *Dāʿī* [q. v., p. 895ᵇ *et seq.*] or missionary; *Maʾdhūn* or he who has received permission; the *Mukassir*, destroyer, also called *Naḳīb*. The *Dāʿī* is also called "industry"; the *Maʾdhūn*, "the opening", he who opens the door to the aspirant; and the *Mukassir*, the "phantom", the apparition in the night of error. The Bāṭinīs employ the same terms in a somewhat different order.

The knowledge of the nature of God, of his attributes, his manifestations in the series of principles which are incarnate in the ministers, constitutes the dogmatics of this religion. Its moral system is summed up in seven precepts which take the place of those of Islām viz., to love truth (but only between believers); the adepts are pledged to watch over one another's safety; to renounce the religion to which one formerly belonged; to cut one's self off from the demon and those that are living in error; to recognise the existence in all ages of the principle of divine unity in humanity; to be satisfied with the works of "Our Lord" (Ḥākim), whatever they are; to be absolutely resigned to his will — it seems to be understood: in as far as it is manifested through his ministers. — These precepts are binding on both sexes.

Bibliography. Many travellers have written on the Druzes: B. J. Taylor, *La Syrie, la Palestine et la Judée* (Paris, 1855), pp. 76—83; 35—40; Lamartine, *Voyage en Orient* (1832-1833), chapters on the Emīr Beshīr and on the Druzes; Mrs. Charles Roundell, *Lady Hester Stanhope* (London, 1909), pp. 54, 91, 216; Cᵗᵉ F. van den Steen de Jehay, *De la Situation légale des Sujets Ottomans non-Musulmans* (Brussels, 1906), chapter on the Druzes; Churchill, *Mount Lebanon 1842—1852* (London, 1853); *The Druzes and the Maronites under Turkish rule; from 1840 to 1860* (London, 1862); F. Tournebize, *Les Druzes*, in the *Études des Pères de la Cⁱᵉ de Jésus*, 5 Oct. 1897; Max Freiherr von Oppenheim, *Vom Mittelmeer zum Persischen Golf*; *Magasin Pittoresque*, 1841, p. 367 (costumes), and 1861, p. 226; François Lenormant, *L'Histoire des Massacres de Syrie en 1860*; A. de la Jonquière, *Histoire de l'Empire Ottoman* (Paris, 1881), pp. 401—505, and pp. 521—525. — On the literature and religion of the Druzes, cf. Silvestre de Sacy, *Exposé de la Religion des Druzes* (2 vol. Paris, 1838); C. F. Seybold, *Die Drusenschrift Kitāb al-Nuḳaṭ wal-Dawāʾir* (Tübingen, 1902). (B. Carra de Vaux.)

DUʿĀʾ (A.) "blessing", "prayer", in the same sense as the Hebrew *Beraka*, hence comes ultimately to mean "curse", not to be confused with *Ṣalāt*, which is often also translated prayer, but really means the whole service.

As the first Sūra of the Ḳurʾān forms the usual Muslim prayer, it is commonly called *Sūrat al-Duʿāʾ*. There are of course quite a number of other forms of prayer for different occasions, which are given in the catalogues under the name *Duʿāʾ* or *Ḥizb*. The *Ḥizb al-Baḥr* of al-Shādhilī [q. v.] is for example very popular, as is al-Djazūlī's [q. v., p. 1032 *et seq.*] collection of prayers. Belief in the magic power of the word is very general. Cf. the articles DHIKR, ḤIZB, ṢALĀT, WIRD.

DŪĀB (P.), "two waters", is applied in India generally to the land, lying between two rivers ("the land with two rivers"), and more particularly to the very fertile plain liable to inundation, between the Djamna and the Ganges from the Siwālik hills to their union near Allāhābād, cf. *Imperial Gazetteer of India*, xi. 365 *et seq.* — W. Rickmer Rickmers proposes to give the same name to the district between the Āmū-Daryā and the Sīr-Daryā (*Geograph. Journal*, xxx. 557).

DUBAIS B. ṢADAḲA ABU 'L-AʿAZZ NŪR AL-DAWLA AL-MAZYADĪ, a wandering cavalier of the Crusading period, who, like his ancestors (cf. the article MAZYADIS), bore the title Malik al-ʿArab and after an adventurous life was treacherously murdered in 529 (1135). Dubais fell into the hands of the Saldjūḳ Sulṭān Muḥammad in the sanguinary conflict in 501 (1108), in which his father was slain; the Sulṭān treated him honourably after imposing an oath of fealty on him, but would not allow him to return to al-Ḥilla, his native district. It was only after the death of Muḥammad in 511 (1118), that his successor Maḥmūd gave Dubais the desired permission and he at once took up the influential position in al-Ḥilla that his father had held. In the hope of more firmly establishing his power, like his father before him, by taking advantage of the dissensions among the Saldjūḳs, he allied himself with Masʿūd, Maḥmūd's brother, in his attempt to win the sulṭānate. In the war that followed, Maḥmūd, however, was victorious and Dubais found himself forced to take refuge with his father-in-law Ilghāzī, lord of Mārdīn, but he submitted to the Sulṭān when the latter's troops besieged Ḥilla and Kūfa. Soon afterwards he quarrelled with the Caliph al-Mustarshid and lost the battle of al-Nīl against him in 517 (1123). He himself had a hairbreadth escape but appeared soon afterwards when he led the marauding Beduins of the Montafiḳ tribe against Baṣra. But when the Caliph sent troops thither, Dubais did not dare meet them, but betook himself to the Crusaders whom he persuaded to attack Ḥalab (Aleppo). They were not successful in taking the town and, when they retired, Dubais went to the Saldjūḳ prince Toghrul and persuaded him to march on Baghdād and subdue the province of al-ʿIrāḳ. But the Caliph was able to prevent this and Toghrul and Dubais had to seek refuge with the Saldjūḳ Sulṭān Sandjar. Sandjar

thereupon went to al-Raiy and summoned his nephew, Sulṭān Maḥmūd to his side and he obeyed the call. The two Sulṭāns thereupon came to an agreement and Sandjar interceded with Maḥmūd on behalf of Dubais, who wished to return to his home in al-Ḥilla and be forgiven by the Caliph. But nothing came of this through Dubais's further offences; after twice plundering Baṣra he had to flee to the Arabian desert. While here he received an invitation to come to Ṣarkhad; the lord of this place had died and his concubine made an offer of marriage to Dubais in the hope of thus being able to remain mistress of the place. Dubais did not hesitate to accept this invitation, but lost his way in the desert and was captured by some Kalbī Beduins, who handed him over to Tādj al-Mulūk Būrī, lord of Damascus. The latter sent him to ʿImād al-Dīn Zengī, lord of al-Mawṣil, who wished to have him beside him as he could be useful to him in his plans. We soon find the two jointly undertaking a campaign against the Caliph in 526 (1132), but with disastrous results; they were put to flight by the Caliph. Dubais managed to hold out for a time in al-Ḥilla and Wāsiṭ, but had finally to give up the struggle. He next attached himself to Sulṭān Masʿūd, who in 529 (1136) took the Caliph prisoner in battle and brought him to Marāgha. There he was treacherously murdered, according to some accounts at the instigation of the Sulṭān, who is even said to have put Dubais to death also, to avert suspicion from himself. While Dubais was waiting in the audience-chamber one of the Sulṭān's pages came up to him unawares and cut off his head. "Thus", says Weil (*Geschichte der Chalifen*, iii. 231 *et seq.*) "within the interval of one brief month towards the end of the year 529, died the only two Arabs, who, although they had always been sworn foes, had always endeavoured to set limits to the aggressions of foreign rule. They were both of very unreliable character and followed a selfish policy. — Both were moreover well liked as men and honoured as poets and patrons of poets. — Dubais has been given immortality in a maḳāma of Ḥarīrī (xxxix.), in which the poet describes him as one of the noblest figures in Islām".

AL-DUBB AL-AṢGHAR and AL-DUBB AL-AKBAR = the Little and the Great Bear, the translation of the Greek names Ἄρκτος μικρά and Ἄρκτος μεγάλη of the two northern constellations. The older Arabic name for these constellations was *Banāt Naʿsh* (or *Banāt al-Naʿsh*) = the daughters of the bier, *al-Ṣughrā* for the little and *al-Kubrā* for the Great Bear. Ḳazwīnī remarks that the stars which form the quadrangle are called *al-Naʿsh* (the bier) and the three that form the tail are called *al-Banāt* (the daughters). Golius (edition of al-Farghānī, notes on p. 64) thinks that these daughters are the women mourners who precede the bier. — The feminine form *Dubba* (in the mediaeval west written *Dubhe*) particularly designates the star α Ursae Majoris; this name probably comes from the Latin translation of the Tables of Alfonso, which we know were originally written in Castilian (1252).

DŪD AL-ḲAZZ, the Silkworm. Ḳazwīnī and Damīrī give accounts of its culture which supplement one another and may therefore be dealt with separately. According to Ḳazwīnī, the worm, when it has eaten enough, seeks a place on trees or thorns, draws thin threads out of its saliva, and weaves a ball around itself as a protection from wind and rain; it then sleeps its appointed time; all this is done through the instinct given it by God. In spring, when the leaves of the mulberry tree appear, the eggs (*bazr*) are taken and placed in pieces of cloth; women carry them for a week under their breasts, so that the warmth of the body affects them; they are then spread on chopped mulberry leaves, whereupon the young worm begins to move and eat the leaves. The caterpillars do not eat for three days — this is the "first sleep" — then they eat for a week till the second sleep of 3 days when the same proceeding is repeated. A great deal of food is then given them, so that they soon begin to make cocoons (*failaḳīyāt*). A thing like a spider's web begins to appear over their bodies; when rain falls and softens the cocoon, the worm pierces it and crawls out; it has now grown two wings and it flies away in which case no silk (*ibrīsham*) is obtained from it. But when the cocoon is placed in the sun after it is finished, the worm dies and the silk may be taken from it. A number of cocoons are preserved so that the fly may come out and lay eggs, which are kept till next year in a clean earthenware or glass vessel.

According to Damīrī, the silkworm or "Indian worm" in the egg stage is as large as a figseed; the creatures come out, when placed in warm places, without being artificially hatched, but they are placed in their bosoms by women if they do not come out at the proper time. They eat the leaves of the white mulberry tree and gradually attain the size of a finger while their colour changes from black to white. This takes about 60 days. The worm then weaves a covering of the size of a walnut till the material is exhausted and remains ten days in the cocoon, when it comes out as a white butterfly with wings, which are constantly in motion. Soon afterwards the males and females copulate by attaching their tails to one another, and after they have separated, the female lays her eggs on white pieces of cloth, spread below it to collect all the eggs; the creatures then die. If silk (*ḥarīr*) is wanted, the cocoons should be placed ten days after they are finished in the sun for one day.

The silkworm is the emblem of the miser, who lays up treasures for himself, which his mocking heirs take; if these however make good use of the wealth that has fallen to them, they are not responsible for the avarice of the other.

DUDJAIL. [See KĀRŪN.]

DŪGHLĀT or DŪḲLĀT, originally the name of a Mongol tribe: Rashīd al-Dīn (ed. Berezin, *Trudi vost. otd. arkh. obshč.*, xiii. text, p. 47 and

52, gives as their ancestor, Būdandjar Dūķlān, a brother of Čingiz-Khān's great-grandfather. It has not yet been ascertained what was Abu 'l-Ghāzī's (ed. Desmaisons, p. 65) authority for the explanation he gives of the word *dūķlān* (he says it means 'lame' in Mongol). In Rashīd al-Dīn neither this nor any other explanation of the word is given; but this etymology must date from the period of Mongol rule, for as Berezin (*Trudi* etc., xiii. 180) shows, there is actually in Mongol a word "*doghlan*" meaning "lame"; Abu 'l-Ghāzī and his contemporaries did not, of course, know Mongol. Berezin, on the authority of Abu 'l-Ghāzī's explanation, transcribes the name of the tribe as "Dogolan", in the plural "Dogolat" and in this he is followed by others; but this transcription is ruled out by the form "Dulat" which is now the usual one in Central Asia.

Of the history of the tribe, Rashīd al-Dīn can only tell us that, during the tribal feuds out of which the Mongol empire was to arise, it always took the side of Čingiz-Khān; and that nevertheless neither in this period nor at a later did a man of any note appear in the ranks of the Dughlāt (*Trudi* etc., vii. 275). In the second half of the viii[th] = xiv[th] century, on the contrary, we find the Dughlāt in Central Asia as an important tribe, representatives of whom held prominent positions not only in the empire of Timūr and his successors, but in the eastern provinces of what had been the Čaghatāi [q. v., p. 811[b] *et seq.*] kingdom also. In the *Ẓafar-Nāmah* of Sharaf al-Dīn Yazdī the Emīr Dā'ūd of the Dughlāt tribe, the husband of Timūr's sister Ķutlugh-Turkān, is frequently mentioned as an envoy and general, and once (Ind. ed., i. 216) as military governor (*Dārūgha*) of Samarķand. The Dughlāt were still more important in the modern Chinese Turkestān, where they ruled a wide kingdom as local princes and sometimes also the whole country as viceroys and were able to raise to the throne and depose princes of the ruling house as they pleased. What we know of the history of these princes is derived almost entirely from family traditions, not always thoroughly to be relied on, contained in the *Ta'rīkh-i Rashīdī* of the last of their line, Muḥammad Ḥaidar Dughlāt. As was done in Mā warā' al-Nahr for Timūr, a legend is invented in this work for the house of Dughlāt, according to which its founder ruled the same territory and enjoyed the same privileges under Čaghatāi or even under Čingiz-Khān as his descendants at a later period; in one passage of the *Ta'rīkh-i Rashīdī* (transl. Ross, p. 7) Urtūbū is given as the founder of the line, in another (ibid., p. 294) Būlādjī ... (or Bāidughān). His successor Būlādjī (in Abu 'l-Ghāzī, ed. Desmaisons, p. 156 *et seq.*: Fūlādjī, a form, which is linguistically easier to explain, but has no authority in the manuscripts) is said to have raised Khān Tughluķ-Timūr to the throne in Aķsū about 748 = 1347 (*Ta'rīkh-i Rashīdī*, p. 6 *et seq.*); on the other hand, the same authority (p. 14) gives not Būlādjī, but his elder brother and predecessor (p. 38) Tūlik in the reign of Tughluķ-Timūr as first Amīr of the kingdom (Ulus-Begī). Būlādjī, while in Ķunduz, is said to have received in the year of the pig, a document from Tughluķ-Timūr, in which the "nine privileges" (*Ta'rīkh-i Rashīdī*, p. 54 *et seq.*) of the Khān's house were recognised. This cyclic year would correspond to 1513, while Tughluķ-Timūr according to the *Ẓafar-Nāmah* (i. 59) did not come to Ķunduz till the year 1361 (the year of the ox); this throws doubts on the authenticity of the document. Muḥammad Ḥaidar says that he had with his own eyes seen the document which was written "in the Mongol language and character"; it was afterwards lost, "during the troubled times of Shaibānī-Khān" (p. 56). As Shaibānī died in 916 = 1510 and the author, as he himself tells us (p. 305), was 15 years of age in the year 920 = 1514 (the cyclic year of the swine given there corresponds to 1515 A. D.), he could only have seen the document while quite a boy.

The Amīrs Shams al-Dīn and Ķamar al-Dīn are given amongst others in the *Ta'rīkh-i Rashīdī* as brothers of Būlādjī who is mentioned nowhere else. The former appears also in the *Ẓafar-Nāmah* (i. 104 *et seq.*) as a valiant Amīr, who was in command of the Mongol army in the year 1365 (year of the snake); but nothing is said there of his being a member of the Dughlāt tribe or of his relationship to Ķamar al-Dīn. Ķamar al-Dīn is first mentioned in the *Ẓafar-Nāmah* (i. 178) in the year 1368 (year of the ape) as leader of the Mongol army; he had slain his Khān Ilyās Khōdja, son of Tughluķ-Timūr, and seized the supreme power. He is last mentioned in the same work (i. 494 *et seq.*) in 1390 when, defeated by Timūr, he had to take flight to the Irtish and thence farther north "into the land of Tūlas, where there are many sables and ermines". His brother Ķuṭb al-Dīn (not mentioned in the *Ta'rīkh-i Rashīdī*) entered Timūr's service and, in the year 1393, took part in the siege of Takrīt in Mesopotamia (*Ẓafar-Nāmah*, i. 650).

After Ķamar al-Dīn had been overthrown the power passed into the hands of Khudāidād, son of Būlādjī; at the time of his father's death shortly before Tughluķ-Timūr, i. e. about 1360—1362 he was seven years old (*Ta'rīkh-i Rashīdī*). Khudāidād had Khiḍr-Khōdja, presumably a son of Tughluķ-Timūr, proclaimed Khān; he is said to have appointed other five Khāns in the Mongol empire in course of time (*ibid.*, p. 67 *et seq.*). Khudāidād is not mentioned in the *Ẓafar-Nāmah*; according to the *Maṭla' al-Sa'dain* of 'Abd al-Razzāķ Samarķandī [q. v., p. 64[a]], who in this passage is only quoting the text of the *Zubdat al-Tawārīkh* of Ḥāfiẓ-Abrū with a few alterations, he always took the side of Shāh-Rukh and Ulugh-Beg, even against his own Khāns (the latter ruled till 812 = 1409 in the name of his father in Samarķand). When in 828 = 1425 Ulugh-Beg undertook a campaign against the Mongol empire, Khudāidād joined his army on the other side of the Čarin in the present district of Semirečye and was received by him with the honour due to one of his advanced years (*Maṭla' al-Sa'dain*, MS. in the Univ. of St. Petersburg, N°. 157, f. 230[b]). This secession to the enemy of his native land is excused by family tradition on religious grounds: Khudāidād had long intended to perform the pilgrimage to Mecca, but could not receive permission from his Khān and was only able to carry out his desire by an alliance with Ulugh-Beg; he afterwards died in Medina and was buried there (*Ta'rīkh-i Rashīdī*, p. 69 *et seq.*). The same authority tells us that Khudāidād ruled for 90 years and went on his pilgrimage when 97; according to the dates given above, however, he could not have been more than 70 at the time.

Khudāidād had previously divided his lands among his sons and brothers (*Taʾrīkh-i Rashīdī*, p. 100); in spite of his father's secession his eldest son Muḥammad Shāh was confirmed in the rank of Ulūs-Begi by Wais-Khān; his residence is said to have been *At-Bāshī* (in the south of the modern Semirʿečye) (*ibid.*, p. 78). Saiyid Aḥmad, Khudāidād's younger son, had received Kāshghar and Yārkand from his father, but had been driven out of them by the Tīmūrids (according to ʿAbd al-Razzāḳ, the Tīmūrids took Kāshghar in 819 = 1416, cf. *Notes et Extraits*, xix, part I, p. 296), and died before his father. His son Saiyid ʿAlī afterwards succeeded in regaining Kāshghar from the Tīmūrids and reigned there for 24 years; he seems to have succeeded his uncle as Ulūs-Begi; on his tomb in Kāshghar the year of his death is given as 862 = 1457-1458; he was then 80 years of age (*Taʾrīkh-i Rashīdī*, p. 87 and 99; if this is true his grandfather must have been little over 20 years old at the time of his birth. His sons Sāniz-Mīrzā (862—869 = 1457-1458—1464-1465) and Muḥammad Ḥaidar (869—885 = 1464-1465—1480) succeeded him in Kāshghar; the latter was succeeded by Abū Bakr Mīrzā, son of the former, who drove his uncle and with him the Khān Yūnus out of the western part of the modern Chinese Turkestān and founded an independent kingdom there with Yārkand as his capital, which survived till 920 = 1514 when he was overthrown by Saʿīd Khān. The author of the *Taʾrīkh-i Rashīdī* (p. 293) makes Abū Bakr rule for 48 years, which does not agree with the dates given by him.

The fall of Abū Bakr marked the end of the rule of the house of Dūghlāt in Chinese Turkestān; under Saʿīd Khān the Amīrs of this house no longer appear as independent princes, but only as leaders of divisions of the army in the Khān's service. In earlier times, when the Dūghlāt were still ruling in Kāshghar, other Amīrs of this tribe had arisen, who succeeded in winning strong positions for themselves and participated in the struggles for the throne, in which we often find them fighting their kinsmen in Kāshghar, just as during the war against Abū Bakr the historian Muḥammad Ḥaidar and his uncle Saiyid Muḥammad Mīrzā were in Saʿīd Khān's camp. Muḥammad Ḥaidar, the historian's grandfather, had rebelled against Khān Yūnus in Aḳsū after being driven from Kāshghar, made peace with him soon afterwards, was appointed governor of Ośh in Farghāna, and while there had made an unfortunate attempt to renew the war against Abū Bakr; he was taken prisoner by the latter and allowed to go to Badakhshān; he then went first to Samarḳand to the Tīmūrid Aḥmad Mīrzā, and then to Tāshkent to his old master Yūnus, whom he is said to have attended as physician during his last illness (892 = 1487). His eldest son, Muḥammad Ḥusain, the father of the historian, was 12 years old in 885 = 1480 (*Taʾrīkh-i Rashīdī*, p. 106 *et seq.*); after the departure of his father from Farghāna he remained two years there with the Tīmūrid ʿOmar Shaikh and then returned to his close friend Sulṭān Maḥmūd Khān, the son and successor of Yūnus; the latter appointed him governor of Ūrā Tepe in 900 = 1495, but he had to hand over this town to the Uzbegs in 908 = 1503, after Sulṭān Maḥmūd Khān's defeat at Akhsī; he then went to Ḳarātegin and thence to the land of the Uzbegs where he became intimate with Maḥmūd, the brother of his former enemy Shaibānī; after the death of his friend in 909 = 1504, he went over to the Tīmūrids from the Uzbegs again, went first to Khorāsān to Sulṭān Ḥusain Mīrzā, from him to Bābur at Kābul, took part in a conspiracy against the latter in 912 = 1506-1507, was pardoned by him and returned to Shaibānī once more, who had him put to death in Herāt in 914 = 1508. His brother Saiyid Muḥammad Mīrzā, who was 41 years of age in 920 = 1514 (*Taʾrīkh-i Rashīdī*, p. 305) had formerly been in the service of Khān Sulṭān Maḥmūd, and been handed over to the Uzbegs by his enemies; he was released by Djānī-Beg, Shaibānī's cousin and made another attempt to set himself up in Andidjān; on being driven out of this district he went with Saʿīd Khān to Chinese Turkestān. In Saʿīd Khān's kingdom he occupied a prominent position till the latter's death in 939 = 1533, but was murdered in the beginning of 940 (Thursday 24th July 1533) by command of his successor ʿAbd al-Rashīd (*Taʾrīkh-i Rashīdī*, p. 450). On the life of the historian Muḥammad Ḥaidar Dūghlāt, see the separate article.

The name Dulāt (in Vambéry, *Das Türkenvolk* etc., p. 286: Talatai) is borne at the present day by a numerous (according to Aristow, *Zamětki ob etničeskom Sostavě Tjurkskikh plemen* etc., p. 77 numbering about 40,000 tents) branch of the "Great Horde" of Ḳazaḳ (called Kirghiz by the Russians) between the Ili and the Sir-Daryā. The word Dulāt appears to be derived from Dūghlāt and like the names of most of the subdivisions of the Ḳazaḳ, to have been brought west by the Mongols; Aristow's attempt to connect the Dulāt with the Tu-lo of the Chinese and the Bulghār royal house of Dulo, is certainly futile. Unlike some other originally Mongol tribal names found among the Ḳazaḳ (Naiman, Djalayir etc.) the word Dūghlāt is no longer found in Mongolia with this meaning; the Dūghlāt therefore must have left Mongolia in the xiiith century either entirely or leaving only a few of their number who have since been incorporated in other tribes.

(W. Barthold.)

ḌUḤĀ (A.) "forenoon"; a time of prayer, see Ṣalāt; it is also the title of Sūra xciii.

AL-DUKHĀN (A.) "Smoke", title of Sūra xliv.

DULAFIDS. The Dulafids were the descendants of Abū Dulaf al-Ḳāsim b. ʿĪsā al-ʿIdjlī (see the article al-Ḳāsim), who held a more or less independent position in Karadj (between Hamadān and Iṣpahān) and are therefore treated by some Arab historians as an independent dynasty. After the death of the founder of the dynasty in 228 (842) his son ʿAbd al-ʿAzīz became head of the family and on his death in 260 he was followed by his sons Dulaf (died 265 = 878-879), Aḥmad (died 280 = 893), ʿOmar and al-Ḥārith, called Abū Lailā, in succession. When the last named was slain in 284 = 897, the power of the Dulafids came to an end.

Bibliography: Ibn al-Athīr, *Kāmil* (ed. Tornberg), vi. and vii.

DULDUL, the name of the Prophet's white she-mule, which was ridden by him on his campaigns. She survived him and when in her old age, she lost her teeth, they used to feed her by putting corn in her mouth. She is said to have survived into Muʿāwiya's reign and to have died

at Yanbu'. According to a Shī'ī legend she retained her vigour so long that 'Alī was able to ride her on his campaigns against the Khāridjīs. She had been sent Muḥammad as a present, with the ass 'Ofair, by Muḳawḳis; this was the first occasion on which the Muslims had seen a she-mule. According to another tradition, which confuses Duldul with another she-ass called Fiḍḍa, Muḥammad had received her from Farwa b. 'Amr al-Djudhāmī. The name Duldul properly means "porcupine" (*Tādj al-'Arūs*, vii. 324; *Lisān al-'Arab*, xiii. 264), but as this name is not a very appropriate one for a she-mule, it was probably only with reference to its speed that it was given.

Bibliography: Nawawī, *Biographical Dictionary*, p. 46; Ibn al-Athīr, *Kāmil*, ii. 238; Ṭabarī, i. 1783; Damīrī, *Ḥayāt al-Ḥayawān*, i. 420. (Cl. Huart.)

al-**DULFĪN**, the Arabic form of the Greek ὁ δελφίς (also δελφίν), is the name given by the Arab astronomers to the constellation of the Dolphin. The older or popular name among the Arabs was *al-Ṣalīb* = the cross, and the outermost star of the constellation was called *'Amūd al-Ṣalīb* = pillar or basis of the cross (the astronomers call it *Dhanab al-Dulfīn* = tail of the dolphin). In Ḳazwīnī we also find the name *al-'Uḳūd*, probably to be translated "the pearls" (of the necklace), for the four stars which are close together forming a rhombus.

Bibliography: al-Battānī, *Opus astronomicum* (ed. Nallino), ii. 153; iii. 253; al-Ḳazwīnī, *Kosmographie* (ed. Wüstenfeld), i. 34; L. Ideler, *Untersuchungen über den Ursprung u. die Bedeutung der Sternnamen* (Berlin, 1809), p. 110–111. (H. Suter.)

DULŪK, a place in Northern Syria, N.W. of 'Aintāb [q. v., p. 214a], is the ancient Doliche, at the junction of the roads from Germanicia and Nicopolis to Zeugma. Dulūk, which was captured by 'Iyāḍ b. Ghanm, was one of the fortresses on the Byzantine frontier (cf. 'Adī b. al-Riḳā''s verse in Yāḳūt, ii. 583 and Nöldeke's note on it in the *Zeitschr. d. Deutsch. Morgenl. Gesellschaft*, xliv. 700) and at a later period belonged to the Djund al-'Awāṣim [q. v., p. 515 *et seq.*] instituted by Hārūn. In the wars with the Byzantines of the Ḥamdānid Saif al-Dawla and the poet Abū Firās it played a part (cf. Yāḳūt *loc. cit.*) and, according to Ibn al-Athīr, viii. 404, it was taken by them in the year they took the latter prisoner (351 = 962). The place appears gradually to have lost its importance with the rise of 'Aintāb. This can be the only explanation of Yāḳūt's statement (iii. 759) that 'Aintāb was once called Dulūk. The name of Doliche has survived in that of the village of Dülük-köi and of Tell Dülük to the south of it, on which now stands the chapel of a Muslim saint, probably the successor of Zeus Dolichenus (see Cumont in Pauly-Wissowa, iv. 1276 *et seq.*).

DŪMAT al-**DJANDAL**. [See DJAWF AL-SIRḤĀN.]

DUNAISIR, a town in Mesopotamia, about 10 miles S.W. of Mārdīn in Lat. 37° 12' N. In the middle ages, particularly under the Urtuḳids, it attained great prosperity and importance as a trading centre, as the considerable ruins that still survive (notably the ruins of two mosques) show. The half ruined Kurd village of Kōč Ḥiṣār = "ancient citadel" (abbreviated to Kōsar; the name is often given in a corrupt form by the older travellers) now lies in the area occupied by the ancient town; this name was known even to Yāḳūt. To the east of Dunaisir lies a vast mound of ruins, Tell Ermen, which must mark the site of an ancient town; Sachau identified the latter as the celebrated Seleucid capital of Tigranokerta but C. F. Lehmann's researches now show that this is to be located in Maiyāfāriḳīn; on this point cf. Streck in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lxvi. 302. According to G. Hoffmann (*Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxxii. 741), Dunaisir should be identified as the fortress of Adenystrai mentioned by Dio Cassius (lxviii. 22). At the southeast base of Tell Ermen lay the large Armenian settlement of Tell Ermen (the hill of the Armenians) which took its name from the hill.

DŪNGAN (Dōngan, Tungan), the name given to Chinese Muslims, [cf. the article CHINA, p. 850a; and also the articles TURKS and TURKESTAN.]

DUNYĀ (A.), the earthly, lower world, this world here below. The word is used in the Ḳor'ān and in Muslim theology in a disparaging sense of "this world" in opposition to the next. Muḥammad's use of this word quite recalls that of Christian preachers: "Those that buy this earthly life at the price of the future life, shall not receive any relief from punishment nor shall they be helped" (*Ḳor'ān*, ii. 80); — "Ye prefer the life of this world; and yet the hereafter is better and more lasting. This is found in the ancient books, in the books of Abraham and Moses" (*Ḳor'ān*, lxxxvii. 16—19). We see from the latter quotation that Muḥammad did not claim to be original when making exhortations of this kind; but what he here attributes to Judaism, ought to have been referred to Christianity.

The Imām al-Ash'arī quotes another passage which contains rather a fine picture "I warn you" he writes "against the world, it is a brilliant coloured and illusive meadow, which deceives its inhabitants as the Ḳor'ān tells us: "Propound unto them the parable of the life of this world; it is like the water we send down from the heavens; and the plants of the earth are mingled with it and on the next morning, they are dry, and the wind scatters them, for God is all powerful" (xviii. 43). . . . All that is on earth shall pass away (lv. 26); prepare therefore your works in view of the lasting abode and eternal life.

In his treatise entitled *al-Durra al-fākhira*, "The precious Pearl", Ghazālī imagines that God at the end of time, when all beings are dead cries out "O earthly world! o vile world! (*yā dunyā, yā dāniya*) where are thy lords and thy rulers? Thou has seduced them by thy attractions, thou has distracted them from their future destiny by thy splendour!" And after the resurrection the same author makes "the earthly world" appear "in the guise of a grey-haired old woman of extreme ugliness"; men are asked "Do ye recognise her?" They answer "we take refuge with God to escape from her". They are told: "She is the earthly world for which ye have hated and envied one another".

(B. Carra de Vaux.)

DURAID b. al-Ṣimma al-Djushamī was descended from Djusham b. Muʿāwiya b. Bakr b. Hawāzin. His real name was Muʿāwiya and that of his father al-Ḥārith. He was one of the bravest horsemen and one of the best poets of the Arabs, who preferred him even to ʿAntara. His father had commanded his tribe of Djusham on the day of Makhla in the war of the Fidjār, and died shortly afterwards in another battle. Sometime after the conclusion of that war, another broke out between Kināna and Sulaim assisted by Djusham. Duraid had the misfortune to be taken prisoner by Firās, a sub-tribe of Kināna, but, as he had on a former occasion presented his lance to a member of that tribe, he was set at liberty, and never again fought with them, though he is said to have made a hundred raids, all of them successful. Towards the end of his life he wished to marry the famous poetess al-Khansā, who was of Sulaim the brother tribe of Hawāzin. He had four full brothers who were all killed in battle before himself, the best known being ʿAbd Allāh, who perished in a raid against Ghaṭafān, in which Duraid also narrowly escaped with his life. ʿAbd Allāh's famous steed Ḳirāḥ was captured on the day his master was killed (Cf. Ḥarīrī, *Maḳāma* 45; Freytag, *Arab. Prov.* ii. 210). One of the last acts of Duraid was to play the part of peacemaker in the quarrel which arose about the chieftainship of Sulaim after the death of Muʿāwiya and Ṣakhr the brothers of al-Khansā. He perished in the battle of Ḥunain in the year 8 A. H. He had not professed Islām. Owing to his excessive generosity his last years were spent in the deepest poverty. He was named 'the brother of Hawāzin' (Ṭabarī, i. 3344, where ʿAlī quotes one of his verses: also 3368).

(T. H. Weir.)

DURKĀNĪ, a Balōč clan forming part of the Gurčānī tribe. The Durkānīs are descended from the Dōdāis, a Rādjpūt tribe absorbed at an early date into the Balōč confederation. They are a mountain race inhabiting Mt. Drāgal in the Sulaimān Mts. and speak the Balōčī language.

(M. Longworth Dames).

al-**DURR**, the pearl. The ancient legend of its origin is found at great length in the Arab authors, first in the *Petrology* (*Steinbuch* ed. Ruska) of Aristotle, then with variants in the Ikhwān al-Ṣafā and the later cosmographers. According to it, the aṣṭūrūs (*ὄστρεον*) rises from the depths of the sea frequented by ships and goes out to the Ocean. The winds there set up a shower of spray and the shells open to receive drops from it; when it has collected a few drops, it goes to a secluded spot and exposes the drops morning and evening to the breeze and the gentle heat of the sun, till they ripen. It then returns to the depths of the sea, where it takes root at the bottom and becomes a plant. If the sun or the air reach it at midday or in the night, the pearls are destroyed; they are also ruined if they stay too long at the bottom of the sea, just as over-ripe dates lose their beauty and flavour.

Scattered among these fables we find a few real facts and critical observations, for example the statement, that the shells though rough and unclean outside, are smooth and brilliant within, or that the substance composing the pearl is identical with that which lines the interior of the shell, which points to its being produced from the latter. We also find a comparison with the hen's egg or with the child in its mother's womb. Of particular interest is the statement that there is a worm in the pearl, for recent research has shown that the formation of pearls is actually the work of parasitic worms (cf. Meisenheimer, *Naturw. Wochenschrift*, 1905, p. 273 *et seq.*).

Masʿūdī gives us the earliest account of the provenance of pearls in various parts of the Indian Ocean and of the pearl-fisheries of the Persian Gulf; in his *Murūdj al-Dhahab*, he refers to an earlier work of his in which he appears to have drawn upon Yaḥyā b. Māsawaih's book on stones, which was extracted from Tīfāshī. According to him the only pearl-fisheries are on the coast of the sea of Habash at Khārak in the Persian Gulf, at Ḳaṭar, ʿOmān and Serendīb. The divers live only on fish and dates; a slit is made in their necks below the ear, through which they can breathe, for they close the nostrils by clasping a piece of tortoise-shell on the nose (or according to Yaḥyā b. Māsawaih, they place a long reed in the nose and breathe through this). They can remain half an hour below the water. They put cottonwool steeped in oil in their ears; when under the water they squeeze some of it out so that it becomes quite bright. They paint their legs with a black substance lest they should be devoured by the monsters of the deep. While under the water they communicate with one another by a kind of barking sound. Ibn Baṭṭūṭa also gives some of these fables, but on the whole his account of the pearl-fisheries is based on his personal observations at Sīrāf. There the Banū Sāsān dive for pearls in a calm bay. In the months of April and May many boats assemble here with divers and Persian merchants. The diver places the clamp on his nose, ties a rope round him and remains one to two hours(!) under water. He finds shells firmly attached between small stones and sand and pulls them off by hand or cuts them off with a special knife, and puts them in a leather bag which he has hanging round his neck. When he can remain below no longer, he shakes the rope; the man in the boat sees this, pulls him up, takes the shells, opens them and collects the pearls. The Sulṭān receives five of

each ḥml and the merchants sell the others, but the divers themselves have little profit as they are always in debt to the merchants for advances made them.

The pearl is the jewel *par excellence* and is distinguished above other jewels by the fact that it is *ḥaiwānī* and not *turābī*. Tīfāshī gives a very full account of the perfections and defects of pearls, their value, their various colours, the restoration of pearls, etc., while Dimishḳī tells us how mother-of-pearl (*'irḳ al-lu'lu'*) is obtained from the layers composing the pearl-shell. Valuable medicinal qualities are of course ascribed to the pearl. They are believed to be particularly effective in cases of palpitation of the heart or melancholia, they strengthen the nerves, cure headaches and, if dissolved in water and rubbed on the afflicted part, mitigate leprosy. They are dissolved with citron juice and vinegar.

A separate article would be necessary to treat of the rôle of the "pearl" in the titles of books, in poetry and in rhetoric; we must limit ourselves here to the natural history side.

DURRĀNĪ, one of the principal tribes of the Afghāns, formerly known as Abdālī (from an eponymic ancestor Avdāl). The name was changed by Aḥmad Shāh to Durrānī from his assumed title Durr-i durrān. For the history of the tribe up to this period see ABDĀLĪ and AḤMAD SHĀH, also AFGHĀNISTĀN pp. 168-169. The kingdom founded by Aḥmad Shāh is known as the Durrānī kingdom, but should more strictly be called Sadōzai, as the kings belonged to the Sadozai section of the great Pōpalzai clan of the Durrānīs, and their successors the Bārakzais are also Durrānīs. There are three principal clans in the tribe, viz. Pōpalzai, Bārakzai and Alakōzai. The Durrānī tribe occupies the country near Ḳandahār, southwards up to the boundary of Balōčistān, the valley of the lower Helmand, and of the Tarnak, Arghandāb and Arghasān, with Zamindāwar. The Āčakzais of the Khwādja Amrān range in the Quetta Pishīn district of British Balōčistān are a branch of this tribe, and the Tarīns of the same Province are nearly related to them.

The Durrānīs are a very large and powerful tribe, but no statistics exist as to their actual numbers.

DUSHMANZIYĀR. [See MUḤAMMAD B. DUSHMANZIYĀR.]

DŪZAKH. [See NĀR.]

DWĀ'IR (DAWĀ'IR) plural of DĀ'IRA "circle", a confederacy of families whose duty it is to give personal attendance on a native chief. Before the French conquest of Algeria, the name *Dwā'ir* was borne more particularly by four groups of families or tribes, encamped in the southwest of Oran, attached to the service of this town and its Bey. They were organised as a militia on a sort of feudal basis, and lived on the produce of lands granted them by the Turkish government, and on the booty won in expeditions against unsubjected tribes or those that refused to pay taxes. It must not be forgotten that, when the Turks arrived in the Maghrib, they found a country without any homogeneity and without the bond of a common nationality among its inhabitants. They had not to "divide to rule" as has sometimes been said, but had only to take advantage of the existing dissensions. This is how in spite of their small numbers they were able to rule such a vast territory. In each province of the regency, the tribes were divided into those that paid taxes and bore all the burdens and tribes who did not pay taxes but collected them and shared them with the ruling race. These tribes, the Dwā'ir Zmāla, Hashim etc., were also called *Makhzen* tribes (cf. the article MAKHZEN), but it was the Dwā'ir that attained special celebrity in Algerian history for a period. An individual soldier in this militia was called *makhzenī*.

Origin. The native legends on the origin of these tribes agree on one point, viz. that the Dwā'ir are descendants of the regular soldiers brought by Mūlāy Ismā'īl, Sulṭān of Fās to garrison Oran and the surrounding country during his struggle with the Turks (1701). This enterprise was a failure and resulted in the Turks enlisting these picked horsemen into their own service and they settled and had descendants in the land. The Dey placed a native family devoted to the Turks over them, the Boḥaithiya whose genealogy to the French conquest is:

Bashīr a-Boḥaithī

al-Mūfoḳ — Ismā'īl — 'Adda — Yūsuf

(sons of al-Mūfoḳ:) Muḥammad — Ismā'īl

(sons of Ismā'īl:) Ḳaddūr al-Kbīr — Muṣṭafā — Ḳaddūr al-Sghīr.

Bashīr the founder of this family was a famous fighter in the struggles between the Arabs of the valley of Shalif and the Turks. He belonged to the Ūlād Mas'ūd a section of the Ūlād Bū Bekr, a branch of the Maḥall confederacy. But having slain one of his cousins in revenge, he sought refuge among the Turks and enlisted in their army. When the Dwā'ir were organised, he was made Agha of this soldiery. On his death a certain Sharīf al-Kurdī succeeded him with Ismā'īl, Bashīr's son, as Khalīfa (lieutenant). On the death of Sharīf, Ismā'īl succeeded in command of the Dwā'ir and appointed Sharīf's son his lieutenant. The post of *Agha* of this famous body of men was henceforth kept in these two families. At the time of the French conquest, it was occupied by Muṣṭafā b. Ismā'īl, grandson of Bashīr; his Khalīfa was 'Abd al-Ḳādir b. Sharīf.

The organisation and duties of the Dwā'ir. The Bey of Oran had four Aghas under him, to represent him among the tribes. Two of these posts were reserved for the Dwā'ir, i. e. for the families of Bughīt al-Buḥaithī and Sharīf al-Kurdī and two for the Zmāla. These important offices were much sought after and were not granted without payment. At their nomination, the Aghas of the Dwā'ir paid to the Dīwān of Algiers the sum of 40,000 *riyāl būdjū* (about £ 2800) for the right of wearing the *gandūra*, a kind of uniform of office. The Aghas of Zmāla only paid 20,000 *riyāl būdjū* for the same reason. The Agha, while on active service, also paid a similar sum into the Bey's treasury every six months. The two Aghas relieved one another annually. Their armed men paid annually a trifling sum to the Bey's treasury, the "spur-tax", which relieved them of all other taxation. The Dwā'ir and the Zmāla had the sole privilege of collecting taxes in the extensive province of South Oran called the Ya'ḳūbīya which stretched from the neighbourhood of Mascara and the hills of Tlemcen to the Djebel Amūr. The taxes paid by the tribes of the Ya'ḳūbīya to the Bey through the intermediary of the Dwā'ir, consisted of slaves of both sexes, wool, sheep, sleeping-carpets, red leather for saddles, bridles, native boots (*temaḳs*), horse-covers, camels and the *lezma* (tribute in silver). Besides having to collect the tribute from the western part of Ya'ḳūbīya province, the richest part, the Dwā'ir had also to police the tribes of the west of Oran.

The Dwā'ir since the French conquest. The capitulation of Algeria in 1830 surprised the Turks of Oran and their Makhzen just when they had pacified through terrorising them, the tribes who had been agitated by the machinations of the Sulṭān of Morocco. The Arab tribes believing that Turkish rule was at an end, rebelled against it everywhere. The Sulṭān of Morocco seized the opportunity to attempt to get himself proclaimed sovereign by the people of Tlemcen and the whole province. The Bey Ḥasan of Oran, the Turks and Ḳulughli of Oran and Tlemcen and the Makhzen people seeing that the French government did not meet their advances, sought another way out of their difficulty. The Bey set out for the East. The Ḳulughlis of Tlemcen and the Makhzen tried to save the situation by relying on Mūlāy 'Alī, the khalīfa and nephew of the Sulṭān of Morocco, who had been sent in great haste to take possession of the province. The Agha of the Dwā'ir, Muṣṭafā b. Ismā'īl, was retained in his office and further received command of 100 horsemen of the Sulṭān's negro guard ('Abīd) to go into the Mascara and Mostaganem districts to proclaim the Sulṭān. But Mūlāy 'Alī, who was badly advised, did not know how to win the Ḳulughlis of Tlemcen to his side. He allowed his officers, greedy of plunder and deceived by the natives, to fall upon their allies the Dwā'ir, to plunder them and carry off their money and cattle. The Sulṭān of Morocco seeing his nephew's incapacity had to recall him. The celebrated Emīr 'Abd al-Ḳādir b. Muḥyī al-Dīn replaced him. The latter from the first endeavoured to get Muṣṭafā b. Ismā'īl and the other Makhzen to join in the holy war against the French. Muṣṭafā, then in preliminary negotiations with the French, would not move; his nephew Mazarī, on the other hand joined the Emīr. Henceforth their tribes were divided; one section followed Mazarī to 'Abd al-Ḳādir, while the other remained with Muṣṭafā. But General Desmichels having been appointed commander of the troops in Oran, the French advances ceased. 'Abd al-Ḳādir having summoned the tribes to a holy war in May 1833, the Dwā'ir and their chiefs came to take part. Muṣṭafā however, went his own way and received the same honours from his men as 'Abd al-Ḳādir did from the other Arabs. After their defeat, the Dwā'ir and the Zmāla with Muṣṭafā b. Ismā'īl, still held themselves aloof. To prevent them joining the French, 'Abd al-Ḳādir endeavoured to win them to his side. It happened that, to obtain the submission of the Angad, one of the tribes of the former Turkish Makhzen, the Emīr had been obliged to grant them certain pastures, claimed by the Banū 'Amer as their property. The latter enraged refused to pay the tribute they had previously agreed to pay. The Emīr sent Muṣṭafā b. Ismā'īl and his Dwā'ir against them. The Banū 'Amer submitted at once and the Emīr tried to stop Muṣṭafā. He was too late, for the Banū 'Amer had been annihilated and their chief killed. The quarrel that arose between Muṣṭafā and the Emīr, resulted in a series of Homeric combats. The Emīr was defeated successively at Hennaya and at Sikkak near Tlemcen; his undisciplined Arabs could not stand the unwavering charges of the Dwā'ir cavalry. He would certainly have been exterminated if he had not found help with the French, who did not properly understand his case. Before such an alliance, Muṣṭafā thought it prudent to take flight to Morocco and enter the Sulṭān's service. He sent the latter as a present the booty won from 'Abd al-Ḳādir, including a golden parasol presented to the Emīr by the Ḳulughlis. It was a difficult matter to restore peace but in the end the Dwā'ir submitted; Muṣṭafā refused to remain at their head and entrenched himself in the Meshwar (a fortress of the Ḳulughlis of Tlemcen which held out against 'Abd al-Ḳādir) with 50 Dwā'ir families. They continued to fight bitterly against the Emīr.

The Emīr 'Abd al-Ḳādir seeing that he would not succeed in subduing the Ḳulughlis, entrusted the siege of Meshwar to the Moors of Tlemcen, their enemies, and retired to Mascara where his headquarters were. The Dwā'ir and the Zmāla who had embraced his cause on the return of Muṣṭafā from Morocco and the futile reconciliation between the two chiefs, were placed under the sole command of al-Mazarī, the Agha of the Zmāla. But the latter were not long in seeing that the Emīr could not protect them against the French. General Desmichels after the occupation of Mostaganem in August 1833 carried off their families and their flocks to punish them for the support they had given his adversary. They were forced to come to beseech him to make peace and restore their families and property. The majority submitted and pitched their tents on their lands around Oran under the supervision of French troops. They were settled in Miserghin (September 1833). They elected as their chiefs, Ismā'īl uld Ḳāḍī and 'Adda b. 'Othmān for the Dwā'ir and Ḥādjdj al-Ūzī and Ḥādjdj Shaikh for the Zmāla. Since then they have always shown themselves faithful to France and fought with her troops even against their kinsmen who remained in the ranks of 'Abd al-Ḳādir (Tamzūra, 1834).

Suddenly the rising of Sīdī l'Aribī in the valley of the Shalif and of the Derḳāwī Sī Mūsā in the south against the Emir ʿAbd al-Ḳādir and the appointment of General Trezel to Desmichels' command, gave renewed hope to Muṣṭafā b. Ismāʿīl, the irreconciliable enemy of ʿAbd al-Ḳādir. In name of the Ḳulughlis of Tlemcen and the Dwāʾir he made overtures to the French general who, however, did not accept them. But these overtures enabled the French officers to begin relations which were later to be a source of great trouble to the Emir. The latter was not ignorant of these negotiations and, relying on the decisions of the ʿUlamāʾ of Fās forbidding Muslims to lend their aid to the Christians, he tried to win the support of the Dwāʾir and the Zmāla, either of their own free will or by force. Besides, the example of the latter was encouraging other natives to trade and negotiate with the French. In June 1835 therefore he sent to the two Makhzen tribes al-Mazarī, the Agha of the Zmāla who had remained faithful to him, to persuade the Dwāʾir and the Zmāla of the country round Oran to return to Mascara and to use force if necessary. Mazarī did not succeed in his mission; in his wrath he had his own nephew Ismāʿīl ūld Ḳāḍī, Agha of the Dwāʾir of Oran, thrown into chains and was about to hand him over to the Emir ʿAbd al-Ḳādir when his own Zmāla threatened to mutiny if he did not set Ismāʿīl free, which he did. Mazarī retreated just as the French, who had been warned, were setting out to pursue him.

On the 16th June General Trezel pitched his camp at Figuier, a few leagues from Oran, to protect the Dwāʾir and Zmāla who had declared against ʿAbd al-Ḳādir. There he received envoys from these two tribes and signed a treaty with them by which they recognised French suzerainty, placed themselves under the protection of France (art. 1) and entered her service as Makhzen troops (art. 7). This treaty provoked a declaration of war on General Trezel by ʿAbd al-Ḳādir.

Muṣṭafā b. Ismāʿīl was satisfied; he renewed his offers which were accepted by Clauzel, the new governor. He succeeded in obtaining French permission to undertake an expedition to relieve the Kulughlis of Tlemcen who were besieged in their Meshwar by the Moors of this town, who were partisans of ʿAbd al-Ḳādir (Jan.—Febr. 1836). He himself regained his rank as head of the Dwāʾir. Henceforth there was not a military expedition in Eastern Algeria in which the Dwāʾir and the Zmāla did not play a prominent part. Muṣṭafā himself, in spite of a wound which shattered his right hand in the battle of Sikkak (1837), never ceased to set an example of courage and loyalty to France to his tribesmen. After every battle he received some new distinction and when distinctions were exhausted, Louis-Philippe appointed him *Maréchal de Camp*. It was in this capacity that he took part in the Mascara and Tagdemt expeditions of 1841. In 1843 he took part in the capture of Smala from ʿAbd al-Ḳādir and, while returning to Oran with his Dwāʾir laden with booty, he was shot in the chest by an Arab as he was crossing the Flitta country. He fell dead on the spot; he was nearly eighty years of age. With his death the heroic age of the Dwāʾir and Zmāla came to an end, but they have continued to be loyal to the French authorities. Whatever may have been the personal motives that drove Muṣṭafā b. Ismāʿīl and his men to the side of ʿAbd al-Ḳādir's enemies, they nevertheless filled a glorious page in the history of Algeria.

(A. Cour.)

DWĪN, formerly one of the most important cities in Armenia, now an unimportant village south of Eriwān, a little above the ruins of Artaxata (Artashat), in Lat. 40° N. The etymology of the Armenian name Dwin, Syriac Dᵉwin, Greek Δούβιος (Procopius), Arab. Dabīl, is unknown; the forms Dovin and Tovin, which frequently occur, are wrong. The city was founded by the Sāsānid Khusraw II, who built it in 350 as the capital of the Persian section of Armenia. When, on the deposition of the last Arsakid, Artashēsh in 429, Persian Armenia was completely incorporated in the Sāsānid empire, the seat of the Persian government was transferred to Dwin; cf. above p. 437a. Under the Arabs also Dwin retained this position; throughout the Caliphate it was the capital of Muslim Armenia; see above p. 444b. In the middle ages the town had a large population and was celebrated for the cloths and carpets manufactured in it and the surrounding district (particularly appreciated were its purple carpets); see above p. 446b.

P. 21^{b}, l. 17 from below, read "437 (1045)" for "about 422 (1031)". — P. 89^{a}, l. 9 *et seq.*, delete the statement that Abū Ḥaiyān wrote a history of Spain. — P. 145^{b} ult., add: there is a full account of his reign and writings in al-Khazradjī, *History of the Rasūliyy Dynasty*, transl. by Redhouse, ii. 110—141. — P. 367 *et seq.* ARABIA, note that the coins on Pl. vii. are enlarged to twice their size. — P. 429^{b} l. 20, read "Areshqūn" for "Rashqūn". P. 459^{b}, add: T. W. Arnold, *The Preaching of Islam*, chap. v. — P. 519^{b}, add to Bibliography of AWRANGZĒB, S. Lane-Poole, *Aurangzīb*, (Oxford 1893); W. Irvine, *The Emperor Aurangzeb Alamgir*, in *Indian Antiquary*, 1911, p. 69—85. — P. 542^{a}, after l. 19 insert: AZOV [see AZAḲ p. 529^{a}]. — P. 543, BAALBEK; read "striped" for "stripped" in first line of 'Explanation' on plan. — P. 546^{a} l. 38, add: see also BĀNĪ and BAMĀ' ALLĀH. — P. 550^{b}, add to Bibliography: A. J. Butler, *Arab Conquest of Egypt*, (Index). — P. 579^{b} l. 22, read "1873" for "1843". — P. 595^{b}, add to BAIRAM KHĀN: His *Dīwān* has recently been published in the *Bibliotheca Indica* by Dr. E. Denison Ross. — P. 599^{b}, after BAIYŪMIYA, insert BAJAZET [see BĀYAZĪD, p. 684 *et seq.*]. — P. 696^{a} l. 5, read "1905" for "1895". — P. 712^{a}, l. 40. Add: H. H. the Nawab Sultan Jahan, *An Account of my Life*. (London, 1910). — P. 736^{b} l. 38, instead of "Barges etc.", read: Brosselard (*Journ. As.* 1876, i. 159—179; for the other view cf. Eguilaz, *Reseña historica de la Conquista del Reino de Granada por los Reyes Catolicos*, p. 74—78) wrongly believed he had found Boabdil's tomb in Tlemcen, but he really died in exile in Fās in 940 = 1533 (or perhaps as early as 924 = 1518). — P. 736^{b}, l. 10 from bottom, add: see also F. de Castro in a note to his translation of Dozy, *Historia de los Musulmanes Españoles*, ii. 431—436. — P. 784^{a} l. 38, add: a lithographed edition of Bukhārī's *al-Adab al-mufrad* in the recension of Aḥmad b. 'Abd al-Djalīl al-Bazzār (fuller than the corresponding chapter in the *Ṣaḥīḥ*), was published in Cairo in 1306 A. H. — P. 838^{b}, add to Bibliography: Eannes de Azurara, *Chronica d'El Rei D. João*, i. 3 (Lissabon 1644); Matthaeus de Pisano *De Bello Septensi* (*Ineditos de Historia portugueza*, i. Lissabon 1790 p. 7—57); Yriarte, *Sous la tente* (Paris 1853), p. 5—24; Moulliéras, *Le Maroc inconnu*, ii. (Paris 1899), p. 701—733. — P. 850^{a}, l. 19, read "Ho-Chou" for "Hsi-Ning-Fu". — P. 902^{b}, l. 3 from below and last line, read "דמשק" and "דרמשק" for "במשק" and "דרמשק". — P. 927^{a}, l. 14 from foot, read "Nu'mānī" for "Num'ānī". — P. 939^{a}, add to Bibl. of DENIA: do. *Mochéhid hijo de Yúsuf y Alí hijo de Mochéhid* in *Homenaje á Codera* (Zaragoza 1904), p. 411—434. — P. 1013^{a}, l. 8, read "DJAMBULĀT" for "DJAMBALĀT". — P. 1016^{a} l. 11, read "Tuch" for "Fuch". — P. 1036^{a}, l. 10 from bottom, read "*ḥā'ida*" for "*ḥaida*".
